Again: The scarcely formed kingdom of Central Italy (or whatever name it may ultimately assume) is menaced with disturbances on both its South-Eastern and North-Eastern frontiers, and this even before the amalgamation of its recently acquired Provinces is fairly carried out. Romagna, it must be understood, includes only about *half* the Adriatic portion of the Estates of the Church, terminating near Rimini. Now, the remaining or Southern portion of these Provinces East of the Appennines, usually called *The Marches*, are inhabited by a population similar in character to that of the Legations, and every whit as hostile to the Papal rule. Even now they are kept quiet with the greatest difficulty: they groan under and resent the lot which makes their brethren free citizens, yet leaves *them* slaves of Rome. It is more than probable that, as soon as the French forces evacuate Rome, the Papal troops will so misconduct themselves in these districts, already exasperated almost to the boiling point, as to precipitate an outbreak; and if, as is reported, the Neapolitan soldiers are to replace the French, such outbreak may be considered absolutely certain. The suggestion of employing these troops—if made, as rumoured, by the Emperor of the French—can only be explained on the assumption that his real object is to render this outbreak in the Marches inevitable, so as either still further to embarrass the Pope, or to embroil affairs in the South of Italy in order to give himself a pretext for renewed interference. The asserted appointment, with his sanction, of General Lamoricière to the command of the Papal troops, is scarcely explicable on any supposition whatever. It is true that the Orleanist or Parliamentary Party have always been disreputably remarkable for their dislike and distrust of the Italian Liberals, and some of them even for their adhesion to, and professed admiration of, the Papal Government;—but it is difficult to believe that so distinguished and honourable a member of that party as General Lamoricière has always been esteemed, should have sold himself either to the Emperor or the Pope. So we can only hope that the news of his nomination is not true. In any case, however, the peril is very great; for whether there be a voluntary insurrection in the Marches, or whether the Papal forces so behave there as to call forth the too vivid sympathy of their now free Romagnese brethren, or whether the principle of non-intervention be again violated by the entry of the Neapolitan troops, it will be almost impossible for the people and soldiers of Central Italy not to march to their assistance.

A similar peril threatens in the North. The Venetians are now suffering grievously under the Austrian yoke: they are nearly maddened by the combination of fresh severities and cruelties with the bitter disappointment of their recent hopes; and they earnestly stretch out their hands to Piedmont for sympathy and rescue. The moment the new Kingdom is consolidated, the pressure will be tremendous

pon Victor Emmanuel to aid them, both on the part of his ew subjects and his old ones. If he steadily refuses, he will ose much popularity and will encounter a degree of internal pposition which will greatly weaken his Government:—if in n evil hour he consents, or is dragged into the conflict in pite of all his efforts, he will find himself at the head of an ll-amalgamated and incomplete Kingdom, involved in a fresh var with Austria, in which France will either stand aloof, r drive her own hard bargain for assistance. Thus, both n its Southern and its Northern frontier the new Kingdom nay be forced to fight almost for its existence with Austria, he Pope, and Naples, and with no ally.

The case between Savoy and Switzerland is more immediately and obviously, if not more certainly, menacing to the peace of Europe. On this point, serious as it is, we need say little, for it is fully before the public and is in every body's thoughts. It is not very probable that the Emperor will consent to abandon his grasp on Chablais and Faucigny n deference to the uneasiness and remonstrances of the Great Powers of Europe. It is not very probable that these Powers, who are all specially bound by treaty, even where not specially interested, to maintain and protect the neutrality and independence of Switzerland, will be persuaded to consent to an arrangement which so seriously compromises both;—for there is no doubt in the mind of any one who knows the country that the possession of these Provinces gives not only the command of the adjacent Swiss Cantons,—viz., Geneva, Neufchatel, Pays de Vaud, and the Valais,—but also the command of the Simplon Pass and every facility for marching thence into or out of the Northern Provinces of Italy. The Emperor may make some concessions to the alarm and the protests of the other Powers, but as long as these are only in the form of promises and assurances they can avail little, and "material guarantees" or securities he will be loth to give. Those who suspect him—as who does not—of ulterior, if at present ill-defined, projects of aggrandisement, cannot fail to observe what advantages the military occupation of the Lake of Geneva will give him for carrying them into effect.

The only other difficulty and complication in our impending or menacing European relations which we shall mention is this. If the next move of this unquiet spirit is directed against the Rhine, as in all probability it will be, what is to be the process of resistance? and in what way can that resistance be made successful? We do not apprehend any open and piractical attack: the probability is in favour of some artificial demonstration of sympathy and desire for annexation being got up among the adjacent Rhenish Provinces of Baden, Bavaria, or Luxembourg, under cover of which Louis Napoleon may commence diplomatic or forcible encroachments. If Austria and Prussia were cordially united, and had the promise of the cordial and active support of England, we do not for a moment apprehend that any such scheme could succeed, even if it were then attempted. But two points have to be considered:—what is the prospect of a really united Germany? and what is the probability of the energetic and hearty co-operation of England therewith? In the first place, the smaller States of Germany are jealous of Prussia, and attached to Austria, and if Prussia alone were first menaced, might be lukewarm in the cause: we do not do Prussia the injustice to believe that this feeling would be reciprocated were the cases to be reversed. But the danger must be very obvious, immediate, and *common*, which would effect a real and cordial junction between the two great German rival Powers,—between whom the events of the Italian war have increased the normal coolness, and whom the French Emperor would use every contrivance to keep asunder;—and even were they sincerely to agree to make common cause as far as diplomatic agreement was concerned, how could they act together in the field cordially and efficiently? Who would command the combined forces? Would either army willingly fight under a general belonging to the rival nation? Would Prussian soldiers feel any confidence in chiefs who so frightfully mismanaged the Italian campaign? Would not the first battle or piece of strategy display the inherent weakness for active purposes of the Germanic Confederation?

In the second place, though England should be disposed most earnestly to second the efforts of Belgium and Prussia,—and of Germany if Germany were to become a really united Power,—the difficulty of our position would appear the moment we found ourselves fighting side by side with Austria. Such an alliance might approve itself to our statesmen—might even be wise, just, and necessary; but it would never be welcome to the English people. If Austria were again engaged in a war with France on behalf of German interests and the German frontier, Hungary and Venetia would assuredly be up in arms for their emancipation, either of their own motion or at the instigation of the French Emperor;—and in such a case our sympathy would go with them, and against the ally by whose side we were fighting;—and such divided feelings could not fail to sap our strength and paralyse our zeal. These sentiments would find echo in our Parliament, and would hamper the action of our Ministers. They would be known and well understood by Austria, and would naturally sow mistrust between us and her.

These difficulties, we may be sure, are perfectly well understood by Louis Napoleon, and give him an enormous advantage, which he will use to the uttermost. The plans and hopes of Russia in the East, he may so assist or promise to assist, as possibly to induce that Power to remain a quiet spectator of his proceedings in the West:—Italy is still and always on the brink of insurrection and war both in the North and in the South—a condition which he can any moment foster and irritate into an open catastrophe;—a fresh conflict with Piedmont would so occupy Austria as to make her almost powerless to resist him in Switzerland or on the Rhine;—as matters now and usually stand, a *cordial* alliance between England and Austria is almost impossible; and an honest and efficient junction of national forces between Austria and Prussia is scarcely less so. Meanwhile, all Europe is kept in hot water, and will remain so as long as he pleases. There is one remedy, and only one, that we can see. But it would be a most complete, permanent, and instantaneous one. *Let Austria at once resign Venetia on payment of an ample value, and restore to Hungary her ancient constitution.* She would by one stroke recover the affections and the cordial aid both of subjects who now abhor her and of allies who now stand aloof from her in irrepressible antipathy:—she would become as powerful as she was of yore:—Louis Napoleon, with all Central Europe against him, would be reduced to inaction and comparative impotence for mischief, and we might have peace and freedom and prosperity assured to us for many generations.

MR WILSON'S PLAN FOR A PAPER CURRENCY IN INDIA.

It is rather curious that we have received by telegraph the account of Mr Wilson's speech on the introduction of a Bill for the creation and regulation of a paper currency in India, just at the moment when his Minute, dated Meerut, 25th December, 1859, has been laid before Parliament. We do not in general lay long extracts from Parliamentary documents before our readers, and they would rarely thank us to do so. But, in the peculiar circumstances of the present case, we think our readers will, probably much prefer to read Mr Wilson's description of his own proposal.

He begins by explaining the advantages of a paper currency, and by alluding to some previous discussions which have taken place at Calcutta upon the subject. He then proceeds thus:—

"10. But in order to render paper, which has of itself no intrinsic value, a safe and useful substitute for coin, there are certain conditions which must attach to it. These may be thus stated:—

"First, The paper must be identical in exchangeable value with the coin it represents:

"Second, To be identical in value it should be identical in quantity with the coin which is displaced by its use, so that, in point of fact, the mixed currency of notes and coin would be of the same amount as if it were wholly of coin:

"Third, All the laws which would determine variations in the quantity of coin in circulation from time to time should apply equally to a mixed circulation of coin and paper; the latter not being an addition to the currency, but only a substitution of a portion of the coin which would otherwise be required:

"Fourth, In order that paper should perform all the functions of coin, it is essential that it should be a legal tender for all payments, except by the issuers, by whom it should be convertible into the coin it represents at the will and on the demand of the holder.

"11. In order to obtain all these conditions of a safe and secure paper currency, and to maintain its value at all times to the full of the coin it represents, and so to prevent depreciation, the great essential is that it shall at all times be readily convertible, on demand, at the will of the holder, into such coin, on presentation to the issuers of the paper.

"12. But it is not enough, and especially in a country like India, where the system is new and credit in such issues has yet to be created, that the convertibility of paper shall be professed or even enacted by law; it is needful that such a suitable reserve of silver shall be provided and maintained as shall ensure such convertibility at all times, and, moreover, that assets of an undoubted and available character shall always exist sufficient to represent the entire amount of such issues especially set aside and appropriated for that purpose. And it is worthy of remark, that it is exactly in proportion as such provisions are known to exist for the security of a paper currency that the circulation will be freest, and that least demand for conversion or payment is likely to be made.

"13. By maintaining at all times a fixed proportion of silver to the amount of notes in circulation, and convertible public securities for the remainder, not only is the immediate convertibility of any probable portion of notes likely to be presented provided for, and the ultimate payment of the whole specially secured, but a natural and self-acting limit is placed upon the amount of the circulation, a limit which would expand and contract according to the wants of the community, in the same manner and to the same extent as a purely silver currency would do.

"14. It will be readily admitted that, these conditions being attained, we should have a perfect paper currency, fulfilling all the legitimate advantages to be derived from so economical a substitute for coin, and, at the same time, perfectly secured against any of the abuses to which it is liable.

"15. Such being the case, it remains to be considered in what way these principles can best be applied in India; and these considerations will naturally be ranged under the following heads:—

"First, The agency through which such issues should be made:

"Second, The manner in which the essential securities and conditions laid down can be best applied, and the machinery necessary to secure their continuance and permanency:

"Third, The functions of the body entrusted with the issuing of such paper:

"Fourth, the denomination of the notes to be issued:

"Fifth, The securities to be taken against forgery.

"First, then, as to the agency through which issues shall be made. Paper money is issued usually either by governments or banks. The main objection to governments undertaking these functions is the neglect which has usually existed as to any strict regulations by which they could be bound to the necessary precautions for maintaining the convertibility of the note, and thereby placing such a limit upon the amount of issue as should secure its identity of value with the coin. The consequence of the absence of such a check has too frequently been to lead to over-issues and great depreciation of the value of the notes. As Sovereigns have too frequently not hesitated to tamper with their coin, by reducing its intrinsic value, so they have abused their power of issuing notes by making them inconvertible, but at the same time a legal tender. The two vices are similar in their character. Otherwise, and upon general considerations, it might fairly be thought that governments were the best agencies through which notes could be issued, as their credit may be supposed to be the highest in the State, and inasmuch also as the credit of individuals or of private corporations could hardly be made the basis of a legal tender. And no doubt this would be the case, provided any means could be discovered for placing an independent check upon the amount of issue, and of taking security for the maintenance of a sufficient metallic reserve to guarantee the convertibility of the note. The absence of such independent checks hitherto has led to the common practice of leaving the issue of notes to banks, public and private, although the functions of issuing notes is not necessarily part of the business of the banker. Very few examples, however, exist where an attempt has been made to give to such notes the character of a legal tender. This has necessarily resulted from the absence of any absolute guarantee which the State has taken for the payment of such notes. The private and joint stock banks in England Scotland, and Ireland furnish no security whatever for their notes, although by the Acts of 1844 and 1845 a fixed limit is placed upon the amount of their issues. Their notes are not a legal tender. In France, the Bank of France gives no security to the State, nor is there any attempt made to place a limit upon its issues, except that which arises from the condition that the notes shall always be convertible, and which, as long as that condition is maintained, will no doubt act as a natural limit. But no security is taken for the maintenance of a metallic reserve, or for the ultimate payment of the notes. Although, therefore, the question has often been raised before the Government whether the notes should be made a legal tender, it has, on these grounds, up to this time, declined to adopt the suggestion. In the State of New York, and in other States of the Union, notes are issued by all the banks, but by law they are compelled to deposit with a public department public stocks of the State or of the Union to the full amount of their issues, which are held as a specific security for the ultimate payment of the notes. The notes are convertible at pleasure by the banks, but no arrangement exists for ensuring the maintenance of a specie reserve for that purpose. When, therefore, those banks temporarily suspended payments two years ago, the notes fell to a slight discount, notwithstanding the fact that the State held security for their ultimate payment. The notes are not a legal tender. Indeed, it may be laid down as a rule to be strictly observed, that if notes are to be made a legal tender without any risk of their abuse, two conditions are requisite:—

"First, That a provision should be strictly maintained for sufficient metallic reserve to ensure the immediate convertibility of the notes at all times:

"Second, That there shall be absolute ultimate security for the payment of the notes.

"These two conditions for a legal tender paper money are somewhat inconsistent with the other business and obligations of banks. Banks of issue have a variety of claimants, depositors, holders of their drafts or bills of exchange, and note-holders. To set aside so large a portion of their assets in coin and securities as would be required to cover their note issues, for the particular use and security of one class of their creditors, would be to reduce the security of the others, and, in the event of failure, would lead to a direct preference to one class of creditors to the injury of the others.

"16. The nearest approach that has yet been made to the conditions I have laid down as necessary to secure a paper issue of legal tender is in the case of the Bank of England under the Act of 1844. By that Act a separation has been made between the two branches of the business of the Bank, the one being called the Issue Department, and the other the Banking Department. The functions of the Issue Department are only to issue notes for coin, or in the purchase of bullion, and to exchange bullion or coin in redemption of their notes. The functions of the Banking Department are those of a general banking business in all its parts. In theory and in practice, inside the walls of the Bank, the two departments are as much separated and as independent of each other as if they belonged to two separate bodies. In the Issue Department a certain proportion of bullion is always held regulated by law which secures the immediate convertibility of the notes, and the balance of the issues over that amount is represented by Government securities. There would, therefore, appear to be ample security both for convertibility into coin, and for ultimate payment of the notes which are constituted a legal tender. But there is this defect in the plan, which, however, in the case of the Bank of England, is of little consequence. The Bank of England as a whole, is a single corporation of proprietors, and however it may be able to make such separation of its functions yet it cannot by that separation, even under the direction of the Act of 1844, set aside and earmark any part of its assets for the sole benefit of a particular class of its creditors—the

note-holders. It is, therefore, undoubted that, notwithstanding the appropriation of the bullion and securities in the Issue Department to the notes, the whole assets of the Bank are in common liable to meet the demands equally of all the creditors of the Bank. In the case of so wealthy an establishment as the Bank of England, with a paid-up capital and reserve of profits amounting to about seventeen millions sterling, and whose transactions and positions are at all times so open to the public by means of their weekly returns, this defect in the application of the principle insisted upon can only be regarded as nominal. But it would be far otherwise were it attempted to create in India a bank of corresponding magnitude. In order to be profitable it would necessarily have to embark in all the ordinary business of banking, and, however prudently conducted, there would be all the early risks attendant upon commercial success: and it would be a long time before the same confidence could be reposed in it as there now is in the Bank of England. To make such a new bank, therefore, the instrument for supplying a paper currency of legal tender, it would be necessary to make an actual separation and appropriation of bullion and securities for the purpose, and not a mere nominal one, as in the case of the Bank of England. And such an actual appropriation of a large portion of the assets of a bank to one class of its creditors would be inconsistent with the just claims of others, and would be so injurious to the credit of the establishment as to be impracticable.

"17. But if the objections to a legal tender note circulation by banks generally are so strong, in India they become much more so. If it is desirable to establish in any country such paper money, it is essential that it should be of general use throughout, and issued under a single authority. We have only to consider how impossible it would be for any banking establishment to extend its agencies over the greater part of India, to see that no such bank could possibly fulfil the functions of conducting universally the circulation of notes.

"18. But, on the other hand, if there are special reasons why this function could not be performed by banks, there are very special grounds which point to the facility which the Government of India possesses more than any other government in the world for such a duty. In the great capitals of the Presidencies, and in many of the large emporiums of trade, little difficulty could arise, however the circulation might be conducted, but it is the Government alone that has agencies established in every part of India, however remote. Moreover, it is through these agencies in the collection of land and other revenues, in the payment of troops, in the purchase of commissariat stores, and in disbursements for the performance of public works, &c., that a great bulk of all the monetary transactions of a great part of India takes place; and therefore, whatever may be the currency in use, it is really constantly passing out of and into the Government treasuries.

"This fact alone would secure to notes issued by the Government not only the most extensive use, but their being available for payments of revenue would instantly establish them in high credit with the people.

"19. I have no doubt, therefore, that the only means by which a paper note circulation can be extensively applied to India, such as shall be universally current, and can be safely made a legal tender, is through the agency of the Government, and that it possesses means particularly favourable for the useful exercise of such a function.

"20. This brings me to the second head for consideration, the manner in which the essential conditions already laid down as needful to maintain the convertibility of the note at pleasure, and in any case its ultimate security, can best be applied. What we have to do is not merely to lay down theories which ought to be complied with, but also to erect a machinery as simple as possible for securing the practical observance of the rules necessary to give effect to those theories.

"In order to do this I would propose, in the first place, that the functions to be performed by the agency to be erected should be confined exclusively to those now performed by the Issue Department of the Bank of England; *i. e.*, to the exchange of notes for coin and bullion, and the payment of notes in coin or bullion, and in issuing orders for notes at one branch for bullion or notes received at another, on such conditions as may be fixed; and that it should undertake no other business of any kind whatever, either for the Government or for others. I see no advantage that could arise from employing this agency for the deposit of the public balances, while such a connection might endanger that perfect separation from the Government finances and expenditure which I hold to be necessary in order to maintain the complete integrity of the system. In order, then, to avoid any danger of the system being tampered with by the Government of the day, the duties connected with the issue of notes should be entrusted to officers rendered as independent as possible of the Executive Government. They might be appointed by the Governor-General in Council, but they should not be removable except by the Secretary of State; and their functions should be strictly defined by an Act of the Legislature, to which they should be bound to adhere, under heavy penalties.

"20½. The establishment which I would erect for the objects described would be in connection with the Mint. I would form a Currency Commission, composed of one Chief Commissioner, with whom I would associate the Master of the Mint and some other public functionaries,—the Chief Commissioner being the acting officer for the management and issue of notes, while the others should form only a check upon the conduct of the department, upon the reserve of coin to be maintained, and upon the stock of notes in hand, in the same way that certain public functionaries at all our commissariat stations exercise a check upon the chest. Deputy-Commissioners would be appointed, one for each currency circle into which the country would be divided, in the manner hereafter described, with whom would also be joined certain other public officers who might be found at the station, whose duty it would be periodically to check the balances of cash and notes of the local issuing department.

"21. The business of the Commissioners in Calcutta should be:—

"First, To manufacture all the notes required, not only for their own district, but also for the whole of India. For many reasons, which is not necessary to refer to, it is essential that all the notes should be made at one place, but, following the practice of the Bank of England, the notes intended for the use of different provincial circles would be dated from the centre at which the bank of issue of the circle would be placed. As, however, the numbering and dating of the notes is a separate process of printing, the whole stock of the half completed notes would be available to be completed for any circle as they might be required from day to day:

"Second, To exchange with the Treasury and with private persons, on demand, notes of the district for coin, and coins for notes of the districts:

"Third, To purchase silver bullion and foreign coin at the fixed price per ounce, thus giving the importer of silver the opportunity of converting his silver at once into money, and avoiding the inconvenience such as was recently felt at Bombay, when money could not be obtained for silver, simply because the Mint could not turn out coin sufficiently fast; this would be giving to the merchants in India a similiar facility for disposing of their silver at once for notes or coin as the London merchant possesses of disposing of his gold to the Bank of England:

"Fourth, To supply from day to day the demands of the local issuing banks with notes, keeping accounts with each:

"Fifth, To purchase and hold public securities, to whatever extent should from time to time be deemed advisable, and which should be in conformity with the regulations laid down by law:

"Sixth, To give orders upon district issuing banks for notes in exchange for coin, or in payment for Calcutta notes, on terms to be stated and published monthly."

Although this scheme is, we believe, essentially sound, and quite sufficient to secure the convertibility of the paper currency for India, it certainly is not in accordance with the technical provisions of the Act of 1844. Under Mr Wilson's scheme, one-third of the circulation is to be kept in bullion, and the rest, or as much of the rest as is deemed expedient, is to be invested in securities. The securities are, therefore, a variable quantity, and are to be extended from time to time. Under the Act of 1844, on the contrary, the securities are an *invariable* element; the amount of them was fixed by Sir R. Peel. It can only be changed by an

Act of Parliament. It was not to be expected that this difference should escape the eye of Sir C. Wood, the chairman of the committee upon the result of whose investigations the Act of 1844 was founded. Nor has it escaped him. He observes :—

"12. Another of the duties of the Commissioner at Calcutta is described in the Minute, as 'to purchase and hold public securities, to whatever extent should, from time to time, be deemed advisable, and which should be in conformity with the regulations laid down by law.' These expressions may convey an impression, which I am well assured, is not Mr Wilson's meaning, that the Commissioners might become constantly purchasers and sellers of Government securities.

"13. The sound principle for regulating the issue of a paper circulation is that which was enforced on the Bank of England by the Act of 1844, *i. e.* that the amount of notes issued on Government Securities should be maintained at a fixed sum, within the limit of the smallest amount which experience has proved to be necessary for the monetary transactions of the country; and that any further amount of notes should be issued on coin or bullion, and should vary with the amount of the reserve of specie in the Bank, according to the wants and demands of the public.

"14. The important condition is thus realised, that the mixed currency of notes and coin should vary in quantity exactly as if it were wholly of coin.

"15. In this country, the smallest amount of notes required had been ascertained by long experience; but what that quantity may be in India, can only be ascertained in like manner; and as it is impossible, at present, to say what the minimum amount of notes in India will be, the proceedings for determining this point must necessarily be tentative and experimental."

Nothing is more curious than to observe the constant recurrence of the same points in controversies on the currency. We see in these paragraphs respecting India the same arguments which we have so often heard respecting England. As it is left by Sir C. Wood, the matter is not very clear. But we apprehend that the only practicable course is to adopt Mr Wilson's scheme for the present just as he has proposed it. When it has been introduced for a considerable period, the minimum to which the Indian paper currency will ever be reduced may be ascertained, and the invariable amount of securities to be retained in the Issue Department may be fixed with reference to it. But, until the scheme has been long in operation, this will be impossible; and, therefore, Sir C. Wood proposes to proceed tentatively and experimentally, and to suggest no alteration in Mr Wilson's scheme for the present.

SOME FALLACIES ABOUT REFORM.

In spite of the small amount of hearty assent to the principles of the coming Reform Act amongst statesmen, and the small amount of active enthusiasm on the subject in the country, it might have been predicted some years back that the agitation for Reform would probably succeed. The whole Liberal party have, since the agitation for the first Reform Bill, been committed to one or two leading fallacies on the subject of Parliamentary Representation, which they are now merely following out to some of their logical consequences.

It was a favourite doctrine thirty years ago, that the suffrage was to be extended downwards till it had arrived at the lowest class who had, what was called, *sufficient intelligence* to exercise it. That is to say, that there is a certain minimum amount of reading, writing, and arithmetic, which just suffice to entitle a man to be a voter, and that all men who equal or exceed that limit have a natural and inalienable right to an equal voice in the government of the country. This fallacious proposition gained acceptance perhaps through another fallacy,—namely, that the opinion of a majority is more likely to be correct than the opinion of a minority, which is true only when the whole are in the same position with regard to the interests at stake, and also have the same means of judging,—that is, in the case of politics, when they have the same amount of political intelligence, judgment, and knowledge. In any other scientific question, no one would think of arriving at a decision by the votes of a majority of a body composed of the highly skilled, the moderately skilled, and those who had merely acquired the rudiments. Why the science of government and legislation should have so different a treatment, it is impossible to see. Moreover, in any other practical matter no one would think of arriving at a decision by the votes of a majority of a body representing only a one-sided interest in the result of the decision. Yet, when you throw the whole of the legislation of a country into the hands of a single class, you deliberately provide for a partial decision,—and, in the present case, for partiality *un*modified by high intelligence.

The wide acceptance that this latter majority-fallacy, as it may be called, has obtained, can only be accounted for by the unconscious adoption by the reasoner of a third fallacy,—namely, that representative or constitutional government is founded upon some natural right of the governed to assent to the form of government under which they live. In a monarchy, whether constitutional or otherwise, it is of course absurd seriously to advance such a proposition, as neither the Crown nor the House of Lords, as parties whose assent is necessary to any new legislation, could stand before such a test. Therefore, merely to state the doctrine is a sufficient refutation of it to all but advocates of a democratic republic. But even the advocates of a democratic republic, if forced to work out their theory of natural right, would in the end be driven to abandon it, or to take refuge in fresh fallacies, for the assent of a majority of adult males is not the assent of the whole people. It is, however, necessary to admit, that the doctrine of a government according to the will of the majority of adult males in a nation being founded on natural right, is the least obviously illogical of the fallacies we have noticed; for it is, at all events, the best attempt at working out the idea of the natural right of the governed to assent to the government under which they live, and an attempt which fails only from the obvious absurdity of counting the voices of women and children. For this reason the doctrine of universal and equal suffrage is, in fact, more tenable than any of the other fallacies we have noticed, and on this ground it is that we assert that the present Reform Bill might have been predicted from the opinions advocated by the Liberal party during the last thirty years. In the same way, it may with equal certainty be predicted that the lowering of the suffrage cannot stop at the present Reform Bill, or at any point short of universal suffrage, unless sounder ideas on the theory of representative government are adopted by the thinking classes, and *bonâ fide* introduced into the constitution. The arbitrary drawing of the line of minimum intelligence at the 6*l* householder can no more be permanently sustained than the placing the same limit at 10*l*. The adoption of any such arbitrary line, coupled with the equalisation of all grades of intelligence above the limit, is utterly indefensible upon any theory :—it is not a government by the most educated and intelligent; or all grades of intelligence would not be placed upon a level :—it is not a government by classes; for all classes above the limit are placed upon an equality :—it is not a government by numbers; or there would be no such limit :—and, finally, there is little reason to suppose that the intelligence of the householders between 10*l* and 6*l* is in any respect greater than that of the additional body of voters who would be admitted by universal suffrage. A position logically so weak, must therefore give way before even a feeble assault. It was easy for the advocates of extended suffrage to say that the limit of 10*l*,—proper enough, perhaps, when the first Reform Bill was passed,—has become too high, now that education has been so much extended. And it will be equally easy and equally unanswerable to say the same of the 6*l* limit some 20 years hence; and, inasmuch as the appeal will be made to a now extended and lowered constituency, it will, probably, find a still more ready acceptance. And the ultimate certainty of this third Reform Bill is scarcely attempted to be denied by the advocates of the present Bill, of which the favourite defence is that it will probably last 25 or 30 years!

There is still another ground, however, on which the advocates of extended suffrage are strong, and the supporters of the present system are weak,—namely, the cry,—or supposed cry, which for electioneering purposes does nearly equally well,—of the unrepresented for political rights; an argument supported by a formidable array of figures showing

the smallness of the number of the present electors as compared with the total population. The logical inconsistency, therefore, of adhering to a limit of lowest intelligence fixed when the state of popular education was different, and the Englishman's laudable desire to extend to others the same political rights which he himself possesses, have inevitably led to the present Reform Bill, and, moreover, must inevitably lead to another and another of the same character, in the absence of the adoption of some principle that shall harmonise our constitution with some sound theory of representative government, and at the same time do away with the outside pressure, at present chiefly imaginary, but which may hereafter become a reality, of an unrepresented mass, by taking them within the pale of the constitution.

There is, however, one cheering element in the success of the present Reform agitation,—namely, that though arising from fallacious reasoning on the part of the Liberal party, it has arisen from reasoning, and not from passion or interest; the interests of the great middle class, without whose practical assent the Reform Bill could never pass, being, in fact, opposed to an extension of the suffrage, the effect of which is to take so large an instalment of political power out of their hands. If, therefore, the English nation can once be persuaded that the suffrage now about to be adopted is not founded upon sound principles, there is still hope that the false step about to be made may be remedied. Retraced, strictly speaking, it can never be, nor is it necessary that it should. For it by no means follows, because a numerous but little instructed class cannot be admitted to an equal voice in the government with a less numerous but better informed class, without disastrously lowering the character of the whole, that the most numerous class in the State must be altogether excluded from the government. The only refuge from democracy is not a restricted constituency, which may be called a mild form of oligarchy. If the notion of an equal voice to every voter be once abandoned, it would become possible to take in even a much larger body than are now about to be admitted into the constituencies, without the slightest risk to the constitution. It is easy to reply to this proposal, as is constantly done, that the people will not suffer it, and that the unrepresented classes about to be enfranchised would not accept such a suffrage as a concession of their claims. However much this answer might have imposed upon people a year ago, it is now abundantly clear that there is no such paramount popular feeling to check our adoption of that which the present governing classes may on any account accept as the most just and soundest form of representative government. Having adopted extension of the suffrage as a logical conclusion from mistaken premises, it is being carried indeed, but carried without a particle of enthusiasm, as a foregone conclusion which all men are weary of discussing. Had we a race of statesmen to lead us, we might have been saved from this great error, and public opinion might have been gradually educated till the adoption of some of the many different modes by which the representation of classes in some reasonable proportion to their intelligence and capacity for governing (in place of a mere numerical rule) might have been secured. Let the possibility, however, of such a result, even after the passing of the Reform Bill now before the House of Commons, not be altogether despaired of. There is a vast fund of good sense and public spirit in the English people, and let them once be persuaded that a system which gives to the workpeople of a single large contractor or manufacturer a voice in the constitution equal to the united voices of all the merchants in the Royal Exchange, is not only unsound in itself, but is not the only available means of giving the working classes any voice in the constitution at all, and there will yet be hope of modifying our constitution on a basis that shall endure for ten times the period for which the new Reform Bill is warranted to secure peace and quietness to the Government.

MR WILSON ON THE AMOUNT OF THE INDIAN DEFICIT: ITS REAL CAUSE AND ITS TRUE CURE.

(Extract from his Budget Speech on 18th February.)

I HAVE confined my observations to the period that has elapsed since May 1857. Are we to take that as a standard to which we should aim to arrive? Even if we could do so with regard to the Army, you must bear in mind that I have already shown you that, in the last three years, the interest of the debt has increased in round numbers by 2,000,000*l*; and there are other increased charges beyond our control. But even were this otherwise, and even if it were possible that we should be able to regain the standard of 1857, would that be wholly satisfactory? We have a deficiency of upwards of 30,000,000*l* in three years, but is that a new state of things? Sir, I hold in my hand a return showing the deficits and surpluses of Indian Revenue as a whole in India, and at home since 1814 down to 1860, and what is the result? The period embraces forty-six years: of that number we had a surplus in thirteen years amounting on the whole to 8,895,437*l*, a sum not equal to the deficit of the present year, and we had deficits in the remaining thirty-three years amounting in the whole to the large aggregate sum of 72,195,416*l*—thirteen years of surplus at an average of only 684,264*l* a year, thirty-three years of deficit at an average of 5,540,000*l* a year. Nor was this state of things peculiar to the earlier part of the period to which I have referred. Taking the return only from 1834, when the management of India became purely governmental, we have a period of twenty-six years: of these the finances of India were in surplus only for seven years, while in the remaining nineteen years they exhibited large deficiencies. Again, Sir, I find by a return to Parliament in the last Session, that of the fifty-nine years which have elapsed in the present century, in no fewer than forty-four of those years have considerable, often large, additions been made to the Indian Debt, while in fifteen only have diminutions taken place; so that the normal state of Indian Finance may be said to be deficiency of income and addition to debt. Shall I ask, if that is a satisfactory state in which the finances of a great Empire should remain? Is that a condition to which we should be content to return? Sir, all who have the honour, dignity, and future security of India and of her teeming population at heart, will emphatically answer—no.

We have a grave conjuncture of affairs to deal with. I think you will already begin to perceive that the evil is deeper and broader than at first it appeared. I think you will begin to see that our task will be heavier, and must extend to great questions of administrative reform, as well as to immediate questions of finance. You will, therefore, I am sure, pardon me if I feel it to be my duty to the best of my ability to unbare before you the whole extent of the evils as they present themselves to my mind. Sir, I sincerely trust that, in the free observations which I feel compelled in the performance of my duty to make, I shall be understood not to reflect unfavourably either upon any individual or upon any class. It is to the system, and the system alone, that I refer. Nay, I will say more. It has been a matter of surprise to me that, with so defective a system, greater evils have not arisen, and that they have not, I attribute only to individual zeal and care. It is, Sir, with that system we shall have to deal, with a system under which in thirty-three years out of forty-six we have suffered a deficiency in our finances at the rate of 5,500,000*l* a year, and amounting in the whole to 72,195,416*l*, under which we have now a deficit in the present year of upwards of 9,000,000*l*, and a prospective deficit in the next year of about 6,500,000*l*, under which our debt has increased in three years by upwards of 38,000,000*l*, and the annual charge upon it by about 2,000,000*l*. That is the price the Mutiny has cost the people of India. It cannot be repeated too often.

But, Sir, there is one point upon which I must remark. Until we have one central point of responsible control of Army finances, as of all others, established, it will be in vain to expect great reduction. Our first course must be to consider carefully what force is sufficient, and not more than sufficient. Our next point must be to have carefully revised estimates, what is here improperly called a Budget System, for military and all other charges, submitted to the Supreme Government annually, as they are in England to Parliament, to sanction only what is necessary, and strictly to keep every province and every department within their limits. Till you have this central financial and revenue control, it is in vain to look for economy;—when you have it, you may safely give

much greater executive responsibility to local authority. Sir, in England there is more local government than in any country in the world; but there is no country where the central authority and control of the Government itself is so strong. And, I will add, that it will be in vain that we make improvements and reforms in our finances, if these administrative reforms do not take place. You must rely upon a sound system if you will have permanency, and not upon any individual, especially in a country where individuals change so rapidly. Sir, this is nothing new. You have had Finance Commissions over and over again. What have they done? In looking over the archives of the Government of India, I must say, that the minutes left on record of no Governor-General have struck me with more force than those of Lord Ellenborough, and they have induced me to regret that his stay in India had not been longer. That noble Lord is a distinguished member of a great party, always opposed to that with which I have had the honour of acting, and my testimony may therefore be regarded as impartial. Sir, that noble Lord saw and understood the evil of which I speak: he warned the Court of Directors of it. On the 7th of August, 1842, he wrote as follows:—

But I cannot hold from the Honourable Court the expression of my decided and long formed opinion, that whatever diminution may be made by my exertions in the amount of expenditure will only be of a temporary character, without an entire change in the financial department, and some very material modification of the system of carrying on the Government. There is now no one officer charged with the duty of viewing the expenditure of the State as a whole, and of considering every proposed or existing item of charge, not by itself only, but with reference to the total charge upon the revenue.

Without this concentration of duty and authority in a really responsible officer, I have no hope of giving permanence to the influence of economical principles in the financial administration of India, or of even dealing satisfactorily with the details of expenditure.

Sir, this is exactly what I would say now. No doubt an attempt was made, but most feebly, to supply a remedy. A financial department was created, I think, in 1843 or 1844, but without any real power or responsibility. Sir, you cannot exact responsibility without giving power, and you ought not to give power without exacting responsibility. Will it be credited that the officer who had to administer the finances, was confined to the disbursement of public money, without either power or even cognisance in any shape of the revenues by which the treasury was to be supplied. Sir, we are now engaged in applying a remedy to this anomaly. In order to show how much our army expenditure is capable of reduction, I have only to compare the expenditure of the current year with that of 1856-57, for army, military police, new levies, police and military public works. The cost in the last four years for all India was:—

	£
1856-57	13,213,454
1857-58	17,215,674
1858-59	24,717,638
1859-60	21,732,681

THE ANGLO-FRENCH TREATY.

THE following communication from Her Majesty's Government has been forwarded to the different Chambers of Commerce relative to the working of the Commercial Treaty with France, in order that they may be put in possession of any facts that may make the measure more perfect, and at the same time be in accordance with the practical views of the manufacturing interests of this country:—

Office of Committee of Privy Council for Trade, March 24, 1860.

Sir,—I am directed by the Lords of the Committee of Privy Council for Trade to request that you will inform the Chamber of Commerce of that, with a view to negotiations which are in progress for the purpose of arranging the details of the new French tariff of import duties upon the articles of the produce and manufactures of the United Kingdom enumerated in article first of the treaty of the 23d of January, 1860, they are desirous of obtaining any information which the Chamber may be able to supply in connection with the branches of the British exportation trade in which that body is more especially interested. These are the three questions in regard to which my Lords more especially desire accurate and detailed statements at the earliest convenience of the Chamber:—

1. As to the classification which, in its opinion, it would be desirable to adopt in respect of such manufactures with a view to the arrangement of specific duties by weight in the French tariff.

2. As to the average prices of each class of such manufactures with reference to such classification.

3. Upon what description of each class of goods it is more especially important that the duties should be reduced below the *maximum* of 30 per cent. *ad valorem*, whether such duties should be charged *ad valorem* or the *ad valorem* rate be taken as a basis on which to assess specific duties, and upon what special grounds such reductions are important.

In reference to the second head, I am to observe that the 13th article of the treaty with France of the 23rd of January, 1860, provides that the average price of the articles of British produce and manufactures enumerated in the treaty during the six months last preceding its signature shall be taken as a basis in fixing the amount of the import duty upon them; my Lords would, therefore, desire to be furnished with a statement of such average prices during the period therein mentioned; but they would be glad at the same time to obtain a similar statement of such average prices during each of the three years immediately preceding the date of the treaty. I am to add, that my Lords will be happy to receive any statement or suggestion with regard to the branches of trade represented by your Chamber which that body may think likely to be of use to Her Majesty's Government in the present negotiation. I am, in conclusion, to state, with reference to a desire which has been expressed in certain quarters, that deputations should be sent to Paris on the subject of the treaty, that my Lords would suggest for the consideration of the Chamber of Commerce of ——— whether it may not be possible and desirable that a delegate might be selected from each branch of the industries with which the Chamber is connected to represent the common interest of such particular branch, and to proceed, if it be necessary, to Paris, to supply any information on the spot which may be required in the negotiations of the French tariff.—I am, Sir, your obedient servant,

JAMES BOOTH.

To the Secretary of the ——— Chamber of Commerce, ———.

At a meeting of the Council of the Chamber of Commerce, held at Birmingham, on Wednesday, the following reply was agreed upon to the above questions submitted by the Board of Trade:—

1. This Chamber considers that the duties upon half-manufactured articles—such as iron and steel; iron, steel, brass, and copper wire; brass and copper sheets; iron and brass tubes for boilers, steam, and gas, &c.; and tin plates—should be levied by weight; and that the duties upon all articles entirely manufactured should be taken *ad valorem*.

2. This Chamber is unable to give the average price of the manufactured articles known as "hardware." The goods are so varied, and the qualities of each single article so numerous, that any approximate calculation would be of little assistance to my Lords; for instance, brass locks, which are made from 9d to 180s per dozen and upwards; steel pens, from 1½d per gross to 13s 6d and upwards; fire irons, from 10d per set to 20s and upwards; plated candlesticks, from 4s per pair to 80s and upwards; japanned tea-trays, from 8d per dozen to 80s and upwards. Numerous other articles might be mentioned as further illustrating the impossibility of affording any information to my Lords on this subject.

3. This Chamber is of opinion that the French treaty will be of little benefit to the manufacturers of Birmingham in the event of a duty at all approaching 30 per cent. being levied upon manufactured articles, as such a duty would afford the French manufacturer a protection which would prevent the importation into France of most of the leading articles of this district.

Upon the articles known as hardwares, this Chamber is of opinion that moderate duties, such as those levied by the neighbouring countries of Belgium and Holland, would greatly benefit the trade of this locality.

This Chamber is of opinion that upon the articles enumerated in their reply No. 1, the following should be the *maximum* duties, viz.:—

Wire, iron, 6f per 100 kilogrammes; wire, steel, 10f ditto; wire, copper and brass, 10f ditto; copper and brass sheets, 10f ditto; tubes, iron, 10f ditto; tubes, copper and brass, 15f ditto; tin plates, 6f ditto.

The duty on iron, as stipulated in article 17 of the treaty, although considered by the manufacturers of this district as too heavy, will still allow the import of certain best brands, though probably only to a very limited extent.

In conclusion, this Chamber begs to direct the attention of my Lords to the fact that though an abolition of total prohibitions in the French tariff may benefit a few isolated branches of the manufactures of this district, they cannot forbear comparing the tariff of Belgium with that proposed by France, as they find, with much lower duties levied in Belgium upon articles known as "hardware," the demand for the products of this locality is exceedingly limited, and with an *ad valorem* duty of 30 per cent. this Chamber feels convinced that the advantages Birmingham and the neighbourhood would derive from the new French tariff would prove exceedingly limited.

With regard to the suggestion of my Lords that deputations should be sent to Paris on the subject of the treaty, the Council of this Chamber are of opinion that the branches of the trades represented by them are too numerous to admit of the suggestion being carried into effect. The Council has, however, appointed a sub-committee to consider the questions referred to by my Lords, and the committee will have much pleasure in affording any further information which may be required by them in the pending negotiations.

ERRATUM.—In our first leader, last week, at the bottom of the 2nd column, 2nd page, *later* was erroneously printed for *earlier*. The passage should run thus:—"To tax the *later* stage of manufacture more than the *earlier* is to give a protection to those who are engaged in the later stages."

THE REVENUE.

Agriculture.

CROPS AND PROSPECTS.

After passing through a winter of such an unusual character, and during which the fluctuations and changes of weather and temperature have been so unfavourable to vegetable life, a few notes on the present aspect of the crops and the prospects of agriculturists will not be inappropriate. The commencement of very severe frost in the middle of October, followed almost to the present time by continuous alternations of short periods of sharp frosts and heavy rains, present a combination of phenomena not often known. We have had seasons more wet, we have had as intense and much longer continued frosts; but no one recollects, nor is there any recorded account of any winter during which so much and such severe frost has been accompanied, we perhaps should say alternated, with so much and such heavy rain. Some of the consequences of this state of things are remarkable. Early in the season a good deal of mangold wurtzel was destroyed by the October frosts, many of the growers being then engaged in the work of storing it, and had left large quantities in the field pulled up ready for carting, and such roots were in a great measure destroyed. Others, notwithstanding the frost, continued to store their roots, and these have, as might be expected, rotted in the clamps. Where, however, the mangold was allowed to remain untouched until the frost had gone off, and the succeeding rains had somewhat subsided, the crop was stored in good condition and has kept well. The crop, too, having been very large, and the breadth grown greater than heretofore, there has been an abundant supply of this provender throughout the season at about the ordinary price. This is the more fortunate, the turnip crops, usually left in the fields, having been so greatly injured during the winter as to leave the farmers at some loss for provender, especially for their sheep. The drafts on the haystacks have in consequence been uncommonly heavy. The effect of the season on the wheat crop has been still more remarkable. The October frost and the succeeding wet weather interrupted wheat sowing to a greater extent and for a longer time than any such interruption which has taken place for many years;—so much so, that farmers who had got in any considerable portion of their seed wheat congratulated themselves on their superior good fortune as compared with their less forward neighbours. In December, however, an interval occurred during which considerable breadths of wheat were sown, but the seed generally remained in the ground till February without making its appearance, and so much rain fell during that time that many uneasy apprehensions were expressed as to its ultimate appearance. The result, however, according to present appearances, seems to be, that the latest sown wheat is the most promising. The early sown is thought to have lost plant too much to be capable of yielding a full crop. We believe such apprehensions to be premature, for if we have a genial spring, the plant may so gather and spread as to show no deficiency at harvest, and it is certain the late sown wheat crops are full of plant and thriving. Beyond these there is much land intended for autumn wheat which has been either sown with spring wheat or barley. The most observing farmers, therefore, calculate on somewhat higher prices for wheat as a consequence of the smaller breadth sown than the average of this country. And the recent advance of price seems to justify that opinion. We may note that vegetation is generally very backward in the meadows and gardens as well as in the wheat fields. The spring corn has gone in well. Notwithstanding the large falls of rain, and the complete saturation the land has from time to time undergone, the soil has worked well, and the seed has been deposited in a kindly bed. The unusually dry state of the land for two or three preceding years will probably go far to account for this condition of the soil.

The agricultural report for March of the *Mark Lane Express* says:—"The backward appearance of the young wheats has, in many instances, given rise to unfavourable reports in reference to the prospect of the next yield; but at present we see no reason why a short crop should be anticipated as the result of a backward spring, because, as far as we can ascertain, no actual damage has been sustained by the winter wheat." The South Lincolnshire reporter of the same paper says the season for putting in the spring crops has been one of the most satisfactory they have had in that district for some years. The Warwickshire report to 31st of March admits that in that country

the wheat, "until about ten days ago, did look bad, and was very backward," but since that time "it has fast recovered its looks, and is now growing fast," though many farmers have had to fill up the blank places in the rows with spring wheat. The land is here, also, said to be in a fine state to receive the barley. The Essex report says that the wheat has altered greatly for the better during the past month, and especially so on the light lands, though hitherto the strong-land wheats have looked the best.

The chief point, however, on which the agricultural mind is now most anxious, is the provision for live stock. Turnips have proved greatly deficient, and both flocks and feeding beasts are necessarily carried on at much greater cost than in ordinary seasons; in consequence all are desirous of selling fat stock with as little delay as possible. This may occasion a temporary depression in the meat markets, which have hitherto been well sustained, but so great is the demand from the flourishing state of trade that no serious fall is to be apprehended in the price in this most important part of the farmer's produce. The flocks are the source of more embarrassment. The Lincolnshire report before referred to, after complaining of scarcity of food for stocks, says:—"Sheep are suffering most, their chief dependence being upon cut chaff from oats, or oats and pea-straw, with cake and corn; altogether a very expensive course of keeping." Some accounts speak of the appearance of the foot and mouth disease amongst the cattle, and it is said to be virulent.

CROSS-BREEDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I beg a small portion of your space to offer a few comments on parts of an article on cross-breeding, which appeared in your number of March 10th, and to which my attention has been called by a friend. I ask this with the more confidence, as my name, principles, and practice are prominently introduced and freely discussed in the article alluded to.

I beg leave most fully to coincide with and to thank you for the clear and able distinction you have drawn between cross-breeding as a means of producing an animal for the butcher, and the butcher only, and adopting the same system as a means of *perpetuating* a breed of animals, and most fully endorse your reprobation of the latter practice. You have demonstrated the fallacy of it so completely that I need not reopen the question; but when you proceed to adduce my flock as bearing on the subject, the assertions show such an imperfect acquaintance with its history and the principles that have guided me in the management of it, that I must offer some explanations. To refresh the memory of the reader, I will transcribe the passage. "He [Mr Spooner] cites the Leicester flock of Mr Valentine Barford, of Foscote, near Towcester, as an instance of pure breeding, and says that gentleman 'has the pedigree of his sheep from the days of Bakewell in 1783 to the present time, and from 1810 he has bred entirely from his own stock, without any interchange of male or female from any other flock.' And Mr Barford rather prides himself on breeding from the nearest affinities. Though his sheep are small, they have not lost any of their fecundity which is supposed to result from in-and-in breeding. But it is a mistake to note this as an instance of *pure* breeding, for Mr Barford neglects the advantages offered to him by his fellow-breeders of Leicester sheep *for the sake* of preserving purity of descent from a particular flock, that of the original improver Bakewell. Surely some credit might be given to subsequent improvers of Leicesters, &c."

Sir, I do not "*pride* myself on breeding from the nearest affinities." It is true that half a century of experience has convinced me, where two nearly-related animals are true in form, sound in constitution, and I am sure that they have no hereditary tendency to disease, in-and-in breeding does not induce degeneracy, and therefore I have no hesitation in coupling them. In fact, I think relationship is a consideration of much less importance than form and constitution.

Nor do I "neglect the advantages offered to me" by my fellow-breeders MERELY "for the sake of preserving purity of descent," (this being, as I have just said, when not combined with purity of FORM, of no value at all, but rather the reverse), but because I doubt whether they are *advantages*. At one period of my life, from about the years 1812 to 1825, I was anxious to improve my flock, if possible, by the introduction of fresh blood; and for this purpose I inspected, I believe, every flock of new Leicesters then in any repute, but (I say it without any wish to depreciate others) *I could not find one* whose form and quality I thought equal or at least superior to my own, and so I became an in-and-in breeder, if you call it so, not so much from choice as necessity, and the same reason for remaining so has existed ever since; for it is absurd to suppose that I should, knowingly, use an animal inferior to my own. I grant that in this view of the case, my ultimate success or failure hinged upon whether I had or had not formed a correct opinion as to what was the true form of a sheep. That I *was* correct, is, I think, amply demonstrated by the undisputed fact that my sheep have not degenerated in any one desirable quality; for it is evident that any flock or herd bred for the number of years I can point to without addition of fresh blood, must have almost died out from sheer diminution of numbers, under the "careful selection and rigorous weeding" necessary in all flocks, and in the few remaining, purity of descent would only increase the evil, from their greater liability to transmit defect to their offspring; and, on the other hand, purity of descent, when combined with true form, becomes of immense, I had almost said of inestimable value, and which increases with every year the breed is maintained.

But, Sir, I go a step further, and without ignoring "the labours of improvers subsequent to Bakewell," let me ask if most of them have not sought to *improve* the breed by introducing alien blood. Judging from the diversity of type and character that nearly every flock of Leicesters exhibits when compared with others, and with those of ten or twenty years since, as well as from common report, I firmly believe this. In fact, I cannot account for this diversity in any other way; and taking into consideration the frequent exchange of rams between all the principal breeders, it is almost impossible that one can exist without some stain in blood, however remote. How, then, can I, who have kept mine pure, use a ram of any other breeder's without cross-breeding, and thus committing the very error you have so clearly described and so emphatically condemned?

I shall, perhaps, be considered too partial a witness if I assert that my sheep are not small. An animal of true symmetrical proportion always appears smaller than he really is, and I invite every one, before giving a decided opinion, to measure the girth, length, &c., of mine, and compare them with others. And I am certain I could by now have shown them many sizes larger, had I indulged and forced them as many breeders have, but I am sure I should have lost more in hardihood and constitution than I should have gained in size.

Fearing to trespass further on your space,—I am, Sir, your obedient servant, VALENTINE BARFORD.

Foscote, near Towcester, March, 1860.

Literature.

THE LETTERS OF HORACE WALPOLE, EARL OF ORFORD. Now first chronologically arranged. Edited by PETER CUNNINGHAM. Part I. Bentley.

A COMPLETE and reasonably cheap edition of Horace Walpole's Letters has long been a desideratum. Here is the first instalment of such a work, which will extend to eighteen monthly parts. Horace Walpole, fop and fribble as he is severely but not altogether unjustly termed by Macaulay, will always be a classic in a branch of literature which may now be considered as extinct,—we mean that of letter-writing. It is needless to dwell on the patent and obvious reasons why we must expect no more such series of letters as these, or Cowper's, or Lamb's, but it may be observed that those which we do possess are enhanced in value by this very fact. Walpole's letters, moreover, besides their value as perfect specimens of their class, have that of throwing no inconsiderable indirect light upon the public men and public business of a century or so ago. To yield the most in this respect they require careful editing and annotating, and, judging from this first part, they have received both from Mr Peter Cunningham. The notes are not too numerous and they are to the purpose. The paper, printing, and engravings are all good, and the price is as low as could be expected in the case of a work which it would have been unbearable to read in a careless, cheap, and shabby edition.

THE POETICAL WORKS OF JOSEPH ADDISON, GAY'S FABLES, and SOMERVILLE'S CHASE. With Memoirs and Critical Dissertations, by the Rev. GEORGE GILFILLAN.

CHAUCER'S CANTERBURY TALES. Vol. I. With Memoir and Critical Dissertation, by the Rev. GEORGE GILFILLAN. James Nichol, Edinburgh; Nisbet and Co., London.

THREE standard poets and three critical memoirs of the same, set forth in clear, large, and excellent type, is assuredly a triumph of the publishing art. In spite of the mediocre quality of some of the poetry, and the false and affected taste of much of Somerville's "Chase," there are many worse volumes than this to have in one's portmanteau as a resource against country inns. The memoirs by Mr Gilfillan have less of his peculiar farfetched style of criticism than usual, contain the leading facts in the lives of their subjects, and, it is hardly necessary to say in this case, are not too long. In the "Canterbury Tales," which are to be completed in three volumes, the memoir will appear in the second and the dissertation in the third. This volume takes us to the end of the "Man of Law's Tale." It includes also Mr Tyrwhitt's valuable essays on the language and versification of Chaucer, as well as his introductory discourse to the "Canterbury Tales." In modernising the text, the plan adopted by Mr Cowden Clarke, in his "Riches of Chaucer," has been followed, and, as in the case of Spencer, the glossary has been placed in the margin. As far as we have examined it, it is sufficient and correct. The general getting-up of the work is as excellent as it is in all the volumes that we have seen of this admirable edition of the British poets.

(1) True Reform; or, Character a Qualification for the Franchise. By Sir John Maxwell, Baronet. Edinburgh: Constable and Co. London: Hamilton. Adams, and Co.

(2) Old John Bull in a New Coat; or, Modern Practice engrafted upon Olden Principles. By A Dutiful and Loving Son. London: Hatchard. 1860.

(3) Reform, Universal Suffrage, Ballot. By C. H. Elsley, M.A. London: Ridgway. 1860.

(4) The Reform Bill and the Queen's University in Ireland: A Letter to the Right Hon. Edward Cardwell, M.P., Chief Secretary for Ireland. By William Lupton, M.A., of the Inner Temple. Dublin: Hodges, Smith, and Co. 1860.

(1) (2) (3) (4) With the exception of the last of them, the four pamphlets on political reform, which conclude our list, scarcely deserve even passing notice. The writers,—with this one exception,—are either utterly at sea on matters of principle, or having, by some happy accident, got hold of a true principle, manage to discredit it and perplex themselves in a labyrinth of absurd applications. We need not say that we heartily agree with the following statement of Sir John Maxwell, in his preface:—

In reconstructing the laws which regulate the electoral franchise, there are two objects which ought never to be lost sight of:—The first is, that these laws should secure a full and fair representation of all the interests of the country in Parliament; and the second is, that they should, as far as possible, subserve the education of the people.

If he had confined himself to this thesis, and adequately supported it, Sir John Maxwell would have done good service. Instead of so doing, he wanders off to, and loses himself in, a semi-protectionist dissertation on labour and capital. When he returns to his proper subject, his suggestions are not very valuable. He seriously proposes to enfranchise "every one who has saved the life of a fellow-creature, who has devoted his life to the care of cholera and typhus patients," or who has discharged with credit the duties of parish constable. The medallists of the Humane Society, and Mrs Gamp and her sisterhood, would obviously qualify under the two former heads. Sir John Maxwell would also give votes to "men who devote their income to educate children of both sexes,—to obey parents, to act honestly, to speak truthfully, to do no violence, to honour the sovereign, and to love their neighbours." How these estimable characters are to be found out, or through what investments a man can "devote his income" to filial obedience, to veracity, loyalty, and the other civil and domestic virtues, we cannot explain; for Sir John Maxwell does not inform us. Good intentions, and honest and painstaking though confused thought, are apparent in his pamphlet.

The author of the pamphlet which bears the affected title of "Old John Bull in a New Coat," also starts from the principle of the representation of interests, and, to the extent of his power, makes a sound principle appear ridiculous by the elaborate absurdities which he deduces from it. He proposes what he calls binary members for counties and boroughs; one member to be elected by landlords and owners of houses exclusively, the other by occupiers and tenants. Railway proprietors are to have 6 members; fundholders, 10; shareholders in gas and water companies, 4 each; woollen, cotton, silk, and linen manufacturers, 2 each; and so on. The scheme is too ridiculous for discussion. It is a gross caricature of the scheme of representing separate interests. The true theory of class-representation recognises the natural aggregation of men into those smaller communities, which, taken together, make up English society. Each town and county has its own peculiar characteristics, derived from predominant occupation and other causes, and as such is a factor in the national life, and is entitled, within the limits of practicability, to separate representation. To group men, spread over the surface of England, according to their professions, or mere local distinctions, in equal electoral districts, is to neglect the real units of English society. It is to make a false analysis of its component parts.

The views of "Reform, Universal Suffrage, and the Ballot," with which Mr C. H. Elsley, M.A., has favoured the world, do not call for remark. He states, very weakly, arguments which in their strongest form have been refuted over and over again. The ballot is Mr Elsley's panacea for most evils. But he has nothing new to say in its favour, except the following remarks, in reference to its alleged failure in America and France:—

America is only half civilised. Ballot has answered well in France, for it has placed a great man at the head of the Empire; he must needs be a great man, else our journalists would not sit on the heights of Dover, barking at him, with good twenty miles of sea between him and them. If he were not a great man, but an insignificant, weak, silly prince, they would not undergo the fatigue of barking.

Like most democrats, Mr Elsley has a weakness for despotism. This cogent reasoning is a fair specimen of his appreciation of facts and powers of argument.

It is with a feeling of refreshment that we turn from the weak and ill-considered effusions just noticed, to Mr Lupton's vigorous plea in favour of the Parliamentary representation of the Queen's University in Ireland. In a clear and unaffected style, and with irresistible force of logic, Mr Lupton points out the considerations which render it just and (we may almost say) necessary that the Queen's University should be enfranchised. We trust his letter to Mr Cardwell may yet be effectual for the purpose which it is intended to promote, and cordially recommend it to the attention of all our readers. The following extract refers to a matter of no slight significance:—

I cannot presume to offer any opinion on the general scope of the reform measures, now submitted to Parliament, but I may be permitted to say, that they have been obviously framed for the purpose of enfranchising a large number of the working classes. The Reform Act of 1832 had for its object the enfranchisement of the middle classes. It has, I submit, always been a principle of our Constitution, that a class of men, different from the landed proprietors and farmers, the commercial and labouring classes, should be represented in Parliament. Hence we have had the universities represented from an early period. It is not difficult to find a reason for this: in the clash of material and local interests, it is well that there should be a class of men who can hold themselves calm and unprejudiced, and who can bring to the discussion of social and political questions a comprehensiveness of view which is the result of their large knowledge and trained habits of thought. Now that means have been provided for extending the representation of the other classes of the community, in a manner adequate to the requirements of the age, is it not most desirable that a similar extension of the representation of the university class should be provided? The due equilibrium of interests, in the House of Commons, requires that this be done, and it is in recognition of this necessity that we find that the University of London and the Scotch universities are henceforth to be represented; I submit that this necessity for such balancing of interests is not less in Ireland than in Scotland or England. It would ill become me to speak of the character of Irish representatives; but I may say that it is not more moderate in tone than that of the sister countries. In fact Irish members generally are somewhat extreme in their political views, and I cannot think that it would tend to the increase of this *ultra-ism*, to introduce among them a portion of that toleration and liberality, of temper at least, which the Queen's Colleges are, happily, diffusing among the educated classes of the people. The extension of the franchise, at present proposed, will tend to throw a large portion of political power in the hands of those who are naturally least moderate; but who will, I trust, prove not unworthy of the boon. I ask for the countervailing concession to moderate men.

The foregoing extracts and remarks present a fair sample of the quality of the pamphlet-literature of the day. The per centage of excellence is something like that of human virtue in the days of Solomon, scarcely "one good among a thousand." It is consolatory to think, that if the world knows little of its wisest men, it knows almost as little of its most foolish ones; for, of the many pamphlets published, very few, we believe, are sold, and still fewer read. Still it is instructive occasionally to consider what persons, not of the wisest, are thinking and saying on the topics of the day. This must form our excuse for having bestowed a passing comment on some of the *brochures* named at the head of this notice.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The Protectionist party in the Legislative Body has attempted to delay the discussion of the Bill relative to the reduction of the import duties on sugar, coffee, &c., by proposing that, instead of being referred to a special committee, as is usual with such measures, it shall be sent to the Committee on the Budget for examination, on the ground that, as it affects the revenue, it falls within its province. But the Chamber has had the good sense to refuse this insidious proposition. I fear, however, that the Protectionists, not content with their check on this point, will again endeavour to create obstacles to the passing of the Bill. They will do so, not so much from repugnance to the measure itself,—for why should they object to cheaper sugar and coffee?—as to show animosity to the Government for concluding the treaty with England, which treaty will fortunately not (as I have before said) be submitted to them. But, nevertheless, the Bill will pass, because the Government wishes it to pass.

The Government has just presented to the Corps Legislatif the budget for the year 1861. The expenses are estimated at 1,844,188,685f (73,780,000*l*), which are 14,472,737f more than those of 1860: the receipts at 1,845,733,670f, which are 19,879,291f more than those of 1860. Deducting the expenses from the receipts, there will appear a surplus of 1,544,000f. Though this surplus is a small one, it is satisfactory; but unfortunately in this country budgets are somewhat fantastic things, inasmuch as the Government largely exercises the power with which it is invested of modifying them by the grant of "supplementary credits" for this or that object. In the report with which the Minister of Finance accompanies his budget, there are two or three points worth notice. First of all he calculates that the abolition of the duty on wool and cotton will cause a loss to the revenue of 25,409,000f; the reduction of the duty on coffee one of 6,442,000f; the reduction of the duty on sugar one of 53,243,000f; and

that on navigation duties, 3,500,000f—total 88,594,000f. As to the reduction of the duties on cocoa and tea, he sets down nothing on that score, because he thinks that the increase in the quantity consumed will compensate for the falling off in the revenue. As a set-off to the said total loss of 88,594,000f, the Minister counts on—17,702,000f from the natural expansion of the direct and some other taxes, and of those Customs duties not affected by the English treaty or the proposed reforms; 1,170,000f to be obtained by increasing the import duty on foreign wines from 25c to 12f the hectolitre, an augmentation which, he says, will not materially affect consumption; 2,282,000f from the duty on English iron, of which the importation under the treaty may be expected to increase; 3,321,000f from the duty, which may be 30 per cent. *ad valorem*, on the import of goods heretofore prohibited; and, lastly, 24,000,000f from an increase which he proposes in the duty on alcohol. These various items make up a total of 48,475,000f, and that reduces the aforesaid loss to 40,119,000f. To make up this sum the Minister proposes to suspend the operation of the sinking fund, by which he will get 40,000,000f. Such is the budget of 1861.

The proposed augmentation of the duty on alcohols will necessarily, to a certain extent, affect the import into England which has been counted on under the treaty. The duty at present is 50f the hectolitre, and the Minister demands that it shall be increased by 25f, or, including the two *decimes*, by 30f. He justifies the increase on the ground that alcohols being less wholesome than wine, beer, or coffee, are a fit object for taxation; and also from the fact that experience has demonstrated that an augmentation of price, caused by an addition to the tax, does not reduce materially the consumption. The quantity consumed in 1858 was 842,000 hectolitres, and the Minister calculates on a consumption of not less than 800,000 hectolitres with his new tax. He remarks that, even when increased, the tax will be much lower than that levied in England; and yet that in the latter country the consumption considerably exceeds what it does in France, though the population is less.

On the subject of sugar, the Minister calculates that, as was the case in England, the reduction of the duties, which is to be about one-half of what they are now, may be expected to cause an increase in the consumption of 28 per cent. for three years. In 1858, he says, the consumption was 201,000 tons, and in 1861 he supposes that it will be 258,000 tons; not counting in the latter year about 56,000 tons of raw brought in to be refined and then re-exported. On the subject of coffee the Minister enters into no details.

One other point remains to be noticed in this budget of 1861. It is that a sum of 773,370f will be required for the payment of "interest on the last loan of 520,000,000f, which was not sufficiently provided for in the budget of 1860;" and a further sum of 2,893,801f of *rentes*, "which will have to be given to the Caisse de la Dotation de l'Armée in exchange for the capital coming from its surplus receipts." This last item is a new proof of the fatal facility with which the present Government increases the national debt.

In order to impress on the public mind, and especially on the Corps Legislatif, the great advantages of the commercial treaty with England, the official *Moniteur* has (an unexampled circumstance I believe) *twice* published,—once on Monday the 2d, and again yesterday, the second time in flaming type—a table, showing item by item "the duties to which French productions were subjected in the United Kingdom compared with what they will enjoy in virtue of the treaty." This document (in which the English measures, weights, and moneys are turned into French) presents, in a more striking manner than I have yet seen, the really vast concessions which England makes to France by the treaty. I should be very glad to reproduce it, but it would take up more space than you could afford. The number of times to which, under the treaty, the word "exempt" is placed to articles which previously paid heavy duties, and the large reductions made in duties retained, must, I should think, produce an impression on the hearts of even the most obdurate Protectionists and Prohibitionists in this country; and must even, I should imagine, make them suppose (according to their manner of reasoning) that "Albion," instead of being "perfidious," as they have been roaring for the last 50 years and more, is the most idiotic of nations. The *Moniteur* ought in common fairness to add to its *tableau* of English concessions, one of those which Franco makes to us:—the contrast would be astounding. Perhaps that contrast might shame the French Government, I will not say into making larger concessions—for that is a thing not to be expected—but at least into acting with something, like honesty in the great question of rags, and the still greater one of reciprocity in shipping,—the only two matters it seems on which we have consented to ask for anything. In an article on the subject of the aforesaid *tableau*, the *Moniteur* of this morning, after detailing once again some of the concessions of the English as regards *articles de Paris*, and especially jewellery, bronzes, boots, shoes, hats, artificial flowers, and women's bonnets and dresses,—mentions a striking fact which shows the great advantage of the treaty to France. This fact is that many of the exemptions and reductions of duties accorded by England having come into force as soon as they were voted by the House of Commons, it appears from official returns that in the brief space of five days of the month of March (from the 24th to the 28th, both inclusive) Paris alone exported of articles of its fabrication 3,313,000f worth, whereas in the corresponding five days of the same month last year the export was only 2,716,000f; consequently there was an increase of 600,000f (24,000*l*.)

At a meeting of influential merchants and others held yesterday in the Hotel du Louvre, under the presidency of M. Arles Dufour, the well known silk merchant, the resolution was come to, to establish an "Association for Commercial Reform" M. Jean Dollfus, of the Chamber of Commerce of Mulhouse, was appointed President of the Association. M. Arles Dufour, M. Lopes-Dubec (President of the Committee of Commerce of Bordeaux), M. Pastré (President of the Chamber of Commerce of Marseilles), and M. Delaunay (a deputy), Vice Presidents. A Council of 54 members was elected, and it was resolved to increase the number of it to 100. The Association, which has been sanctioned by the Government, will form Committees in the departments, and cannot fail to do great good.

From the report read at the meeting of the shareholders of the Western Railway Company, which (as stated in my last) was held last Thursday, it appears that the total receipts of 1859, after deducting Government taxes and some other charges, were 47,929,283f; and that, after deducting working expenses and ordinary outgoings, there remained 11,250,000f for the shareholders. This, as stated last week, makes the revenue of each share 37f 50c. A meeting of the Orleans Railway shareholders was held last Friday. A dividend of 97f per share was declared for last year; of which 30f have already been paid on account. Authorisation was given to the directors to raise a loan of 200,000,000f. The Parisian Gas Company has also held its annual meeting within the last few days; it declared a dividend of 60f, of which 25f have been paid on account. The Parisian Omnibus Company resolved that 36f per share should be distributed as balance of the dividend for 1859; but that it shall not be paid until the 1st July next. The last two companies are under the protection of the Credit Mobilier.

As was foreseen, there has been a reaction on the Bourse; but on the whole it has not been so great as from the suddenness of the rise had been expected: this, however, is owing to Government establishments having continued their purchases.

The following is an account of the markets:—

FLOUR.—At *Paris*, the market has been calm during the week. Yesterday quotations were 52f to 56f 50c the sack of 159 kilogs according to quality; four marks were lower than last week,—55f 25c for the current month, 56f to 56f 25c for May, 56f 50c to 56f 75c for May and June, and 57f for June alone.

WHEAT at Paris, yesterday, was not active, and quotations were 32f to 34f the sack of 120 kilogs. As regards the provincial markets, 73 present a rise of 14c to 1f the hectolitre, 16 a fall of 15c to 1f, and 34 remained unchanged.

COTTON.—At *Havre*, in the week ending Friday, the sales did not exceed 5,548 bales; and prices for "low" of all sorts fell 1f, other qualities remaining unchanged. Low New Orleans was consequently 99f the 50 kilogs (nearly 1 cwt); very ordinary ditto was 106f. The arrivals during the week were 4,804 bales. The stock on the 1st of this month was 241,300 bales. Business this week has been very slack, and yesterday low New Orleans was 98f to 99f.

SUGAR.—At *Havre*, in the week ending Friday, the market was calmer. 169 hogsheads French West India went at 62f 50c to 63f the 50 kilogs duty paid; 5,000 bales Reunion, 63f 50c; 18 casks Havana, 38f in bond. The arrivals were nearly 800 casks West India, 200 sacks Pernambuco, 9,150 sacks Reunion, 6,058 sacks Mauritius, and 1,153 sacks from Dunkirk. The stock of French West India on the 1st was 233 tons; that of Reunion 240 tons. This week no other sale has been effected than one of a small lot of damaged Havana. At *Bordeaux*, last week, 3,200 sacks Reunion went at 63f 50c, and a small lot of French West India at 62f. There were no sales of foreign. This week as many as 7,000 bales Reunion have been sold, but the prices are not given; and, in addition, 326 bales were sold at 61f. At *Nantes*, last week, business was important, as many as 80,000 sacks and 1,800 casks Reunion and Mauritius having been sold for delivery in June and July, 8,798 sacks Reunion disposable, and 500 casks French West India. The brokers fixed the quotations of the week at 63f Reunion, 66f Mauritius (in bond), 37f Havana. This week, upwards of 8,000 bales Reunion have been sold, part at prices not stated; part, superior quality, 65f; also a small lot of "gros grain," at 67f to 67f 50c. At *Marseilles*, last week, there were some large sales of Reunion and Mauritius.

COFFEE.—Although the market at *Havre*, in the week ending Friday, was calmer than in the preceding fortnight, sales were not unimportant, and no marked reaction in prices took place. 900 sacks Hayti Port-au-

Prince went at 79f the 50 kilogs in bond; 721 Hayti Cape, 81f; 280 Gonaives and 800 St Marc, 81f; 118 sacks Rio, not washed, 76f to 80f; 500 sacks Malabar triage, 133f 50c; 3,370 sacks and nearly 300 casks Porto Rico, 100f. In addition, 2,500 sacks Hayti, damaged, were sold. The arrivals were about 20,000 sacks. The stock on the 1st was 83,141 sacks. This week the sales have been inconsiderable: Hayti, 79f; Gonaives, 82f; ditto Cape, 81f; Rio, washed, 83f. At *Nantes*, last week, there were no sales, nor have there been any this week. At *Bordeaux*, last week, the sole transaction was mentioned in last week's ECONOMIST. Some large sales have taken place this week, but the details are not given: among them were 410 casks Santiago and 594 damaged Java. At *Marseilles*, last week, 7,500 sacks Rio were sold at 72f 50c the 50 kilogs in bond; and 600 sacks Hayti at 80f.

INDIGO.—Nothing was done at *Havre*, in the week ending Friday, but a small quantity of Java was imported. The stock on the 1st was rather more than 1,100 cases. There have been no sales this week. At *Bordeaux*, last week, the sales were 35 cases Kurpah, but the prices are not given. On the 1st, the stock was 851 cases. Only 2 cases Java and Bengal have been sold this week.

HIDES.—At *Havre*, in the week ending Friday, the demand was calm. 1,961 dry La Plata went at 143f to 161f the 50 kilogs duty paid; 1,227 ditto of animals dead of epidemy, 138f; 405 Australia salted, 57f 50c to 65f; 500 New York salted, 63f 25c; 276 Algeria salted, 60f. A considerable quantity of Buenos Ayres, Monte Video, Pernambuco, La Plata, Irish, Texan, Peruvian, and East Indian were offered for sale by public auction, but only very insignificant lots were sold. The arrivals exceeded 25,000. This week the sole sale has been 281 horse Buenos Ayres salted, 13f each duty paid.

WOOL at *Havre*, in the week ending Friday, was more active. 60 bales La Plata, unwashed, went at 1f 50c to 2f 67½c the kilog in bond; 6 bales ditto at 80c duty paid; 500 Peru, unwashed, 1f 35c to 1f 65c; 57 bales sheepskins La Plata, 1f 35c to 1f 65c. The arrivals exceeded 500 bales. This week, 9 bales sheepskins Buenos Ayres, washed, have been sold at 2f 64c in bond.

TALLOW.—At *Havre*, last week, there were no sales; and have been none this week. At *Paris*, yesterday, the 100 kilogs were 135f 75c, a rise on last week's quotations.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg. was 102f to 103f the hectolitre; Montpellier of 86 deg., 135f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 132f 50c; beetroot, first quality, 106f.

VIENNA, March 30.

There is decidedly not the slightest prospect that the new loan of 200,000,000 florins which the Government wants to raise will be subscribed in this country, notwithstanding the very favourable conditions which are offered as regards interest and premiums. Foreseeing this, the Minister of Finance has sent circulars to the Board of Directors of the Elizabeth, Northern, Franco-Austrian, and other railways, *inviting* them to subscribe, and expressing a confident conviction that they will not neglect the invitation. Of course this is equivalent to a positive command; and in a despotic country like this a command, however unjust it may be, must be obeyed, whatever the cost to the individual. The Government professes to want the loan to reduce its debt to the Bank, and to enable the latter to resume cash payments: but when the last oan was raised, a promise was made to pay the Bank; but not only was it not kept, but on the strength of it,—the promise,—a further advance of 80,000,000 florins was obtained:—and, no doubt, on this occasion also we shall see the Government appropriate to its own purposes all the money that may be raised and leave the Bank in the lurch. In addition to the subscriptions extorted from companies, the Government intends, I hear, to make the Hungarian municipalities and capitalists subscribe largely, in order to punish them for their political disaffection.

BRUSSELS, April 4.

The "Association for Customs Reform" has addressed a letter to the Minister of Finance, expressing hearty approbation of his proposed abolition of *octrois* (duties levied on provisions and articles brought into towns and villages), but at the same time pointing out the necessity of making Customs reforms "on a large and rational scale."

COMMERCIAL AND MISCELLANEOUS NEWS.

Advices from Calcutta state that Mr Wilson had delivered his speech in the Council on his new issue of notes. Money in India appears to have been in good demand, at full rates. The import trade, almost generally, was inactive.

The commercial letters at hand from Australia, this week, state that trade was in a depressed state, and that the value of goods was barely supported.

Mr Ed. Khull, of Melbourne, has furnished the annexed particulars of the gold-fields of Victoria for the year 1859. Gold received per escorts at Melbourne, 1859, 2,202,012 ounces; brought by private hand, 162,123 ounces.

COUNTRIES to which SHIPMENTS of GOLD have been made, and their VALUES.

We have advices from Jamaica to the 10th ult. At the 41st half-yearly meeting of the shareholders of the Bank of Jamaica the directors' report was adopted. A dividend at the rate of 7 per cent. per annum was declared; which, when paid, will leave a surplus on the half-year's business of 1,996*l* 2s 1d. The supply of coffee was still limited, and all that had been brought to market was readily taken at 41s to 44s for common to good ordinary. There was very little pimento offering; one lot had been sold at 2⅞d cash. Sugars remained as last quoted, sales having been made of dark at 16s to 17s, and of fair grocery at 20s per 100 lbs.

Commercial advices from Rio de Janeiro are to the 9th ult. The continued pertinacity of dealers in coffee in exacting previous high rates, in which they had been supported by the moderate extent of supplies (not averaging more than 4,000 bags per diem), was the main cause of the restricted amount of business that had been done since the departure of the previous steamer. Sales from the 7th to the close of February amounted to 50,000 bags only, of which 22,000 were for the United States. In some few instances a slight difference in price in favour of the purchaser was perceptible. After the arrival of the steamer some movement appeared, chiefly for France, and of 59,500 bags sold since then about 36,000 were for that quarter. The prices of assorted lots for the United States had ruled from 6,300 to 6,500 reis, and a very choice one was sold on the 8th ult. at 6,600 reis. Total sales from 7th of February to date, 112,700 bags, of which 35,700 were for the United States, 8,300 for California, 28,900 for the Channel and the North of Europe, 39,800 for the Mediterranean. Stock, 120,000 bags. The anticipated rise in sugars had been realised. Prices advanced to 5,300 to 5,400 reis redondo, 5,000 to 5,200 batido, and 4,000 to 4,400 mascavo; and 1,122 cases 890 packages Campos had been sold, nearly the whole for exportation. Of sugars from the North, 11,747 packages and 160 cases were disposed of at 5,400 to 6,400 for white, and 3,200 to 4,200 brown, all for home use. The market had latterly become calm. Stock, 1,078 cases 769 packages Campos, and 327 cases 9,000 packages Pernams. At Bahia late rains had cheered up the prospects for the growing crop of sugar. There was no material alteration in the price of sugar, sales having again been effected at 2,700 to 2,800 per arroba for brown Nazareths, and 2,900 to 3,000 for Bahias in bags.

The annexed returns show the trade of New York for February:—

Imports.	Feb., 1858. dols	Feb., 1859. dols	Feb., 1860. dols
Entered for consumption	5,840,256	15,261,446	14,467,040
Entered for warehouse	1,330,623	1,261,502	1,526,772

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria. cap. 32, for the week ending on Wednesday, the 4th day of April, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,687,415	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,212,415
		Silver Bullion	...
	28 687,415		28,687,415

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,221,140
Rest	3,783,135	Other Securities	24,964,764
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	9,696,432	Notes	6,841,625
Other Deposits	13,966,348	Gold and Silver Coin	671,182
Seven Day and other Bills	699,996		
	42,698,911		42,698,911

Dated the 5th April, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,545,586	Securities	35,107,904
Public Deposits	9,696,432	Coin and Bullion	14,883,597
Private Deposits	13,966,348		
	46,208,366		49,991,501

The balance of Assets above Liabilities being 3,783,135*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£871,223
A DECREASE of Public Deposits of	687,678
An INCREASE of Other Deposits of	410,154
A DECREASE of Government Securities of	50
An INCREASE of Other Securities of	1,009,575
A DECREASE of Bullion of	388,104
An INCREASE of Rest of	27,722
A DECREASE of Reserve of	1,253,339

From the above return, it will be seen that the Bank has, this week, continued to discount largely—the increase in "other" securities—which now amount to nearly *twenty-five millions*—compared with the previous return, being 1,009,575*l*. The circulation of notes has steadily increased; but there is a falling off in the stock of bullion of 388,104*l*; and in the reserve of 1,253,339*l*. The rest is now 3,783,135*l*, against 3,658,339*l* at the corresponding period in 1859.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,469,409	£ 20,280,754	£ 20,961,157	£ 22,276,721	£ 22,545,586
Public deposits	9,255,123	9,019,533	6,988,972	9,999,661	9,696,432
Other deposits	10,024,993	9,419,012	13,733,515	12,920,732	13,966,348
Government securities	14,418,854	11,645 974	9,955,978	11,706,305	10,221,140
Other securities	11,981,434	21,649,787	16,620,004	17.717,713	24,964,764
Reserve of notes & coin	11,561,272	4,281,015	12,641,058	11,933,318	7,513,007
Coin and bullion	16,935,782	9,343,720	18,311,398	18,950,478	14,883,597
Bank rate of discount	2½ p. c.	6½ p. c.	3 p. c.	2½ p. c.	4½ p. c.
Price of Consols	96	92¾	96¼	95⅛	94⅛
Average price of wheat	38s 1d	54s 8d	44s 3d	40s 8d	40s 5d
Exchange on Paris (shrt)	25 50 55	25 25 32½	25 5 12½	25 2½ 10	25 10 17½
— Amsterdam ditto	12 3½	11 16 16½	11 15 16	11 14 15	11 14 14½
— Hamburg (3months)	13 13½	13 8½	13 6 6½	13 5⅛ 6	13 5⅝ 6

At the corresponding period of the year 1850, diplomatic relations were about to be resumed between England and Spain, through the medium of Belgium. Specie was being remitted to Russia on account of Messrs Baring's loan. There was a continued rush of emigration from the United States to California.

In 1857, there was great pressure in the money market, accompanied and partly caused by a drain of silver to the East and of gold to the Continent. The Bank reserve had fallen to four millions and a quarter, and fears were entertained (though not at that period realised) that the rate of discount, which had just been raised to 6½ per cent., would be advanced to 7. At Hamburg the value of money was 8 per cent.

In 1858, Mr Disraeli's Budget was waited for. Notwithstanding the payment of about one-third of the Indian loan of 5,000,000*l* (many of the subscribers paying in full), the money market was very easy.

In 1859, another Indian loan was daily expected; the Russian 3 per Cent. loan of 12,000,000*l* was likewise on the eve of issue; and payments upon the Chilian loan of 1,554,000*l* were in progress. Great depression was manifested in the stock markets throughout Europe, the conditions and time of meeting of the proposed Congress having become very uncertain, and the continued armaments of France, Sardinia, and Austria clearly portending war. Lord Derby had announced his intention of dissolving Parliament, as soon as the necessaary money bills could be passed through Parliament.

The amounts of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,956,441*l*; in 1857, a deficiency of 12,230,775*l*; in 1858, a deficiency of 2,886,489*l*; and in 1859, a deficieney of 4,796,981*l*. In 1860, the deficiency is 10,998,416*l*.

The money market during the present week has continued very tight, as the changes shown in the Bank return indicate. The market has not resumed its usual aspect. The supply of money in all channels has been rather limited, and holders have seemed occasionally indisposed to part with it. Some transactions have taken place in the best paper at the Bank *minimum*, but in the majority of instances discounters have been reluctant to do business below 4¾ to 5 per cent. Th prospect of being compelled themselves to apply to the Bank serves to explain their caution. Consequently, this week, as last, an unusually large demand has been experienced at the Bank of England, which may be said to retain in a marked degree the control of the market. There was an apprehension in some quarters that the Bank rate of discount might be raised to 5 per cent. at the weekly court yesterday. The movement in the reserve indicates that a rise to 5 per cent. might have been decided upon yesterday with at least as much reason as the rise to 4½ on the previous Thursday; but the Bank Board were probably influenced by a desire not to provoke criticism of the manner in which they deal with the public balance. After the dividends shall have been paid, they will, perhaps, feel that they have a freer action.

Yesterday, as soon as it transpired that no alteration had been made in the rate of discount at the Bank, the supply of money became rather more liberal, and the general market was somewhat less stringent. It will be noticed that a good deal of money has been absolnely drawn from the Bank into circulation. Moreover, the mercantile engagements maturing in the first week in April have been met, and the approach of the dividend period tends to relax the demands of money-holders. Some interest is felt to see what effect will be produced by the repayment to the Bank of that portion of the dividend-money which may be said to be represented by the advances made by the establishment during the shutting of the transfer-books. The extraordinarily large amount of the "other" securities in the Bank denotes a strained condition of the market, which is shown to be dependent upon the Bank in an unusual degree. Should the "other" securities run off largely upon the release of the dividends, it will be at the cost of a draught upon the outer market. These considerations do not by any means encourage the idea of a reaction from the late rise in the rates of discount. The principal reassuring features are still the soundness of trade and the absence of any foreign drain of bullion.

The dividends will be payable at the Bank of England on Monday next.

On Saturday last, news was received of the arrival of the steamer Parana from the West Indies and Isthmus with no less than 537,000*l* in specie, nearly all silver. This mass of treasure has reached the Bank. The other imports of specie and bullion this week have comprised a total of about 110,000*l*.

The firmness of the Continental exchanges has been increased by the tightness of the money market here. In several instances the rates were quoted yesterday afternoon slightly more favourably than last week. The quotation for bills on Belgium, amongst others, has advanced.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date yesterday:—

Gold.—Since the date of our last circular (29th ult.), the Wellesley with 94,000*l*, has arrived from Melbourne; the New York, with 26,000*l*, and the Australasian, with 20,000*l*, both from New York; the America, from Boston, with 4,000*l*; and the Tyne,

from Brazil, with 6,464*l*. These amounts have been taken for exportation; although, owing to the demand not being so brisk, the price has not recovered from the fall mentioned last week. Some small sums (25,000*l*) have been taken from the Bank, but these were for exceptional orders. The Parana brings 48,000*l*, in gold, from the West Indies, but this will not be deliverable until next week. The Australian mail mentions the sailing of seven additional vessels with gold, and we give a list of all the ships now on the way:—The Copenhagen, out 100 days, with 157,000*l*; Suffolk, out 85 days, with 129,000*l*; Monarch, out 71 days, with 116,000*l*; Greyhonnd, out 78 days, with 20,000*l*; Norwood, out 71 days, with 36,000*l*; Ocean Chief, out 71 days, with 128,000*l*; Montmorency, out 68 days, with 36,000*l*; Lightning, out 56 days, with 52,000*l*; Lincolnshire, out 56 days, with 128,000*l*; making a total of 802,000*l*.

Silver.—Our market for silver has been flat; and, as some large sums have been imported from the Continent, the price has again receded to 61¾d per oz standard. The demand for the last mail to India and China was very limited, caused partly by the tightness of the money market here,—the steamer taking only about 100,000*l*. The letters from Bombay, which will be delivered on the 5th inst., are expected to bring orders; but we do not look for much recovery in the price. The Parana has brought 489,000*l*, in silver and dollars; but this amount will not be deliverable until Tuesday or Wednesday next. The Tagus has brought 3,768 from the Peninsula.

Mexican dollars will be materially affected in price by the large quantity brought by the Parana. As they will not be delivered to the consignees until next week, the price is not likely to be altered until the receipt of the next telegram from China.

Exchange on Bombay and Calcutta, 60 days' sight, for bank drafts, is 2s 0¼d per rupee; Madras, 2s to 2s 0⅛d; documented bills, 1s 11⅝d.

India Government Loan Notes have improved the last two days, and have recovered from the lowest point of 103¼ to 103½-¾ for 5½ per Cents., and from 97¼ to 97½-⅝ for 5 per Cents. The amounts that have changed hands at these quotations have not been large; but the improvement is satisfactory, as showing that the lowest point has most probably been touched. The quotations from Bombay to hand this day are 96¼ and 103 to 104 for 5 per Cents. and 5½ per Cents. respectively.

To-day, being Good Friday, was, of course, observed as a close holiday in commercial circles.

The adjudication of the Victoria Government railway loan of 2,650,000*l*, fixed for Wednesday next, is looked forward to with a good deal of interest. Most persons seem to be of opinion that a fraction over 105 per cent. is a very fair price for subscribers to offer, considering the uncertainty of foreign politics, the state of the money market, the obligation of paying up the entire amount of the debentures at once, and, what must not be forgotten, the reasonable margin for profit which every person who takes part in an operation of this kind has a right to look for. Subscribers can have little inducement to take up a new stock unless it is offered upon terms relatively cheaper than those already current for stock of a similar description.

The scrip of the new Brazilian loan has recovered to ¼ discount to par.

It is rumoured that the sum divisible amongst the shareholders in the South Austrian and Lombardo-Venetian Railway Company on the 1st of May as interest and dividend has been fixed at 22½f per share, making, with the 7½f already paid as interest, a total distribution of 30f for the whole year 1859. This is equal to about 12½ per cent. per annum upon the par value of the capital paid up. This sum of 22½f will be receivable at the date fixed for the call of 2*l* per share. After the payment of the dividend, there will remain a surplus profit of 220,000*l* or 230,000*l* to be carried forward.

Another call of 5 dols has been unexpectedly announced upon the shares in the Illinois Central Railway.

The latest prices for shares in new projects yesterday afternoon were as follows:—Ocean Marine Insurance, 2⅞ to 3⅛ prem.; Universal Marine Insurance, ½ to ¾ prem.; London and Provincial Marine Insurance, ¼ to ⅜ prem.; San Paulo (Brazilian) Railway, ⅜ to ¼ dis.; Bank of Turkey, 1½ to 1¼ dis.; City of London Brewery Preference, ⅜ to ⅝ prem.; and Buenos Ayres and San Fernando Railway, 2¼ to 2¾ prem.

A rise of about ¾ per cent. has taken place this week in the French funds. The 3 per Cents. closed yesterday at 70 for money, and 69·90 for the end of April. A more confident feeling seems to prevail with regard to politics. It is also stated that the purchasers of the rentes for account of sundry public funds have not yet ceased.

The English funds have likewise rallied. The announcement that the Emperor of the French is willing to submit to the Great Powers the question of the neutralised districts of Savoy has had a favourable effect, and the improvement on the Paris Bourse naturally reacts here. Moreover, as we pointed out last week, Consols now carry three months' dividend. Under the influence of re-purchases by previous speculative sellers, an extreme rise of ⅝ per cent. was attained, Consols reaching yesterday 94⅝ to ¾. The usual speculative reaction followed in the afternoon, and the latest quotations were 94⅜ to ½ for money, and 94½, "sellers," for the 11th inst. These prices are ½ per cent. above those of last Friday. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

CONSOLS.

The course of the market for British railway stocks continues to corroborate all the sanguine anticipations that have been expressed concerning it. The traffic is excellent, the increase being especially large in the manufacturing districts, in consequence of the remarkable activity of trade. The increase in the traffic occurs, too, in most instances, without any increase in the number of miles of railway open. The public, instead of selling, are encouraged to make fresh investments in this class of property, of the solidity of the basis of which they have perfectly satisfied themselves. Thus, the railway share market has been almost unaffected by the recent rise in the value of money. Yesterday's closing quotations, compared with those of last Friday, show a rise of 2¼ per cent. in Midland stock (which continues in extraordinary favour, and has been dealt in as high as 118⅜), 1¾ per cent. in Great Western and Lancashire and Yorkshire, 1¼ per cent. in Berwick, 1 per cent. in Great Northern and York and North Midland, ¾ per cent. in Caledonian, London and North-Western, North British, and South-Eastern, ½ per cent. in London and South-Western, &c. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3⅜ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 108⅞ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The demand for wheat at Mark lane this week has continued in a healthy state, at full quotations. All kinds of spring corn and flour have commanded extreme rates, with a good consumptive inquiry. The imports of produce from abroad have continued limited. Some of the Greek firms, in order to throw risk upon English consignees, have advised their correspondents that in future "the cargoes are to be taken as they stand, and that should any sea accident affect the quantity on board the vessels, invoice quantity to be final." This attempt to throw all losses upon the purchasers must surely fail: besides, after this notification, no one would be justified in buying without a positive guarantee, both as regards quantity and quality. There must, of course, be two parties to all contracts; and the final settlement of this much vexed question, in reference to floating cargoes, should at once be set at rest by the buyers. Mr Ed. Rainford states that 11 cargoes have arrived off coast since the 30th ult., and that the demand has continued steady, at full quotations.

Messrs Briggs and Co., of Alexandria, report the state of the grain trade to the 27th ult., as follows:—

Receipts of wheat and beans in our grain market during the past week have nearly altogether ceased. Purchases of the former have been entirely for local consumption, and in the latter the only transaction is a re-sale, from second hands, of a lot of about 700 ardebs noted below. For Indian corn the demand is active, at advancing rates. The following are the transactions since our last advices of the 17th instant, with present prices, free on board, viz.:—Wheat, Saide, 560 quarters, at 36s 6d to 37s per quarter; Behira, at 33s 6d to 34s per quarter; beans, Saide, 455 quarters, at 28s 6d to 29s; Behria, 135 quarters, at 27s 6d to 28s per quarter; Indian corn, 4,520 quarters, at 26s to 27s per quarter; lentils, 75 quarters, at 26s 6d to 27s 6d per quarter; sessame, 75 quarters, at 66s 6d to 67s 6d per quarter.

The Liverpool cotton market week closed on Thursday, and the total sales in five days have amounted to 40,000 bales, of which spinners have taken 32,000, speculators 1,000, and exporters 7,000 bales. Quotations are unchanged from Friday last. There has been a moderate demand throughout the week, but the quality offering is so considerable, that the inquiry is freely met, and with difficulty only prices of the lower descriptions are maintained. Yesterday the market closed quiet and lifeless; sales, 7,000 bales, without change in prices.

There has been very little business doing in the tea market, and, to force sales, lower rates must be submitted to by the importers.

The inquiry for all raw sugars has ruled somewhat heavy, and the quotations have, in most instances, given way 6d per cwt. Refined goods move off slowly at barely stationary prices. Letters from the Mauritius to the 8th ult. state that the prospects of the sugar crop were favourable. The total shipments to the 6th ult. were 196,621,058 lbs, against 190,238,613 lbs to the same date in 1859.

Messrs Trueman and Rouse furnish the annexed table:—

IMPORTS and STOCKS of SUGAR and COFFEE at the PRINCIPAL EUROPEAN PORTS, for the Two Months ending 29th February, 1859 and 1860.

	SUGAR.			
	Imports.		Stock, 29th Feb.

Total	30,310	26,980	56.850	43,620

* The stocks in Holland are in first hands only; in all other countries in first and second hands.

In comparing the above total imports of sugar with the previous month, we find that in February they amounted to 46,710 tons. The stock, however, declined 3,960 tons, viz., from 136,700 to 132,740 tons. The imports of coffee increased 11,080 tons, and the stock rose from 41,440 to 43,620 tons—a strong proof of the soundness of the trade since the commencement of the year.

Great firmness has continued to prevail in the inquiry for coffee, at fully the late upward movement in price. Cocoa, however, has commanded less attention.

Rice has sold freely; but we have no change to notice in the value of any kind.

The wool trade in London has been devoid of animation. There are, however, no sellers, except at full quotations. In reference to the wool trade, at Liverpool, Messrs Ronald and Son thus write:—

East India—Public sales have been fixed to commence here on the 19th proximo; the quantity arrived is 9,000 bales, but may probably be increased by that time to 11 or 12,000 bales. The consumption having been considerable since our last sales, manufacturers and dealers are pretty well cleared out, and we may therefore look forward to a satisfactory result for the approaching series. Peruvian—The arrivals have been 4,300 ballots; the better qualities continue to meet with ready sale for consumption, whilst the lower kinds have been taken for export. Alpaca—Considerable sales have taken place during the month, both of what was on the spot and to arrive, of prime quality at full prices, and the stock is now reduced to a few thousand ballots only, some of which are second class, and less easily saleable. English wools have been in steady request, but prices being comparatively high, consumers have brought with extreme caution, and only for immediate wants. Laid Highland continues in but limited request, without change in value, but Cheviot of a good class is still inquired after. In Irish a fair business has been done at late rates.

The fruit market has been very inactive, at about previous quotations. Messrs Witherby and Son inform us that the stock of currants at this port on the 31st of March was about 10,450 tons, consisting of 240 butts, 2,782 carroteels, 1,435 pipes and half-pipes, 72,451 barrels, and 18,789 cases, against 10,200 tons on the 31st of March, 1859, and 5,500 tons on the 31st of March, 1858. The stock of Valentia raisins at this port, on the 31st of March, consisted of 74,547 boxes and 40,665 half-boxes, or 2,350 tons, against 3,200 tons on the 31st of March, 1859, when prices were 30s to 36s, and against 2,500 tons in March, 1858, with prices at 46s to 56s. Of Turkey reds, it consisted of 7,084 barrels and 78,800 boxes, or 3,000 tons, against 2,000 tons at Christmas last, and 550 tons on the 31st of March, 1859, and 1,100 tons in 1858. Very few blacks, and about 100 tons Sultanas, against about 70 tons in March, 1859. Muscatels are very abundant, 72,000 packages, against 13,000 this time last year. There are no Denias, nor any low old fruit. The total stock of raisins of all sorts is 6,100 tons, against 4,300 tons last year, the excess being in Turkey reds and Muscatels. The clearances of raisins for consumption in March were 666 tons, and for exportation 485 tons, together 1,150 tons. Those of January, February, and March (duty paid) were 1,710 tons, against 1,200 tons in 1859, when prices were lower than at present.

Hemp has changed hands freely, at very full prices. The Government contract for 3,000 tons Petersburg clean has been taken at from 29*l* 14s 6d to 30*l* 11s 4d per ton, to be delivered at Chatham, Portsmouth, and Devonport. None of the Riga tenders have been accepted.

A COMPARATIVE STATEMENT of HEMP and FLAX remaining on hand in the London Warehouses, the Dealers' Stocks included, on the 1st of April, 1859 and 1860.

The annexed return, furnished by Messrs Churchill and Simm, shows the stock of wood in the Metropolitan docks on the 1st April:—

	1860.	1859.	1858.
Foreign deals ..... pieces	1,244,000	1,109,000	1,223,000
— Battens and ends	702,000	390,000	559,000
— Fir timber ..... loads	47,900	22,000	54,600
Colonial pine deals and battens. pieces	501,000	786,000	926,000
— Spruce ditto	739,000	563,000	705,000
— Pine timber ..... loads	10,000	8,300	10,800
United States pitch pine timber	2,600	3,500	3,600
East Indian teake	3,800	17,300	6,800

Scotch pig iron has sold slowly, on easier terms, viz., 54s 9d to 55s cash. Spelter has changed hands freely; but other metals have ruled heavy.

The arrivals of tin at this port last month amounted to 12,660 slabs, all of which were Straits, with the exception of 479 slabs Banca, making the imports since 1st January as follows:—

	1860	1859	1858
	slabs	slabs	slabs
Banca	2135	1850	10593
Straits	26567	9102	2800
Total	28702	10952	13393

The present stock here is estimated at 1,300 tons.

The following is the monthly report for Banca tin in Holland:—

Stock in the hands of the Trading Company for the next sale	108638	96248	136839

We have received the annexed quarterly report of the Scotch pig iron trade from Mr Thos. Thorburn:—

The first quarter of 1860 shall ever be memorable in the iron trade. Of the 125 furnaces in blast in January last 80 were stopped for fully five weeks, owing to the "strike" among the colliers and miners at the Govan Works. The production has been in consequence diminished 75,000 tons. The export of pig iron was retarded by political possibilities and the scarcity of tonnage, but, combined with the local consumption, the total quantity absorbed in the quarter just closing amounts to 202,000 tons—the make in the same period being only 170,000 tons, the stock has thus been reduced 32,000 tons, and is now 298,000 tons lying in warehouse keepers' and makers' stores. The perplexities which beset the settlement of Italian affairs at the opening of the year caused declining prices, and as low as 55s 6d was accepted for mixed numbers. But the "strike" and damping of the furnaces, coupled with that great event of commercial and financial importance—the unexpected commercial treaty with France, and the adoption by that country of the principles of free trade, gave a stimulus to the market, and extensive operations were entered into at from 56s 6d to 61s 6d per ton before the fourth of last month. The hopeful anticipations which arose on the appearance of the Imperial programme were, however, neutralised by the distrust and uncertainty excited by the annexation of the Cis-Alpine provinces of Sardinia to France. The price in consequence has gradually declined, with an occasional rally of about 1s per ton, and averaged in January 57s, February 60s, and March 57s 9d. No. 1 Gartsherrie, 58s; No. 1 Coltness and Calder, 56s 6d; No. 3 Gartsherrie, Langloan, and Glengarnock, 55s 3d; Nos. 1 and 3 G.M.B., 55s; mixed Nos. warrants, 55s 3d. Ayrshire brands, 54s 6d to 55s 6d; East Coast brands, 54s 6d for mixed Nos. Bars, 7*l* 5s to 7*l* 15s; plates, 8*l* 10s to 9*l*; rails, 7*l* to 7*l* 10s; railway chairs, 4*l* 7s 6d to 4*l* 15s; iron pipes, 5*l* 5s to 6*l* per ton.

Messrs Powell and Co. allude to the leather trade during the past month as follows:—

The demand has been limited, but the supplies have not been excessive; and, as in the previous month, stocks have not largely augmented, and the alterations in prices have been very slight. The continued dulness has, however, contributed to give a less firm tone to the market for some articles. Whether the large consumption of leather for ordinary and for Government purposes as well as for exportation, which the last returns of the Board of Trade show to be increasing, will avail to bring the prices of leather into a more satisfactory relation to those of the raw material, may be questioned. There is no doubt, however, the longer the buyers continue to purchase as little as possible, the more probable is a reaction; but we think it much safer for the manufacturer to look for a solution of the problem in reduced prices of hides. The transactions in raw goods have been small. At the first public sale there was very little inquiry. The imports have been limited, and former prices, with the exception of East India kips, have been fully supported. We may, however, shortly expect an increased importation, adequate, we hope, to check any further upward tendency.

Messrs Grant, Hodgson, and Co., report the state of the tobacco trade in March as follows:—

At the commencement of last month, there was no apparent change in the character of the market, and business continued quite of a retail description; subsequently an improved demand was experienced, terminating in sales of 950 hhds, viz.:—52 hhds Virginia leaf, and 45 hhds and tierces of strips; 107 hhds Kentucky leaf, 544 hhds strips, and 202 hhds Maryland: of the latter, a very limited quantity of good and useful sorts remain on sale. There has been an increased desire on the part of importers to effect sales, and concessions of a ¼d to ½d per lb have been submitted to for parcels of middling and ordinary western strips. Holders of good end fine sorts have shown more willingness to meet the views of buyers, and two or three parcels were taken at a fractional reduction on previous rates. Fine colouny and bright descriptions are becoming scarce, and are more firmly held. For exportation there was more inquiry, and a few limited sales were made of fine and very common qualities. Latest advices from New Orleans represent a more active demand; quotations were unchanged; about 2,000 hhds had been taken for France; prices had not transpired. The last crop contains a very limited assortment of heavy descriptions. Imported—1,196 hhds. Deliveries—1,045 hhds, against 1,014 hhds in the corresponding month of last year. Stock—17,538 hhds, against 12,655 hhds in 1859; 8,559 hhds in 1858; 10,571 hhds in 1857; 7,646 hhds in 1856; and 10,685 hhds in 1855.

Rum has been in somewhat improved request, on former terms. In brandy, very little has been passing, and the rates have tended downwards. Advices from Cognac bring no change in the quotations.

Linseed oil has sold at 28s to 28s 3d per cwt on the spot. Other oils have ruled about stationary.

The tallow market has been in a very inactive state, and prices have had a drooping tendency. P.Y.C., on the spot, is somewhat freely offered at 55s 9d to 56s per cwt.

"The demand for dry goods," observes the New York *Shipping List* of the 24th ult., "continues moderate. The bulk of the Southern trade is over, but there are purchases for shipment South still effected to a considerable extent. All kinds of cotton fabrics remain steady at previously quoted rates. Woollen goods are quiet, and prices nominally unchanged. Foreign goods continue dull, except for favourite patterns and makes, which sell freely at full prices. The auction sales continue to be well attended, but the bidding is not very spirited, and the prices realised are rarely satisfactory."

The cotton market continues depressed. A very moderate amount of business has been transacted. The lower qualities of American are again cheaper by ⅛d to ¼d per lb. The better qualities have shown little variation. Egyptian are more freely offered, and we are compelled slightly to reduce our quotations. Brazil show little or no change. East India still tend downward. The sales to-day are 7,000 bales. The market continues heavy. The reported export amounts to 6,950 bales, consisting of 3,690 American, and 3,260 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Although there has been much less activity in the demand for goods in the manufacturing districts, both for home use and export, prices generally have continued steady, and merchants have shown no disposition to accept lower prices in any instance. Stocks are still unusually low for the time of year, the operatives are well employed, and machinery is running full time. In iron a very limited business has been passing, on easier terms. Coals, however, have continued in active request.

MANCHESTER, April 5.—This market has been quiet, but the length of engagements on hand has kept prices in general moderately firm. India buyers have been without fresh intelligence on which to act, and their goods, in particular shirtings and T'cloths, have been chiefly supported of late by previous transactions for China. Offers for India have been current at 1⅛d per piece under last week's rates, but little has been done. A few purchases have occurred of 40's and 50's mule, the latter of which had been for some time neglected. Continental buyers have been restrained by the aspect of European politics. An advance on the wages of spinners and other operatives has been paid at Preston and various other districts.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

HUDDERSFIELD.—Fancy mixtures in crapes, diagonals, and doeskins, at about 4s per yard, continue in good demand, as also the best class of fancy trouserings, which are still ordered freely. The Bedford and woollen cord trade keeps brisk, although profits are complained of as being scarcely remunerative. In the local wool trade there has been a steady and satisfactory business doing.—— LEEDS.—Buyers are very careful, and confine themselves either to articles they particularly require, or else speculate in any job lots which offer. The clothiers in the district continue pretty busy, but their orders are now nearly worked out. In the flax trade there is a fair demand for several classes of yarns.——ROCHDALE.—Generally the demand has been languid for flannel. Yorkshire goods are very little inquired after, and are held firmly.—— BRADFORD.—Wool remains quiet, but prices continue firm. The amount of business done has been very small indeed. Spinners of worsted yarns are still working to order, and the machinery is fully employed. Cotton yarns are much the same as last week.—— LEICESTER.—There is an average amount of business doing in the hosiery trade. At Loughborough and Hinckley trade is active. Yarns are in fair request, and prices remain much the same. Spinners continue tolerably employed. Wools are firm, at high prices for superior qualities. ——NOTTINGHAM.—The lace trade is quiet, and in very few branches is there as much doing as is usual at the present time of the year. The hosiery trade continues in a satisfactory condition; many branches are busy, and all good workmen are well engaged. At Sutton-in-Ashfield, and several other country districts, the hosiery trade is in a healthy state. ——DUNDEE.—The market generally has ruled firm at full prices.—— BELFAST.—No quotable change has taken place in the value of produce or manufactures.——BIRMINGHAM.—The trade of this town continues quiet. In South Staffordshire and East Worcestershire the manufacturing trades show symptoms of more activity than those of this town, and labour in every department is in full employment.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, March 24.—FLOUR AND MEAL.—The market for State and Western flour remains unaltered, only a moderate demand having prevailed, which has been confined almost exclusively to the requirements of the local and Eastern trade. Some kinds advanced 5 cents per bbl on the lower grades. Canada flour is in better demand, and prices are stiffer; the sales comprise 1,050 bbls, including 300 yesterday, at 5.50 dols to 7.25 dols per bbl. Southern flour of all kinds continues to be wanted at full prices. Rye flour is steady and unchanged. Export of wheat flour from 1st to 20th March, 37,379 bbls, against 32,772 bbls in 1859.

GRAIN.—The market for all kinds of wheat has been unusually depressed, and to effect sales to any extent a considerable reduction in prices would have to be conceded. The receipts are very light as yet, but, with favourable weather, pretty large quantities are looked for. The sales during the three days have been very light, having reached only 5,250 bushels, including 1,250 white Indiana at 1.64 dol to 1.65 dol; 500 Milwaukee Club, 1.25 dol; 300 amber Michigan, 1.50 dol; 700 white Kentucky, 1.70 dol; also, 500 ditto, 1.72 dol; and 2,000 red

Western, 1.47 dol, yesterday. Corn has been in moderate request, and the market has ruled heavy, with a declining tendency in rates. Export from 1st to 20th March: wheat, 8,747 bushels, against 600 bushels in 1859; corn, 32,029 bushels, against 17,792 bushels in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Most of the markets held since we last wrote have been very moderately supplied with wheat, in, for the most part, somewhat improved condition. Although the demand for all kinds has been much less active than in the previous week, prices generally have been well supported, and, on the whole, good clearances have been effected. Both here and at the outports, foreign wheat has changed hands at extreme quotations. The small quantities of barley on offer have sold readily, but we have no further advance to notice in prices. Oats, beans, and peas have moved off, chiefly in retail quantities, but at full currencies. No advance has, as yet, taken place in the value of flour equal to the rise in wheat: consequently, millers' profits are now very small. It is asserted, however, that the consumption of flour in London is small, when compared with some former years; but we believe that there is now a very keen competition for business on the part of the country millers, who are now forwarding very large supplies of flour to the metropolis, and of a very superior quality.

Most of the markets on the Continent have ruled firm for wheat, on higher terms, and some large parcels have changed hands for export to England in the spring. Barley and all other articles have sold steadily, at very full prices. In the United States, flour has produced rather more money; but flour and Indian corn have had a drooping tendency. The shipments continue on a limited scale.

The Scotch markets have been tolerably well, but not to say heavily supplied with wheat. All good and fine samples have moved off freely—other kinds slowly, at the late improvement in value. The spring corn trade has ruled healthy.

In Ireland, produce generally has commanded more attention. However, very little change has taken place in prices.

This being a close holiday, no market has been held here, to-day; but, both on Monday and Wednesday, wheat and all other articles of produce were in steady request, at fully previous rates.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, THURSDAY MORNING.

SUGAR.—The market opened flatly, and rather easier rates were in some cases accepted for low to middling qualities. Yesterday, the strong kinds of Siam brought forward found ready buyers at the full valuations, and two floating cargoes of foreign were reported sold for this kingdom. West India remains quiet, the quantity sold in two days being only 250 casks. Arrivals keep moderate. The deliveries are steady, and the stock at this port is about 49,500 tons, against 43,000 tons last year, 42,000 in 1858, and 38,250 tons in 1857 at the same period. The stock of Great Britain may be computed at 90,000 tons, against 75,000 tons last year, 70,000 andtons in 1858.

Mauritius.—10,220 bags offered by auction only partly found buyers at previous rates to 6d decline: low to good yellow, 40s to 44s 6d, including grainy; low to good brown, 33s to 38s 6d; crystalised grey, 43s to 46s per cwt. Some few of the bought-in parcels have since been sold.

Madras.—834 bags native brought 32s to 35s per cwt for brown and yellow.

Penang.—670 bags brought 38s to 42s 6d per cwt for brown to good soft yellow.

Foreign.—Of 3,160 bags clayed Manilla, about 800 bags sold at 38s 6d for middling, the remainder being held above the value. 120 baskets Java brought 40s 6d to 42s 6d; brown, 39s to 39s 6d. 3,220 bags sold with some animation: strong greyish yellow to white, 43s to 47s; soft, 40s 6d to 42s 6d; brown, 38s 6d to 39s. A cargo of Rio Grande has sold for the United Kingdom at 24s; and also a cargo of Havana, No. 12, at 28s 3d per cwt.

Refined is quiet and rather cheaper. Low goods quoted 51s to 51s 6d per cwt. Crushed and pieces offer upon easier terms than before.

RUM.—Common kinds still meet with partial inquiries. 250 casks of East India have been sold at 1s 7d per proof gallon, and some few transactions are reported in West India at last week's rates.

COFFEE.—Business has been restricted by the diminished supplies offering, but all descriptions remain exceedingly firm, and two floating cargoes of foreign have sold at high prices. 60 casks plantation Ceylon by auction, yesterday, went at 70s to 75s 6d for low middling to middling; and 342 casks, &c., 877 bags native, at 60s to 65s for good ordinary to good. A floating cargo of good firsts Rio is reported at 60s for the Baltic, and one of St Domingo at 62s per cwt for a near port.

COCOA.—Nothing of interest has transpired by private contract, and there are several sales announced for to-day.

TEA.—The transactions have been of a most limited character, and several kinds are offering at the low rates established in the sales last week. Common congou is nominally 1s 4d per lb.

RICE.—A strong demand continues to prevail, especially for soft grain kinds, and considerable transactions having taken place, holders are in many cases asking higher rates. Privately, white Bengal has sold at 9s 6d to 13s for low to good; old Moulmein, Necrsncie, and Rangoon, from 8s 4½d to 9s 4½d; new Moulmein, 9s 6d to 9s 7½d; pinky Madras, 9s 6d to 10s per cwt. 1,000 bags old Necrancie Arracan, by auction, were bought in at 10s 6d. 4,750 bags Java sold at high rates: low middling broken to good white, 11s 6d to 14s 6d; fine, 16s to 16s 6d per cwt.

IMPORTS and DELIVERIES of RICE to March 31, with STOCK on hand.

	1860. tons	1859. tons	1858. tons	1857. tons
Imports	6700	6230	28850	12600
Deliveries for home use	15000	5210	7650	9100
Exported	6370	5440	4000	15400
Stock	58120	81700	84400	42900

SPICES.—Further reduced rates have been accepted for white pepper, but 521 bags by auction all sold at 6⅞d to 6¾d for Singapore and Penang. Privately, Singapore black has realised 4 1-16d. At public sale, 1,040 bags middling Penang went at 3⅞d to 4d. 62 cases brown nutmegs sold without material change in value: small, 1s 5d to 1s 8d; middling to good, 1s 9d to 2s 8d; fine, 3s 9d. 51 cases mace, low and out of condition to middling, 1s to 1s 5d per lb. Good cassia lignea has sold by private treaty at 96s per cwt for pile 1, owing to large arrivals.

SALTPETRE.—This article is firm, but there has been less inquiry. A parcel of Bengal to arrive has sold at 44s. 1,609 bags offered by auction were partly disposed of: refraction 13¾, at 39s 6d; 4¾ to 2¾ bought in at 44s 6d to 45s per cwt.

IMPORTS and DELIVERIES of SALTPETRE to March 31, with STOCK on hand.

	1860. tons	1859. tons	1858. tons	1857. tons
Imported	3600	5310	2320	3000
Delivered	3600	4760	3640	2710
Stock	3850	3500	5100	2350

Delivered last week 270 tons.

COCHINEAL.—The market has been dull, and 530 bags about one-fourth part sold without material variation in prices: low to good Honduras silvers, 3s to 3s 10d; blacks, 3s 7d to 4s 3d; Teneriffe silvers, 3s 2d to 3s 5d; blacks, 3s 7d to 4s 1d; Mexican black, 3s 5d to 3s 6d per lb.

OTHER DYESTUFFS.—Gambier is quiet. Of 1,885 bales, a few lots sold at 16s 9d for good; the remainder being held at 16s 9d to 17s. Cutch is again cheaper, and 2,676 bags only partly met with purchasers, at 26s 6d to 27s. Bengal Turmeric was bought in at 16s. 60 bales Bengal safflower went from 6*l* 12s 6d to 9*l* 2s 6d per cwt.

LAC DYE remains inactive. 226 chests offered yesterday were bought in, and there is not much business passing in the article by private contract, although holders remain firm.

RUBBER.—A small quantity of East India sold at 2s, and some fine Para at 2s 4½d per lb. Stocks of the former are still very moderate.

DYEWOODS.—Manilla Sapan has been disposed of at 6*l* 7s 6d to 7*l* 15s. Good Siam is held firmly. Red Saunders in the public sales realised 5*l* 12s 6d per cwt.

DRUGS.—The market is quiet. Camphor has sold at 8*l* per cwt.

OILS.—There has not been any change of importance in these markets, and prices generally are stationary. Linseed has sold at 28s per cwt. Rape dull.

SPIRITS OF TURPENTINE have advanced to 36s 9d per cwt for American, and there is now a better feeling in the market.

HIDES.—The public sales of East India held this morning went off flatly, there being few export orders here.

METALS.—The most important feature of the week has been the increased business done in spelter; 525 tons finding buyers yesterday at 20*l* 10s to 20*l* 12s 6d per ton, which was rather under the previous nominal quotation. The stock of 3,110 tons is about the same as in 1859. British copper cannot be obtained at the reduction made last week. Foreign tin remains inactive, but it is not offered upon lower terms. Small sales of good Straits have been effected at 131s per cwt. Scotch pig iron has declined to 55s per cwt.

HEMP.—Sales of Manilla continue to be restricted by the high pretensions of holders. A small parcel of fine selected quality has sold privately at 33*l* 10s. Petersburg clean is firm at the late advance.

JUTE.—Large public sales were held yesterday, viz., 10,250 bales, which passed off very flatly, and about 1,500 bales only sold at the previous value. The stock is 12,200 tons, against 8,900 last year, and 3,600 tons in 1858.

TALLOW.—Quotations of foreign have further receded 6d to 1s, on the spot or for early deliveries, at which decline a moderate business has been done, but the market is now quiet again. 1st sort Petersburg Y. C., 56s to 56s 3d: April to June, 54s 6d; and for the last three months of the year, 52s 3d per cwt demanded.

PARTICULARS OF TALLOW.—Monday, April 2.

POSTSCRIPT. THURSDAY EVENING.

SUGAR.—There was only one sale of sugar to-day, viz., 1,176 bags Penang, which went off steadily at 38s to 43s 6d for low soft to good yellow. 700 baskets Java sold privately, No. 11½ at 43s; and 1,300 bags low Siam at 31s 9d per cwt. The week's business in West India amounted to 500 hhds.

COFFEE.—51 casks plantation Ceylon found buyers at full prices.

COCOA.—1,309 bags Guayaquil were bought in at 73s to 74s per cwt.

RICE.—4,275 bags Bengal were bought in at 10s 6d to 13s 6d for low middling to good white. 1,000 bags old Moulmein were taken in at 9s 6d. About 8,000 bags have sold by private contract.

SALTPETRE firm, with buyers for arrival at 44s per cwt.

LAC DYE.—140 chests were partly sold: middling at 9d; good, 1s 3d to 1s 3½d per lb.

GAMBIER.—1,107 bales were taken in at 16s 9d per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very quiet this week. Grocery lumps sold at 51s. For export, nothing doing. The demand for Dutch crushed here is not worth noting.

GREEN FRUIT.—The market is depressed, owing to large arrivals. Many cargoes of oranges being out of condition, combined with the weather not being favourable for consumption, has caused prices to be lower. Some cargoes of oranges, sold by Keeling and Hunt at public sale, went at a reduction of 1s to 2s per package. Lemons dull. Nuts of all kinds easier for purchasers, but as the Easter holidays are approaching, the market is expected to rally.

DRY FRUIT.—The market continues stagnant. At public sale a small parcel badly damaged currants sold without reserve from 29s to 30s. Selected Valencias bought in at 45s. Clearances continues on a fair scale.

ENGLISH WOOL.—Rather a better feeling in the demand. In prices, however, no change has taken place.

COLONIAL AND FOREIGN WOOL.—The market is without change.

HEMP AND FLAX.—In flax nothing is doing. The hemp market is steady this week at the quotations.

COTTON.—No reported sales in cotton this week.

SILK.—The market is unchanged. The demand is still inactive; yet prices are without alteration.

TOBACCO.—A steady demand has continued for most descriptions, but chiefly for good and fine sorts of home trade qualities, at irregular prices, especially for middling and ordinary. Leaf of fine export quality, stock of which is very limited, has been more inquired after.

LEATHER AND HIDES.—There was not any improvement, either in the demand or value of leather at Leadenhall this week. A fair average amount for the season of the year was sold at previous rates.

METALS.—There is little to remark on the state of the market, which is flat, as for some time past. Copper has had some attention at the last reduction, and buyers to a considerable extent have come forward. Prices for all descriptions are very firm. Iron does not rally in demand, and prices are a trifle easier. Scotch pig keeps pretty steady, at last week's decline. Lead is barely so buoyant. Spelter has changed hands to the extent of 500 tons on the spot and for arrival, but there is little life in the market. Tin is a trifle easier for foreign; English without change. Tin plates in moderate demand.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	56	6
Fat by ditto	2	11½
Yellow Russian	57	6
Melted stuff	41	0
Rough ditto	24	0
Greaves	16	0
Good dregs	7	0

Imports this week 474 casks.

METROPOLITAN CATTLE MARKET.

MONDAY, April 2.—The total imports of foreign stock into London last week amounted to 2,602 head. In the corresponding week in 1859 we received 2,801; in 1858, 1,620; in 1857, 1,194; in 1856, 722; in 1855, 534; and in 1854, 1,629 head.

From our own grazing districts the arrivals of beasts fresh upthis morning were rather on the increase, and in somewhat improved quality. The best Scots and crosses were in fair request, at full prices. Otherwise the beef trade was in a sluggish state, and in some instances the quotations ruled a shade lower. The extreme value for Scots was 4s 10d per 8 lbs. We were moderately well, but not to say heavily supplied with sheep. The best Downs and half-breds moved off steadily at very full prices. Most other breeds were dull, but not cheaper. The best Downs in the wool sold at 5s 8d, out of the wool 4s 8d per 8 lbs. The lamb trade was somewhat active at extreme rates, viz., 6s to 7s per 8 lbs. Calves were in short supply and improved request at 2d to 4d per 8 lbs more money.

SUPPLIES.

	April 5, 1859.	April 4, 1859.	April 2, 1860.
Beasts	2808	3290	3810
Sheep and Lambs.....	14280	20200	22070
Calves	67	51	130
Pigs	370	350	330

THURSDAY, April 5.—The lamb trade was exceedingly good to-day, the demand being active and very high prices obtained, the quotations being from 6s to 7s 8d per stone of 8 lbs, being at the rate of from 9d to 11½d per pound. There were very few good beasts on offer, and the supply of inferior descriptions was short; the beef trade therefore ruled steady. The mutton trade was tolerably good and prices firm, a fair clearance being effected. Veal and pork was in good demand, at previous prices. Price per stone of 8 lbs, sinking the offal.—Beef, 3s 4d to 4s 8d; mutton, 4s 4d to 5s 8d; veal, 4s 8d to 6s; pork, 3s 8d to 4s 8d. Head of cattle at market:—Beasts, 720; calves, 253; sheep, 7,170; pigs, 140.

HOP MARKET.

BOROUGH, Monday, April 2.—Our market during the past week has exhibited but little change, the business transactions being very limited, and mostly induced by some concession in value. Our currency is nominally as follows:—Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, April 2.—During the past week the arrivals coastwise have been moderate, but still more than equal to the demand. The trade continues very heavy. The following are this day's quotations:—York Regents, 90s to 150s; Lincolnshire ditto, 80s to 95s; Dunbar ditto, 100s to 120s; Perth, Forfar, and Fifeshire ditto, 80s to 100s; ditto Rocks and reds, 75s to 85s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, April 5.—The supplies of home produce have been moderate at this market since our last report, principally by water conveyance, and trade generally keeps pretty active, at fully previous rates. York Regents, from 160s to 180s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto Cups, 90s to 100s; Dunbars, 100s to 105s per ton.

COAL MARKET.

WEDNESDAY, April 4.—Bower's West Hartley 16s—Byass's Bebside West Hartley 16s—Hastings' Hartley 16s—Howard's West Hartley 15s 9d—Tanfield Moor 12s 6d—Tanfield Moor Bute's 12s 6d—Wylam 16s. Wallsend:—Acorn Close 19s 3d—Eden 19s 3d—Kepier Grange 19s 3d—Heugh Hall 19s 3d—Kelloe 19s 6d—North Hartlepool 15s 6d. Carway and Duffryn Malting 23s—Firth's Robin Hood 14s 9d. Ships at market, 25; sold, 25.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

THURSDAY, April 5.—Our market is rather quiet, continental politics exercising a depressing influence, and inducing buyers to continue to act with great caution and restrict their purchases to actual requirements only; prices, however, have not undergone any alteration yet, as stocks are but light.

METALS.

(FROM OUR OWN CORRESPONDENT.)

THURSDAY, April 5.—The market for manufactured iron has, throughout the past week, continued without change in prices, but with only a limited demand. In Scotch pig iron there has been less depression, and a fair business has been done during the week. For copper, there has been rather more inquiry since the recent reduction in price. Little doing in lead. Other metals remain as before.

The Gazette.

TUESDAY, April 3.

BANKRUPTS.

E. Underwood, Soham, Cambridgeshire, grocer.

EPITOME OF RAILWAY NEWS.

GREAT WESTERN OF CANADA.—The half-yearly meeting of this company was held on Wednesday. The chairman, in moving the adoption of the report, stated that when it was before the directors in proof they received a letter from Mr Brydges, the managing director, stating that he had seen Mr Galt, the Minister of Finance, and that it had been arranged that the interest on the Government loan should not be called for during three years, and as the board understood it that no interest would be charged, or that the Minster would forego the interest for that period, they had stated in their report that a 2 per cent. dividend would be declared; but now they had to make an unpleasant correction of that paragraph, because they had since been informed, on the arrival from Canada of Mr Reynolds, their financial director, that such was not the case, but that the Minister was willing to allow the interest on the Government loan to stand over for three years as a loan to the company, with a view to help them over the depression. They had since received an official intimation from the Government of Canada that the interest would not be called up for three years, and that it would stand over as a loan at 6 per cent. He (the chairman) thought it would not do to pay a dividend with borrowed money. They had paid off all their floating debt, and therefore they did not want to borrow money at 6 per cent.; so that, instead of paying a dividend as stated in the report, the directors had resolved not to do so.

LONDONDERRY AND ENNISKILLEN.—The directors of this company have agreed, subject to the aproval of the shareholders, to lease the undertaking to the Dundalk and Enniskillen Railway Company. The lease is to commence on the 1st of January, 1860, for a period equal to perpetuity, at a rental of 26,000*l* per annum, for three years; then to be increased by 20 per cent., on the gross receipts from the two railways, exceeding 95,000*l* per annum, till the yearly rent amounts to 33,000*l* per annum, when it is to remain at that sum. The rent is to be paid weekly, without any deduction. The Dundalk Company are to take the severed lands, and to carry out all agreements and contracts entered into by the Londondrry and Enniskillen Railway Company, excepting the completion of their land purchases.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending March 24 amounted to 463,310*l*, and for the corresponding week of 1859 to 432,430*l*, showing an increase of 30,880*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 194,272*l*, and for the corresponding week of last year to 185,985*l* showing an increase of 8,287*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, April 2.—The firmness of Consols acted favourably upon the railway market, several of the heavier stocks closing at an advance. There were few transactions in the foreign market, and some of the smaller undertakings exhibited an adverse tendency. San Paulo left off ⅜ to ½ discount, and Lombardo-Venetian 1¼ pm. The proposed dividend of the latter for the year 1859 is 22½ francs per share, with a reserve of 220,000*l*. In American railway securities an improvement occurred in the bonds and shares of the Illinois Central, Michigan Southern bonds, and New York Central shares. Mines were heavy, except St John del Rey, in which a further rise took place.

TUESDAY, April 3.—The railway market was very firm, and showed an advance of ¼ to 1¼ per cent. Midland and Great Northern A stocks presented the principal improvement. The colonial market was less buoyant than the home, but several Indian guaranteed descriptions were slightly higher. Grand Trunk of Canada stock advanced 1 per cent., to 35 to ½; and Great Western shares an eighth, to 13⅜ to ½. French railways improved. Lombardo-Venetian were likewise firm in the morning, but subsequently went to 1¼ pm., or the same as yesterday. American railway securities were steady. Mines were dull, and in one or two cases the closing quotations showed a decline.

WEDNESDAY, April 4.—The railway market was steady, and at one period experienced a further improvement. A reaction, however, afterwards took place, and the closing prices were about the same as yesterday, a few stocks exceptionally showing a slight advance or decline. The principal feature in the colonial market was a fall in the shares of the Great Western of Canada, on the non-declaration of a dividend at the meeting this morning. Indian guaranteed were firm, East Indian especially, closing 101¾ to 102¼. In foreign descriptions, Pernambuco, Lombardo-Venetian, and Great Luxembourg improved. Pernambuco were finally quoted 1¼ to 1 dis., and San Paulo ⅜ to ¼ dis. The only change of importance in mines was a relapse in St John del Rey.

THURSDAY, April 5.—A further rise took place in most British descriptions, Great Northern, both the ordinary and A stocks, Midland, Lancashire and Yorkshire, and North-Eastern showed the chief improvement. A partial reaction, however, occurred before the close, but the market remained firm. In colonial descriptions there was another rally in Great Western of Canada. Grand Trunk also improved to 35½ to 36, and Indian guaranteed stocks were firm. French shares, except Eastern of France, advanced, but in other foreign railways no alteration of importance took place. Mines were little dealt in, and occasionally showed a reduction.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH
Is the only STARCH used in
HER MAJESTY'S LAUNDRY.
And as some unprincipal Parties are now making and offering for Sale an Imitation of the
GLENFIELD STARCH,
we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.
WOTHERSPOON and CO., Glasgow and London.

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.
St Paul's churchyard, London.

HOLLOWAY'S PILLS AND OINTMENT.—Inflaenza, Bronchitis.—At the beginning of spring chest complaints are continually produced by the East wind and variable temperature. In all such cases early attention and effective treatment are demanded to prevent them degenerating into more serious and often fatal maladies. The invalid may rest assured that Holloway's Pills, without worrying the weakest constitution, will remove all formidable symptoms. The Ointment should be rubbed on the chest, back, and sides, every night and morning, for at least ten minutes, and the parts then encased in flannel. This course of treatment will lessen fever, rectify incipient congestion, release the oppressed lungs, and remove restlessness, hoarseness, and cough. Thorough restoration will reward diligence and attention in following this advice.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer,
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.
WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,413. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 40,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Berry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners prove that a half-pint of DR DE JONGH'S Oil is equal in remedial effects to a quart of any other kind. Hence as it is incomparably the best, so it is likewise far the cheapest.
Palatableness, speedy efficacy, safety, and economy unitedly recomend this unrivalled preparation to invalids.

Opinion of A. B. GRANVILLE, Esq., M.D., L.R.C.P., F.R.S., Author of "The Spas of Germany," "On Sudden Death," &c.
"Dr Granville has found that DR DE JONGH'S Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Newfoundland Oils. The Oil being, moreover, much more palatable, Dr Granville's patients have themselves expressed a preference for Dr De Jongh's Light Brown Cod Liver Oil."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.
SOLE CONSIGNEES,
ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"G. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

THE HUMAN HAIR
Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included
Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

Certain Means of Self-Cure Gratis.

THE NEW FRENCH REMEDY as prepared by the ECOLE PHARMACIEN, PARIS, has been used by the most eminent of the Medical Faculty on the Continent for several years, with great success, and has been found a certain remedy for effectually restoring the Nervous and Debilitated to a state of vigorous Health and Manhood, when the Nervous System has been weakened by the Errors of Youth, or from any other cause. All Impediments to Marriage are speedily removed by this wonderful discovery. Full particulars forwarded gratuitously to any address, with every instruction for SELF-CURE, on receipt of a stamped directed envelope, by MONS. DUVAL, Patent Medicine Agent, Birmingham.

Just published, in 1 vol. 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,

VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.
By A PHYSICIAN, &c., &c.
(Registered under the New Medical Act).
Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternost row; and all booksellers in town or country.

MEDICAL ADVICE.

The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.
Consultations from 10 till 11, and 6 till 8. Sundays from 10 till 1.

IMPORTANT STANDARD BOTANICAL WORK
WITH NATURE-PRINTED PLATES.
Complete, price 6l 6s, half-bound, in Imperial Folio, with 51 plates.

THE FERNS OF GREAT BRITAIN

and IRELAND. Nature-Printed by HENRY BRADBURY. With full descriptions of the Species and Varieties, by THOMAS MOORE, F.L.S.; Edited by Dr LINDLEY.

"This magnificent folio is the first-fruits of the Nature-drinting process in this country. Those who have made the study of Ferns the recreation of their leisure hours will be delighted with this volume, not only as representing their old favourites in a truly living form, but on account of the great attention given to the representation of varieties, and the appearance of the plants in every stage of their development. Nothing is more puzzling to the young botanist than the varieties of form which the same species of Fern assumes according to locality and other circumstances. These cannot be made evident by descriptions alone; and certainly in no instance has any author ever attempted to illustrate so large a number of varieties of Ferns as are found here. Of the way in which they are Nature-printed in this book, we can safely say they are better done than anything of the kind we have seen before. Such beautiful representations of natural objects deserved good illustrative letter-press, and in the services of Mr Moore and Dr Lindley, Mr Henry Bradbury has enjoyed the aids of competent science. The description of the species, the synonyms, and the general remarks, are more extended then in any work hitherto devoted to the British Ferns. —ATHENÆUM, April 27, 1857.

"In the magnificent work written by Mr MOORE, edited by Dr LINDLEY, and illustrated by M. HENRY BRADBURY, we find the solution to the problem how to make Nature herself paint her own portraits with the most scrupulous fidelity.....We have here, on fifty-one large plates, pictures of all our British kinds of Ferns, with their principal variations of form presented to us with precisely the same appearance as would be exhibited if the living species were placed flat upon sheets of white paper. The mere tyro may identify in a few minutes any species by simply placing the living leaf side by side with its portrait, which reproduces it in the minutest detail and in its natural dimensions. In turning over the beautiful plates, it is hard to say which is most to be admired—the elegance and delicacy of the objects represented, the almost miraculous fidelity with which they have been produced, or the ingenuity and patience by which such results have been obtained. Not merely the forms, but the delicate veining of the foliage, and the fruit-heaps on the fertile leaves are brought clearly out; the veins, indeed, appear more distinctly than in the real objects, and in this respect are an assistance to the botanist in deciphering, as it were, the Fern itself.....Though the Volume on the British Ferns is what the French term an ouvrage de luxe, and, as such, deserves a place in the drawing-room wherever a love of Nature exists, it is not alone valuable for its pictorial merits. The text which accompanies the plates is written by one whose knowledge of the British Ferns is surpassed by none, and whose views on their classification are just and sensible."—QUARTERLY REVIEW.

Bradbury and Evans, 11 Bonverie street.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS

on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising Instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: JohnChurchill; and may be had of al booksellers.

AT HAMBLY HOUSE ACADEMY

Streatham Commen, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

ROYAL ITALIAN OPERA,

COVENT GARDEN.

The Nobility, Gentry, Subscribers, and the Public are most respectully informed, that the Season of 1860 will commence on Tuesday next, April 10, on which occasion will be performed Meyerbeer's New Romantic Opera, entitled, DINORAH; or, Il Pellegrinaggio di Ploërmel; Dinorah, Madame Miolan Carvalho (her 7th appearance in England); Una Caprais, Mdlle Rapazzini (her first appearance in England); Un Capraio, Mdlle Geidita Sylvia (her first appearance in England); Corentino, Sig. Gardoni; Un Cacciatore, Sigr Taglafico; Un Mietitore, Sig. Neri Baraldi; and Hoel, Monsieur Faure (for whom that part was originally composed, his first appearance in England.)

Conductor, Mr Costa.

The Opera will commence at Half-past 8 o'clock. Pit tickets, 10s 6d; Ampitheatre Stalls, 7s and 5s; Ampitheatre, 2s 6d.

Prospectuses, with full particulars of the arrangements, may be had at the box-office under the portico of the theatre; and at the principal music sellers and librarians.

THE GREAT EXHIBITION OF 1851

—Council Medal, Exposition Universelle, 1855—Grande Medaille d'Honneur.—Gallery of Bronzes d'Art.—F. BARBEDIENNE and CO., of Paris, respectfully inform the British public, that a complete COLLECTION of their MATHEMATICAL REDUCTIONS (by the process of M. Collas) from the CHEF d'ŒUVRES of ANTIQUE and MODERN STATUARY in the Galleries of of the Louvre, Florence, and Rome, Museum of Naples, and British Museum, may be seen at Messrs JACKSON and GRAHAM'S, 35, 37, and 38 Oxford street. The Prices the same as in Paris, with the charges of importation only added. Catalogues, with marginal illustrations, may be had free on application. N.B. A large and splended collection of Ornamental Clocks, Vases, Candelabra, and other objects of taste.

MODERATEUR LAMPS,

4s each; Colza Oil, 4s per gallon.—This oil is of the finest quality and of greater illuminating power than any before offered to the public. The variety of elegant Moderateur Lamps, Gas Chandeliers, Brackets and Hall Lanterns in these extensive show-rooms, and the extreme low prices, are particularly recommended to the attention of purchasers. Also, the immense stock of fashionable Stoves, Fenders, Fire Irons, superior Cutlery, Tea Trays, Baths, and Japan Ware, brilliant Electro-Silver Plate, General Furnishing Ironmongery Goods, &c. &c., will be found the most extensive in London, and the prices are all marked in plain figures—Panklibanon, 56 and 58 Baker street. Illustrated books sent free. N.B.—Registered Fire Guards, 10s each.

LILLE COLZA OIL

for MODERATOR LAMPS, 4s and 4s 6d per Gallon. It being essential in order to obtain brilliancy of light to have Oil that is perfectly bright and pure,—most especial care is taken by

WHITMORE and CRADDOCK

in selecting only from the finest parcels imported into this country, and they guarantee its delivery in precisely the same fine condition as when drawn from the tanks at Lille. Its burning qualities are unsurpassed by any known Oil at present in use. Delivered free of charge, anywhere within six miles, and by railway in casks of 15 gallons each and upwards.

WHITMORE and CRADDOCK.

The City Oil and Candle Depot, 16 Bishopsgate street within, London, E. C. Lists free.

ALLEN'S PATENT

PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand, London.

FLEET STREET.
A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST,

52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

DR ROBERT ROWE ON INDIGESTION.
This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES,

Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street. Portman square, London.

CROSSE AND BLACKWELL,

Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufacturer. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

SPRING AND SUMMER ATTIRE.—

E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have ransacked the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of Minories and Aldgate, and corner of New Oxford street and Hart street.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the History of British Costume, with self-measurement and list of prices, gratis on application, or post free.

SPECIAL NOTICE.—E. MOSES and SON'S Establishments will be closed on Friday the 13th, and will be re-opened on, as usual, Saturday evening the 14th instant, at ½-past 6 o'clock.

THE "INDISPENSABLE" SUIT,

made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

THE GREAT EASTERN.—

An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

POSITIVELY THE LAST SEASON.

DR KAHN, IN RETIRING FROM

the position he has so successfully occupied for many years, takes this opportunity of thanking most cordially the public who have so liberally supported and rewarded his exertions, and begs to inform his numerous patrons that this is the last season of his popular lectures Dr Kahn will continue to deliver his Lectures on the "Philosophy of Marriage," daily at 3 and 8, at his Museum, top of the Haymarket. Admission, One Shilling.

Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

TEETH.—MR ESKELL,

Sargeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic), and Bennett's hill, Birmingham. Established 1847.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

Tin Dish Covers, 6s 6d the set of six; Block Tin, 12s 3d to 27s the set of six; elegant modern patterns, 35s 6d to 62s 6d the set; Britannia Metal, with or without silver plated handles, 3l 11s to 6l 8s the set; Sheffield Plated, 10l to 16l 10s the set; Block Tin Hot-Water Dishes, with wells for gravy, 12s to 30s; Britannia Metal, 22s to 77s; Electro-Plated on Nickel, full size, 11l 11s.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY CATALOGUE may be had gratis, and free by post. It contains upwards of 400 Illustrations of his illimited stock of Electro and Sheffield Plate, Nickel Silver, and Britannia Metal Goods, Dish Covers, and Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gasoliers, Tea Urns and Kettles, Tea Trays, Clocks, Table Cutlery, Bathe and Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Furniture, &c., with List of Prices, and Plans of the Sixteen large Show-rooms, at 39 Oxford street, W.; 1, 1A, 2, and 3 Newman street; and 4, 5 and 6 Perry's place, London.—Established 1820.

FREDERICK DENT, Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street north, Strand, W.C.

THE COMMISSIONERS OF INLAND REVENUE

deem it right to give Public Notice that, by an Act passed on the 3rd instant, 23rd Victoria, Cap. 15, the following Stamp Duties are now payable:—

SCHEDULE.

AGREEMENT for a Lease or Tack of any Lands, Tenements, Hereditaments, or Heritable Subjects for any Term not exceeding Seven Years; and Agreement, Minute, or Memorandum of Agreement, containing the Terms and Conditions on which any Lands, Tenements, Hereditaments, or Heritable Subjects are let, held, or occupied for any such Term as aforesaid —The same Duty as on a Lease or Tack for the Term, Rent, Consideration, and Conditions mentioned in such Agreement, Minute, or Memorandum.

Provided that any Lease or Tack of the same Lands, Tenements, Hereditaments, or Heritable Subjects afterwards made, in pursuance of and conformably to any such Agreement, Minute, or Memorandum, which shall have actually paid the Duty payable on such Lease or Tack as aforesaid, shall not be chargeable with any higher Stamp Duty than Two Shillings and Sixpence, exclusive of progressive Duty, notwithstanding any Variation in the Terms or Conditions only, not affecting the Stamp Duty; and in any such Case the Lease or Tack shall, if required for the sake of Evidence, be stamped with a particular Stamp for denoting or testifying the Payment of the full and proper Stamp Duty on the Agreement, Minute, or Memorandum, on the same and the Agreement, Minute, or Memorandum being produced, and appearing to be executed or signed, and duly stamped in all other respects.

AGREEMENT, or any Minute or Memorandum of an Agreement, made in England or Ireland under Hand only, or made in Scotland without any Clause of Registration, and not otherwise charged nor expressly exempted from all Stamp Duty, where the matter thereof shall be of the Value of Five Pounds or upwards, whether the same shall be only Evidence of a Contract, or obligatory upon the Parties from its being a written Instrument; together with every Schedule, Receipt, or other Matter put or endorsed thereon or annexed thereto—Duty, 6d.

And where the same shall contain 2,160 Words or upwards, then for every entire Quantity of 1,080 Words contained therein over and above the first 1,080 Words a further progressive Duty of 6d.

Provided always, that where divers Letters shall be offered in Evidence to prove any Agreement between the Parties who shall have written such Letters, it shall be sufficient if any of such Letters shall be stamped with a Duty of One Shilling, although the same shall in the whole contain any Quantity of Words exceeding 2,160.

BILL OF EXCHANGE, Draft, or Order for the Payment of Money exceeding £4,000, now chargeable with the Stamp Duty of £2 5s:

For every £1,000 or Part of £1,000 of the Money thereby made payable—Duty, 10s.

BILL OF EXCHANGE (Foreign) drawn in a Set of Three or more for the Payment of Money exceeding £4,000, where every Bill of the Set is now chargeable with the Stamp Duty of Fifteen Shillings;

Every Bill of the set, for every £1,000 or Part of £1,000 of the Money thereby made payable—Duty, 3s 4d.

BILL OF EXCHANGE, DRAFT, or ORDER (Foreign) drawn or endorsed out of the United Kingdom for the Payment of Money on Demand—The same Duty as on an Inland Bill of Exchange for the payment of Money otherwise than on Demand, according to the Amount thereby made payable.

All Bills, Drafts, or Orders for the Payment by any Banker or Person acting as a Banker of any Sum of Money, though not made payable to the Bearer or to Order, and whether delivered to the Payee or not; and all Writings or Documents entitling or intended to entitle any Person whatever to the Payment from or by any Banker or Person acting as a Banker of any Sum of Money, whether the Person to whom Payment is to be made shall be named or designated therein or not, or whether the same shall be delivered to him or not, shall respectively be deemed to be Bills, Drafts, or Orders for the Payment of Money chargeable with Stamp Duty, as if the same had been made payable to Bearer or to Order.

Provided always, that any One Document or Writing, although directing the Payment of several Sums of Money to different Persons, shall be chargeable with Stamp Duty as One Order only.

EXEMPTIONS.

Any Draft or Order drawn by any Banker upon any other Banker, not payable to Bearer or to Order, and used solely for the Purpose of settling or clearing any Account between such Bankers.

Any Letter written by a Banker to any other Banker directing the Payment of any Sum of Money, the same not being payable to Bearer or to Order, and such Letter not being sent or delivered to the Person to whom Payment is to be made, or to any Person on his Behalf; and all Warrants or Orders for the Payment of any Annuity granted by the Commissioners for the Reduction of the National Debt, or for the Payment of any Dividend or Interest on any Share in the Government or Parliamentary Stocks or Funds, and all Drafts or Orders drawn by the Accountant-General of the Court of Chancery in England or Ireland, shall be exempt from all Stamp Duty.

COPY.—Certified Copy or Extract of or from any Register of Births, Baptisms, Marriages, Deaths, or Burials—Duty, 1d. The said Duty to be paid by the Person requiring any such Copy or Extract.

EXEMPTIONS.

Copies of Entries of Baptisms, Marriages, and Burials transmitted to the Registrar of the Diocese, in pursuance of the 52 Geo. 3. c. 146.

Certified Copies of Registers sent by Superintending Registrars to the General Registrar, in pursuance of the 6 & 7 W. 4. c. 86

And Copies or Extracts made or given under or in pursuance of the 7 Victoria, c. 15., to amend the Laws relating to Labour in Factories.

COST BOOK MINES.—Any Note, Instrument, or Writing requesting or authorising the Purser or other Officer of any Mining Company conducted on the Cost Book System to enter or register any Transfer of any Share or Shares or Part of a Share in any Mine; or any Notice to such Purser or Officer of any such Transfer—Duty, 6d.

DECLARATION in lieu or in the Nature of an Affidavit, in any Case where, if the same were an Affidavit, it would be chargeable with any Stamp Duty—The same Duty as would be chargeable on such Affidavit.

DELIVERY ORDER.—Any Writing or Document commonly called a Delivery Order, or by whatever Name the same shall be designated, entitling or intended to entitle any Person therein named, or his Assigns, or the Holder thereof, to the Delivery of any Goods, Wares, or Merchandise of the Value of Forty Shillings or upwards, lying in any Dock or Port or in any Warehouse in which Goods are stored or deposited on Rent or Hire, or upon any Wharf, such Writing or Document being signed by or on behalf of the Owner of such Goods, Wares, or Merchandise, upon the Sale or Transfer of the Property therein—Duty, 1d.

DOCK WARRANT.—Any Warrant or Document commonly called a Dock Warrant, or any other Writing or Document, by whatever Name the same shall be designated, which shall evidence the Title of any Person therein named, or his Assigns, or the Holder thereof, to the Property in any Goods, Wares, or Merchandise lying in any Dock or Warehouse or upon any Wharf, such Writing or Document being signed or certified by or on behalf of the Company or Person in whose Custody such Goods, Wares, or Merchandise may be—Duty, 3d.

EXEMPTION.

And Writing or Document given by any Inland Carrier acknowledging the Receipt of Goods conveyed by such Carrier.

LETTER or POWER of ATTORNEY for the Sale, Transfer, or Acceptance of any of the Government or Parliamentary Stocks or Funds not exceeding in Value £20; or for the Receipt of any sum of Money, or any Cheque, Note or Draft for any Sum of Money, not exceeding £20; or Dividends or Interest of any such Stocks or Funds, or any other periodical payments not exceeding the annual Sum of £10—Duty, 5s.

By Order of the Board of Inland Revenue,
THOS. SARGENT, Assistant Secretary.
Inland Revenue, Somerset House, London,
April 5th, 1860.

TO THE CLERGY AND OTHERS.

Notice is hereby given, that by an Act passed on the 3rd instant, 23rd Victoria, Cap. 15, a Stamp Duty of one penny is imposed on every "Certified Copy or Extract of or from any Register of Births, Baptisms, Marriages, Deaths, or Burials," except in the undermentioned instances, in which exemption is granted.

The Duty is to be paid by the person requiring the Copy or Extract, and may be denoted either by a Stamp Impressed on the paper, or by an adhesive Stamp affixed thereto. Where, however, the adhesive stamp is used, the law requires that the person who shall make, sign, or issue the Copy or Extract, shall, before delivering it out of his hands, affix the Stamp, and effectually cancel and obliterate the same, by writing across the Stamp his name and the date of the day and year on which he shall so write the same, so that it cannot, without fraud, be again made use of, under a Penalty of £20.

The requisite Stamps may be obtained either from the Chief office in London, or from the Distributors or Sub-Distributors of Stamps in the country.—By order of the Board of Inland Revenue,

THOMAS SARGENT, Assistant Secretary.
Inland Revenue, Somerset House, London,
April 4, 1860.

EXEMPTIONS ABOVE REFERRED TO.

"Copies of Entries of Baptisms, Marriages, and Burials, transmitted to the Registrar of the Diocese, in pursuance of the 52 Geo. 3, c. 146."

"Certified Copies of Registers sent by Superintending Registrars to the General Registrar, in pursuance of the 6 and 7 W. 4, c. 86."

"And Copies or Extracts made or given under or in pursuance of the 7 Victoria c. 15, to amend the laws relating to Labour in Factories."

S. W. SILVER AND CO.,

Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteans, &c., portable and suited to all climates.

Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

TRADE B/P MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—

The LANCET states, "This is superior to anything of the kind known."—It is respectfully announced that to any application by letter, Brown and Polson forward the address (for any village or town in the Three Kingdoms) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as Brown and Polson's," if the name, address, and designation are kindly communicated, such confidence will be greatly appreciated.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, and 23 Ironmonger lane, London.

ROYAL ST JAMES'S THEATRE.—

King street, St James's.
Sole Lessee, Mr F. B. Chatterton.—Directress, Miss Wyndham.

On Easter Monday, and during the week, A BORDER MARRIAGE. After which, an entirely new comedietta by Howard Paul, Esq., entitled A CHANGE OF SYSTEMS. To be followed by an entirely new and gorgeous burlesque, by Leicester Buckingham, entitled LUCREZIA BORGIA AT HOME AND ALL ABROAD. Supported by Mesdames Wyndham, Emily Scott, Cecilia Ranoe, Maskill, Miss Clara Morgan (of the Royal English Opera), a numerous Corp de Ballet, and Mr Charles Young. To conclude with NUMBER FORTY-NINE.

Reduced Prices:—Pit, 1s; Gallery, 6d. Box-office open from 11 to 5 daily. Commence at 7.

NEW THEATRE ROYAL ADELPHI.

Sole Proprietor and Manager, Mr W. Smith.
Powerful Attraction for the Holidays.
Adelphi Drama and Grand Extravaganza.

On Easter Monday, April 9th, and during the week, the Original Drama of THE DEAD HEART. Mr B. Webster, J. L. Toole, D. Fisher, P. Bedford, Billington, Stuart, C. J. Smith, Powell, Romer; Miss Woolgar, K. Kelly, and Laidlaw. And the Grand Musical Fairy Extravaganza of THE FAIR ONE WITH THE GOLDEN LOCKS. Messrs J. L. Toole, P. Bedford, Eburne, Powell, Romer; Miss Woolgar, Miss Emily Thorne (her first appearance), Miss K. Kelly, Miss Laidlaw.

Doors open at ½-past 6, commence at 7.—Box-office open from 10 till 5. No change for booking.
Acting Manager, Mr W. Smith.

ASTLEY'S ROYAL AMPHITHEATRE.

Proprietor, Mr Wm. Batty.

In announcing the RE-OPENING on EASTER MONDAY, April 9th, of this far-famed Amphitheatre, again under his own management, Mr Batty feels proud in calling to mind the widely-extended and flattering patronage, including even that of Her Most Gracious Majesty the Queen; and which patronage, during his former period of catering for the public amusement, was at all times so lavishly bestowed. During the recess, the interior of the Amphitheatre has been entirely redecorated and embellished, and surrounded with costly and unique lustres, and a new gigantic and most beautiful centre crystal chandelier, manufactured by Defries and Son, of Houndsditch. The whole energy of the proprietor has been directed to gathering together, in one body, celebrities both dramatic and equestrian, who have each achieved success. He has not hesitated to expend immense labour and capital in its accomplishment, and looks, with hope, for the fullest patronage of the public.

*** In active preparation, a New Grand Military Spectacle, founded upon the French drama, "L'Histoire d'un Drapeau," (now performing, with great success, in Paris), and entitled THE HISTORY OF A FLAG.

SAUCES.—CONNOISEURS

have Pronounced LEA and PERRINS' "WORCESTERSHIRE SAUCE" one of the best additions to Soup, Fish, Joints, and Game. The large and increasing demand has caused unprincipled traders to manufacture a spurious article; but the "GENUINE" all bear Lea and Perrins' name on Bottle, Label, and Stopper.

Sold by Crosse and Blackwell, London, and all respectable Oilmen and Grocers. Sole manufacturers—Lea and Perrins, Worcester.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality. £ s d	Medium Quality. £ s d	Best Quality. £ s d
Two dozen full-size Table Knives, ivory handles	2 4 0	3 6 0	4 12 0
One-and-a-half dozen full-size Cheese do.	1 4 0	1 14 0	2 11 0
One pair regular Meat Carvers	0 7 6	0 11 0	0 15 6
One pair extra size do.	0 8 6	0 12 0	0 16 6
One pair Poultry Carvers	0 7 6	0 11 0	0 15 6
One Steel for sharpening	0 3 0	0 4 0	0 6 0
Complete Service	4 14 6	6 18 6	9 16 6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND ELECTRO-SILVER PLATE

always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III, c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,
MAPPIN BROTHERS,
Queen's Cutlery Works, Sheffield; and
67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

SECURITIES FOR POLITICAL EQUILIBRIUM.

No apology ought to be needed for referring again to the Reform Bill. A dissolution of Parliament or a change of Government would agitate the whole country with the liveliest interest; yet a new constitution for England is a far sterner reality. It will affect the character and fortunes of every Englishman to the remotest ages. On what subject is the keenest vigilance and the most careful consideration more imperiously required?

Mr Massey's very able speech has done much to awaken the attention of the House of Commons to the extreme importance of what they are doing. The greatness of the problem is beginning to overcome weariness and apathy. At such a moment, when men are perceiving that the fortunes of Britain are at stake, and are inquiring what are the considerations to be taken into account, it may be very useful to keep the main elements of this vital question steadily before their view.

In the first place, there is no discontent against the spirit and tendencies of the present House of Commons; no complaint that it does not sincerely desire to promote the welfare of every class, and above all of the working classes; no charge of the predominance of particular interests; no accusation of a want of sympathy with any portion of society. But for the personal complications of leading politicians, the question of Reform need not now to have been raised. It has, however, been raised; and it ought to be met fully and deliberately, for it affects real elements in the structure of English society, and involves a settlement of social relations which cannot be avoided. These elements are two. Property and intelligence are daily being developed in the unrepresented classes, who justly feel themselves thereby entitled to share that political power which their neighbours enjoy; and the vast numbers of the working classes seek some direct representation in Parliament, which to a slight extent they possessed under the old franchises before 1832, of which the Reform Bill wholly deprived them, and which it would materially strengthen the safety of the State to grant them now.

Of these two paramount objects, the Government Bill makes no certain provision for the latter. It confers no direct representation on the working classes. It does not certainly enable them to elect a single member of their own choice. It leaves this part of the problem totally unsolved; and perpetuates the necessity of a new Reform Bill. It does, however, make an extension of the franchise; but in such a manner—we cannot say on such a principle, for principle it has none—as to entail the most ruinous consequences for the future. It adopts a perfectly arbitrary rule, a uniform occupying franchise of 6*l*, founded on no definite ground of natural or social limit. This want of a real boundary renders a universal household suffrage a question merely of time, probably of a very short time; and the inevitable result will be the government of the nation by the lowest class of householders. Nominally, a 6*l* franchise is proposed; in reality, a universal household franchise is established. It would have been more statesmanlike, and far safer, to have at once taken up the proposition of a universal household franchise; for then the true character of the enactment would have been directly understood by every man, and the necessity of providing against its peculiar dangers would have been recognised.

A most pernicious error has generally prevailed throughout the discussion of this subject. It is argued as a question of the personal capacity of each elector to exercise the franchise. It is confidently asked, whether a steady artisan is not as competent to choose a member of Parliament as a small shopkeeper; and it is triumphantly assumed that the argument is at an end. But so far is the conclusion that a particular man is fit to vote from settling the question, that it is pr e cisely at this point where the enormous difficulty and danger begin. Everything turns on the numbers of each class of electors, and this must not be lost sight of for an instant. It may be granted that every man holding a house below 10*l* is qualified to vote; but it would be a most disastrous conclusion that they ought all at once to have votes. Their superiority in numbers would immediately extinguish the votes of the upper classes. In the metropolitan boroughs the rich and the educated have ceased to vote: a universal household franchise will produce the same effect in every constituency in the kingdom. This is not the enfranchisement of all, but the disfranchisement of some to the entire benefit of others. It is the supremacy of classes, and those the poorest and least educated classes.

The question is entirely that of the equilibrium of political power. This is the point on which the attention of Parliament must be concentrated. There is virtue and intelligence enough in every portion of our fellow-countrymen to entitle them to a share of the electoral franchise: there is not in human nature freedom from class-feelings and class-interests enough to warrant the bestowing on any class, on any ground, least of all that of mere numbers, absolute mastery over the country. To take the numbers of the enfranchised classes into account, and by some political machinery so to balance excess of numbers as to effect equal representation, is the true subject-matter for the most careful deliberation of Parliament.

There are three arrangements by which political equilibrium may be secured, both the first and last of which we have ourselves continually pressed on the consideration of Parliament.

1. Plurality of votes on Sturges Bourne's principle. Having already discussed it, we need here only say that

it would enable the largest possible extension of the franchise to be safely combined with the reasonable preponderance of property and intelligence.

2. Division of boroughs into wards on the principle of one member for equal amounts of property. Supposing the property rated to the poor in the borough were 100,000*l* a year, one member might be allotted to the richer and fewer citizens who owned 50,000*l* collectively, and another to the poorer and more numerous classes who also possessed in the aggregate property of equal value. This plan would also admit with safety of a very large increase of the franchise; and would also tend to secure the representation of the opinion of minorities.

3. Restriction of each elector to voting for one member only. We have recently strongly urged the consideration of this measure. We know of know reason, but long usage, to justify the right of voting for more than one member. Increase of population may authorise a demand for more members; but we are unable to discover how a man, who has a vote for one member, becomes entitled to vote for two, because other people come to live near him. This system would lead directly to the representation of classes and interests, and not of numbers only. It would, whilst respecting its rights, control the numbers of the democracy.

If regard for a privilege long enjoyed should be thought to render its abolition difficult, a cumulative vote, each man voting for one candidate only, but giving him as many votes as there are members for the borough, would effect, though not so efficiently, the same result. But division into wards, each returning one member, is a far sounder arrangement than unwieldy constituencies with three or four seats. Mr Massey has justly pointed out the want of acquaintance between such enormous bodies and their representatives as a very great evil. Such elections indirectly fall into the hands of local and often not very respectable organisations.

These arrangements may all be variously modified and combined. There are others still, such as representation on the principle of the payment of direct taxes, and double election—that is, election of a small body of electors who shall choose the members,—as formerly existed in France; but they are too remote from former practice to have any chance of being adopted. Those we have enumerated furnish ample materials for a satisfactory solution of the problem. We only wish that the House of Commons, instead of invidiously discussing the characters of our fellow-countrymen, would address itself to the practical and urgent task of devising the securities required for rendering a large extension of the suffrage safe and desirable.

THE INCOME TAX IN ENGLAND AND IN INDIA.

The importance of the income tax has recently become much increased. We have been used to consider it as an occasional tax for peculiar circumstances, an exceptional expedient for exceptional difficulties;—we have now to regard it as a principal part of our permanent taxation. We used to regard the income tax as something peculiarly European, as something peculiarly English;—we are now about to extend its operation to India, where the ordinary framework of European society does not exist, and where the native character is altogether different from our own. Under these circumstances, therefore, it is most important carefully to review the proper functions of a tax on which we are going to place so much dependence.

We may say, almost without fear of contradiction, that an income tax has three uses. First. Its constant and habitual use as a permanent element in the taxation of a country constituted as England at present is. We have not long, indeed, been accustomed to *speak* of the income tax as a permanent tax; financiers have a natural delicacy in using language so unpleasing, but, nevertheless, for some years all thoughtful men of business have been aware that the income tax was never likely to be relinquished; and when the subject is narrowly investigated, it will be found very difficult to make the rich pay their due share of the public imposts without an income tax or something equivalent to it. In India, Mr Wilson found that such was evidently the case. Indirect taxation breaks down in an Asiatic community at the very first stage. The wants of Asiatics are very simple, and if a tax is imposed on any commodity not absolutely necessary to their existence, they w refuse to consume it. In England we do not feel this dif culty, but we feel another. If we tax any luxuries of tl rich that are imported from abroad, we restrict the indust of the poor. All such luxuries are paid for directly or i directly by the produce of our own labour; if we restri our import trade, we restrict to a precisely equivalent e tent our export trade, and thereby we inevitably diminis the demand for the labour of the poor and lessen their ear ings. We are determined, for this reason as well as other to have a simple tariff; and in a simple tariff there is n place for old-fashioned duties on numerous and multifariou luxuries. We cannot reach the wealthy by Customs duties —we are obliged to tax them directly.

It used to be said that the income tax was so unpopula that it would never be permanently endured. It was said people have to pay their taxes in a "lump-sum," they wi refuse to pay them. But experience has not confirmed thi anticipation. We have had for very many years an incom tax—an income tax levied in a way which presses undul on the most active, energetic *speaking* classes in th nation, and yet we have endured it all that time. I fact, even under the income tax a very large numbe of people do not pay their contributions in a "lum sum;" their income tax is deducted from their receipt and not paid out of their pockets. Take the case a monied man living on the income of railway shares, o other similar securities: he never has to give a cheque fo his income tax; it is deducted beforehand from everythin which he receives. The landowner is somewhat similarl situated. His tenants pay his income tax for him. Firm in business, too, pay their income tax as a whole, and i looks like a business expense. In fact, the payment c direct taxation is a more insensible process than would a first sight appear, and this has, we think, tended to mitigat its unpopularity.

Secondly. The income tax has a most important *occasiona* use. It is the tax which it is most easy to vary. In direct taxes ought to be kept as steady as possible. An change in them almost certainly affects the trade of th country, and no financier can pretend to assign limits to it injurious operation. But, as direct taxation is a compara tively simple thing, its effects are much less ramified. I the taxation of such a country as England a variable elemen is essential, Our international relations are too manifold and our social circumstances are too complex, to permit ou taxation to remain always the same.

Thirdly. The income tax has what we may call its *extrem* operation. This was the use of it which Mr Gladstone brough so prominently before us in 1853. He called the income tax "our financial reserve," and showed how it had been usec to defray the costs of the war with Napoleon. It is not un wise to recur to his exposition.

"I do not know whether this committee are aware how "much the country owes to the former income tax; but "because I deem it to be of vital importance that you should "fully appreciate the power of this colossal engine of finance, "I will venture to place before you, in what I think an in- "telligible and striking form, the results which it once "achieved. I will draw the comparison between the mode "in which your burdens were met, during that period of the "war when you had no income tax, during that period of "the war when you had the income tax in a state of half effi- "ciency—and during that last and most arduous period of "the war, when the income tax was in its full power.

"From 1793 to 1798, a period of six years, there was "no income tax; from 1799 to 1802, there was an income "tax; but the provisions of the law made it far less effective, "in proportion to its rate, than it now is; and from 1806 to "1815, a period of eleven years, you had the income tax in "its full force. Now, every one of us is aware of the "enormous weight and enormous mischief that have been "entailed upon this country by the accumulation of our "debt; but it is not too much to say, that it is demonstrated "by the figures, that our debt need not at this moment have "existed, if there had been the resolution to submit to the "income tax at an earlier period. This test, I think you "will admit, is a fair one; I put together the whole charge "of government and war, together with the charge of so "much of the national debt as had accrued before 1793, so

"as to make (if I may so express myself) a fair start from "1793. The charge of government and war, together "with the charge of debt incurred before 1793, amounted, "on the average of the six years, down to 1798, to "36,030,000*l* a year: the revenue of that period, with all "the additional taxes that were laid on, amounted to "20,626,000*l* a year; there was, therefore, an annual excess "of charge above revenue—charge for government, for war, "and for debt contracted before 1793, but not including the "charge of debt contracted since 1793—of no less than "15,404,000*l*. In 1798 you just initiate the income tax, "and immediately a change begins. In the four years, from "1799 to 1802, the charge for the same items that I have "mentioned, which had been 36,000,000*l*, rose to 47,413,000*l* "a year; but the revenue rose to 33,724,000*l* a year, and "the excess for those four years was diminished by "about 2,000,000*l* a year; instead of an annual excess "of 15,400,000*l* over revenue, it was 13,689,000*l*. "Now, look to the operation of the tax, both direct "and collateral, from 1806 to 1815, during the time when "your exertions were greatest, and your charges were "heaviest. The average annual expenses of war and govern- "ment, from 1806 to 1815, together with the charge upon "the debt contracted before 1793, were 65,794,000*l*; but you "had your income tax in its full force, with your whole "financial system invigorated by its effects, and the revenue "of the country now amounted to 63,790,000*l*; while the "deficiency in actual hard money, which during the war "represented something like double the amount in debt, "owing to the rate at which you borrowed, instead of being "15,404,000*l* a year, or (as it was in the second period) "13,689,000*l* a year, was only 2,004,000*l* a year, from 1806 "to 1815.

"Such was the power of the income tax. I have said "there was a deficiency annually of 2,004,000*l*, but it is fair "for you to recollect, and it is necessary, in order to present "to you the fact I want to place in clear view, that out of the "65,794,000*l* of charge that I have mentioned, about "9,500,000*l* were due for charge of debt contracted before "1793; so that, if you compare the actual expense "of government, including the whole expense of war from "1806 to 1815, with your revenue when you had the "income tax, it stands thus before you—that you actually "raised 7,000.000*l* a year during that period, more than the "charge of government, and the charge of war. That, I "must say, is to me a most remarkable fact. It affords to "me the proof, that if you do not destroy the efficacy of this "engine—I do not raise now the question whether it is to be "temporary or permanent, which I hold to be quite a dif- "ferent question, and I will go into that by and by—it "affords you the means, should unhappily hostilities again "break out, of at once raising your army to 300,000 men, "and your fleet to 100,000, with all your establishments in "proportion. And, much as may be said of the importance "—in which I concur—of an army reserve and a navy "reserve, and of having your armouries and your arsenals "well stored, I say this fiscal reserve is no less important; "for, if it be used aright, it is an engine to which you may "resort, and with which, judiciously employed, if unhappily "necessity arise—which may God in his mercy avert—with "it judiciously employed you may again, if need be, defy "the world."

Exactly similar is the use which Mr Wilson is endeavouring to make of the income tax in India. He finds the Indian Exchequer in the last difficulty, and he therefore uses its extreme resource.

Now, which of these three uses are we at present making of the income tax? We think it must be said that we are trenching on its extreme use. If such a struggle as that of our fathers were to come upon us, we should not have the same means of maintaining it that they had. It will be said, and truly said, that our circumstances are very peculiar. We have to bear this year the cost of possible enmity with France, and the cost of actual friendship with her. We have largely increased our armaments, and we have reduced the duties on French productions which Mr Cobden contracted that we should reduce. We are far from objecting to either course. We wish to see England safe, cheaply safe, if it were possible; dearly safe as it is not possible. We are ready to bear the cost of the Treaty with France. We have not been so sanguine as some of our contemporaries in estimating its immediate effects, but we do not doubt that its ultimate consequences will be considerable. And even if they were not considerable, we believe that we should have obtained an important benefit. We have shown the strongest possible desire to be at peace with France. We have shown that we would lose certain revenue to obtain possible trade and amity with her. And the time may come, though we hope it will not, when this may be all important to us. Suppose that the French Emperor should seek a quarrel with us, we should now be united. There would scarcely be a dissentient man in the nation; we should have, as a people, but one voice and one mind. On the other hand, if we had rejected the overtures of Louis Napoleon,—if we had refused to make this Treaty with him, there would have been inevitably and certainly a numerous and dissatisfied party in the country. Mr Bright—or a far more truly pacific man, Mr Gladstone—would have said: 'You caused the rupture with 'France; you offended her; you refused to cement your alli- 'ance with her by commerce, which you acknowledge to be 'the strongest bond of amity. On your head, therefore, and 'not on that of the French Emperor, be the greater blame. 'You caused the ill-feeling: the rest was but the consequence 'of it.' Those who remember how much the oratory of certain statesmen weakened our strength and our spirit in the Russian war, would tremble on a more critical occasion to hear a repetition of it, would not be sorry to have purchased national unanimity at a cost greater even than the cost of the French Treaty.

Although, therefore, we think that the present use of the income tax is to a certain extent an extreme use,—although we know that in any great contest that may arise we should not have the full advantage from the income tax that our fathers had; yet still we are prepared to approve of it, though not without anxiety and not without misgiving.

THE NEW STAMP ACT.

The New Stamp Act, the most material parts of the Schedule to which we extract below, contains some very important provisions.

1. It abolishes altogether the distinction between cheques upon bankers requiring a stamp, and cheques not requiring it. *All cheques* must in future be stamped. There will be no way of depositing money in a bank and getting it out again without paying a penny to the Government. No matter in what form the instrument be drawn, if it is a direction to a banker from a customer to pay money on behalf of that customer, it must be stamped.

We apprehend that most persons will think this simplification of the law to be a desirable one. There may be considerable doubt as to the expediency of taxing payments by way of cheque at all; but if any are to be taxed, all should be. The same reasons are applicable in all cases, and the same objections. The only exception which the law will now contain relates to transactions between bankers themselves. These are still exempted from duty because of their number. If a duty were imposed on them, it would be equivalent to imposing an exclusive tax on a particular trade, which is contrary to admitted principle. This exemption will also be approved of by those who carefully consider it.

2. The new Act requires that all adhesive stamps on cheques, foreign bills, delivery orders, dock warrants, &c., shall be cancelled by the person executing such document before he issues it or in any way makes use of it. He must put his initials and *the date* on it before it leaves his hands. The words of the Act are:—

IX. The person who shall make, sign, or issue any instrument, document, or writing in the Schedule to this Act mentioned, and chargeable with any of the duties of one penny and threepence, shall, before he shall deliver the same out of his hands, custody, or power, affix to it the proper adhesive stamp denoting the duty chargeable thereon or in respect of it, and shall effectually cancel and obliterate the stamp, by writing upon it his name, or the name of his firm or principal, or the initials thereof respectively, and the date of the day and year on which he shall so write the same, and so and in such manner as clearly and distinctly to indicate that the said stamp has already been used, and so that it cannot, without fraud, be again made use of.

The penalty for omitting to do this is 20*l*.

3. *All bankers are required to mark all cheques bearing adhesive stamps with the word "paid" when they pay them.* We wish to direct particular attention to this, as the marginal note to the clause gives an impression that the provision is applicable to foreign bills only. The words are, however, general. They are as follows:—

XII. Whenever any bill of exchange, draft, or order having thereon an adhesive stamp shall be presented for payment, the person to whom the same shall be presented shall, upon paying the same, write or impress or cause to be written or impressed upon every stamp affixed to the bill the word "paid," to the end that the stamp may be more effectually cancelled, and made incapable of being used again; and in default of so doing he shall forfeit the penalty of twenty pounds.

The London bankers have already begun to act on this clause, though many country bankers are not aware of its existence.

4. The Act makes an important alteration in stamps for bills of exchange of large amount,—viz., those exceeding 4,000*l*. There was formerly a maximum of 2*l* 5s; there is now to be a progressive duty of 10s per 1,000*l*, without limit.

5. The Act imposes stamp duties on delivery orders, dock warrants, and *powers of attorney for the sale of stock*, for which we refer to the portion of the Schedule cited below:—

	£	s	d
AGREEMENT, or any Minute or Memorandum of an Agreement, made in England or Ireland, under Hand only, or made in Scotland without any Clause of Registration, and not otherwise charged nor expressly exempted from all Stamp Duty, where the matter thereof shall be of the Value of Five Pounds or upwards, whether the same shall be only Evidence of a Contract, or obligatory upon the Parties from its being a written Instrument; together with every Schedule, Receipt, or other Matter put or endorsed thereon or annexed thereto	0	0	6
And where the same shall contain 2,160 Words or upwards, then for every entire Quantity of 1,080 Words contained therein over and above the first 1,080 Words a further progressive Duty of.....	0	0	6
Provided always, that where divers Letters shall be offered in Evidence to prove any Agreement between the parties who shall have written such Letters, it shall be sufficient if any of such Letters shall be stamped with a Duty of One Shilling, although the same shall in the whole contain any Quantity of Words exceeding 2,160.			
BILL OF EXCHANGE, Draft, or Order for the Payment of Money exceeding 4,000*l*, now chargeable with Stamp Duty of 2*l* 5s;			
For every 1,000*l* or Part of 1,000*l* of the Money thereby made payable.....	0	10	0
BILL OF EXCHANGE (Foreign) drawn in a Set of Three or more for the Payment of Money exceeding 4,000*l*, where every Bill of the Set is now chargeable with the Stamp Duty of Fifteen Shillings;			
Every Bill of the set, for every 1,000*l* or Part of 1,000*l* of the Money thereby made payable	0	3	4
BILL OF EXCHANGE, DRAFT, or ORDER (Foreign) drawn or endorsed out of the United Kingdom for the Payment of Money on Demand	The same Duty as on an Inland Bill of Exchange for the payment of Money otherwise than on Demand, according to the Amount thereby made payable.		
All Bills, Drafts, or Orders for the Payment by any Banker or Person acting as a Banker of any Sum of Money, though not made payable to the Bearer or to Order, and whether delivered to the Payee or not; and all Writings or Documents entitling or intended to entitle any Person whatever to the Payment from or by any Banker or Person acting as a Banker of any Sum of Money, whether the Person to whom Payment is to be made shall be named or designated therein or not, or whether the same shall be delivered to him or not, shall respectively be deemed to be Bills, Drafts, or Orders for the Payment of Money chargeable with Stamp Duty, as if the same had been made payable to Bearer or to Order.			
Provided always, that any One Document or Writing, although directing the Payment of several Sums of Money to different Persons, shall be chargeable with Stamp Duty as One Order only.			
EXEMPTIONS.			
Any Draft or Order drawn by any Banker upon any other Banker, not payable to Bearer or to Order, and used solely for the Purpose of settling or clearing any Account between such Bankers.			
Any Letter written by a Banker to any other Banker directing the Payment of any Sum of Money, the same not being payable to Bearer or to Order, and such Letter not being sent or delivered to the Person to whom Payment is to be made, or to any Person on his Behalf; and all Warrants or Orders for the Payment of any Annuity granted by the Commissioners for the Reduction of the National Debt, or for the Payment of any Dividend or Interest on any Share in the Government or Parliamentary Stocks or Funds, and all Drafts or Orders drawn by the Accountant-General of the Court of Chancery in England or Ireland, shall be exempt from all Stamp Duty.			
DELIVERY ORDER.—Any Writing or Document commonly called a Delivery Order, or by whatever Name the same shall be designated, entitling or intended to entitle any Person therein named, or his Assigns, or the Holder thereof, to the Delivery of any Goods, Wares, or Merchandise of the Value of Forty Shillings or upwards, lying in any Dock or Port or in any Warehouse in which Goods are stored or deposited on Rent or Hire, or upon any Wharf, such Writing or Document being signed by or on behalf of the Owner of such Goods, Wares, or Merchandise, upon the Sale or Transfer of the Property therein.....	0	0	1
DOCK WARRANT.—Any Warrant or Document commonly called a Dock Warrant, or any other Writing or Document, by whatever name the same shall be designated, which shall evidence the Title of any Person therein named, or his Assigns, or the Holder thereof, to the Property in any Goods, Wares, or Merchandise lying in any Dock or Warehouse or upon any Wharf, such Writing or Document being signed or certified by or on behalf of the Company or Person in whose custody such Goods, Wares, or Merchandise may be	0	0	3
EXEMPTION.			
Any Writing or Document given by any Inland Carrier acknowledging the Receipt of Goods conveyed by such Carrier.			
LETTER or POWER of ATTORNEY for the Sale, Transfer, or Acceptance of any of the Government or Parliamentary Stocks or Funds not exceeding in Value 20*l*; or for the Receipt of any Sum of Money, or any Cheque, Note, or Draft for any Sum of Money, not exceeding 20*l*; or Dividends or Interest of any such Stocks or Funds, or any other periodical Payments not exceeding the annual Sum of 10*l*	0	5	0

STRIKES, AND THE POLICY OF EMPLOYERS.

We have before informed our readers that a Committee of the Social Science Association has been for some months vigorously at work on what we believe to be the most important subject connected with the field of inquiry marked out by that Association,—the practical causes and effects of Strikes. We know that Committee to be impartially organised,—that it contains men identified alike with the interests of employers and the interests of the labourers,—and we believe it to be honestly and unaffectedly anxious to bring to light the whole truth without any kind of reserve on the subject, as the necessary preliminary of any effectual remedy for one of the greatest evils which affect the structure of English society.

The Committee thus formed has met with much cordial assistance where it least expected it, and with some very unexpected discouragement,—again where it was least to be expected. We may say at once that one of the very greatest difficulties with which it has to contend is the politic reserve of employers in dealing with the history and facts of Strikes. We confess that we ourselves, probably like the public in general, had been deeply impressed with the conviction that the difficulty would arise elsewhere; that the Committee would find themselves thwarted by the obstinate

secrecy of the Trades Unions as to their rules and practices; that they would be assisted with the most cordial help of the employers. We had been in the habit of assuming that the more far-sighted and the more educated party, who see more clearly, if they do not feel so acutely, the ruin caused by Strikes, would have been eager for publicity, while those alone who were conscious of using intimidation as their social instrument would be anxious to cover up their doings, and to foil the Committee in their attempt to lay them bare.

This was our expectation, but our expectation has not been verified by the fact. Many of the Trades Unions have come forward with the utmost frankness, and explained their operations to the Committee,—laid open their rules, however objectionable and unwise,—often truly denying, not unfrequently as truly admitting, that their printed rules do not cover the whole ground, that they have other secret and more stringent rules in emergencies, the adoption of which they either condemn or defend as the case may be, but still candidly admit,—and they have usually afforded full information as to the actual facts of any Strike with regard to which the Committee are anxious to be acquainted. But while the Committee have found their inquiry much easier and smoother than they expected with regard to the men,—they have certainly found it much more embarrassed and difficult than they expected with regard to the employers. Here,—with many honourable and praiseworthy exceptions,—secret diplomacy has been perhaps the rule. Employers have looked coldly on the inquiry, deprecated the needless revival of disputed subjects, declined to assist with the statistics of former struggles, and the fruits of their own experience,—and, in short, disappointed the Committee just where they ought least to have looked for any disappointment.

A notable instance of this policy now lies before us, and we call attention to it because we are deeply persuaded that this policy on the part of the employers of labour is a grave and capital error, which they themselves will one day see. Mr Thomas Hughes, of Lincoln's Inn, whose appointment on the Committee secured for it much of the confidence and respect with which the working classes and their leaders in the various Trades Unions have treated it, was requested by the Committee to prepare an account of the Great Engineers' Lock-Out in 1851-2, with the history of which, as regards the operatives' share in it, he had been personally and intimately acquainted. It was intended by the Committee that this statement, necessarily *ex parte* to some extent, should be checked and verified by the representatives of the Master Engineers, and for that purpose they requested him to apply to those who had been most prominent in the struggle on the employers' side. The result is thus described:—

I wrote twice to Messrs Hibbert and Platt asking for information. They forwarded my application to Mr Whitworth, the Secretary of the Employers' Association, from whom I received the following letter:—

"13, Corporation street, Manchester, 13th Jan., 1860.

"Sir,—Your letter to Messrs Hibbert and Platt has been handed to me by Mr John Platt, the surviving partner.

"As Secretary to the Association of Employers of Operative Engineers, I shall be glad to furnish you with any information which I am able, but I am at a loss to say what information I could send you beyond the published papers which you have already seen.

"I don't think it would be agreeable to the masters generally, that any authorised statement of their course of action should be made.

"I think the general feeling would be that, the matter having been well settled, and no remnant of disturbance having since made its appearance, it would not be wise, nor in the interest of the public good, that the masters should even inferentially do anything to revive in the remotest degree, the feelings which that contest engendered. If, however, I can give you any specific information which will be of use to you, I shall be glad.—Yours most obediently, "Henry Whitworth.

"Thos. Hughes, Esq., 3, Old square, Lincoln's inn, W.C."

In answer to which, I forwarded a copy of the present report, asking him for any remarks or evidence as to the facts stated therein. He returned it with the following letter:—

"13, Corporation street, Manchester, 24th Jan., 1860.

"Sir,—I have read your paper through, and am obliged by the opportunity you have afforded me.

"I still think it best that neither the masters nor their then secretary should interfere in reference to the statements made. And whilst complimenting you, as I must, upon the brevity with which you have covered the ground, I think I shall best consult their wishes by refraining from any further remark.

"Thanking you for your courtesy,—I am, yours, most obediently, "Henry Whitworth.

"Thos. Hughes, Esq., 3, Old square, Lincoln's inn, London."

"I don't think that it would be agreeable to the masters "generally that any authorised statement of their course of "action should be made. I think the general feeling would "be that the matter being well settled, and no remnant of "disturbance having since made its appearance, it would not "be wise, nor in the interest of the public good that the "masters should even inferentially do anything to revive in "the remotest degree the feeling which that contest engen-"dered." Such is, apparently, the prevalent doctrine among employers,—one surely not worthy of them. Indeed, we cannot believe that this policy accords with the convictions of the more enlightened and thoughtful among them. When a question that is not a question of principle, but of personal misunderstanding, is once closed, no doubt it is in the highest degree inexpedient to rake it up. But the questions at issue between the employers of labour, and the combinations of labour, are questions of principle,—questions as widely canvassed, as eagerly debated, as passionately contested as ever. These questions have never been settled. No concord has ever been attained between the masters and the men with regard to them. Let a convenient season arise in the engineers' or any great trade, as it recently arose in the building trade, and strife as vehement as ever would assuredly break out. There is no peace, as yet,—there is only truce between capital and labour in this great country. All true men must wish this uncertain and inconstant calm to be exchanged for a durable and well-founded peace. What better method can be adopted than to forward in any way the inquiries of such a Committee as that to which we have drawn attention? It belongs to neither party. It contains representatives of both parties, and many who belong to neither, and simply desire to attain the truth. It sincerely desires to bring to light the secret of the chronic strife between those whose interests, moral and material, are really identical. And when the inquiries of such a body are stopped with the traditional answer, "Least said soonest "mended," one inference, and but one, will be drawn by the public at large. They will say with some justice, that there is most real uneasiness where there is most secrecy. It is because we sincerely believe that Trades Unions may be really taught to accept wider and juster views of the relations between capital and labour by a frank policy, that we urge this policy so warmly. Now is the time to prove that English capitalists sincerely consult the interests of their *employés*, and are anxious for a cordial understanding with them. If the Unionists are met with rebuffs at a time when they are eager to come to frank explanations on the neutral ground of the Social Science Association, an opportunity is lost which may never recur. Mr Hughes' able pamphlet* on the Engineers' Strike of 1851-2 deserves the most careful perusal of every master engineer. And any rectification of the facts there stated, or any new facts bearing either on that, or any other controversy between employers and employed, will, we have reason to know, be received by the Committee on Strikes with sincere gratitude.

THE CORRESPONDENCE WITH JAPAN AND ITS LESSONS.

The correspondence just published with Japan is a very instructive comment on the rather obvious truth, that we cannot force a foreign Government to encourage trade with us by merely extorting a contract to that effect. Japan was awed into a treaty, by a *coup de main*. Lord Elgin's expedition and his success in China frightened the Japanese Government into a policy contrary to all the traditions of 200 years. But the sudden pressure which carried the treaty, and was then withdrawn, was even more needful in order to carry it out. There is no sphere in which a Government can interfere with more certain effect to obstruct even the strong wishes of the population under its control, than that of its foreign commerce. Indeed the masses of the Japanese people have apparently no strong feeling on the subject. They would like to trade with us if there were every facility for it; but they have no idea of incurring any risk in the matter. Any obstruction is enough

* It is published by Macmillan, Henrietta street, Covent garden.

to deter them. They have little notion of the magnitude of the ultimate advantages,—they have a strong dislike to the inconveniences of negotiation with a foreign people,—and they are docile instruments of their feudal superiors. The consequence is, that the oligarchy of nobles, who practically govern Japan, have, and are certain to have in the long run, everything their own way. A powerful expedition will, no doubt, bear down all resistance, and start the commercial treaty in fair working order, so long as the expedition remains within reach of Japan, and no longer. It is simply absurd to hope that in so complicated a matter as the arrangement of a commercial system with a foreign country, a Government eager to interpose obstructions will fail to find the means of doing so, so soon as external pressure is removed. We have in this correspondence the history of a perpetual struggle between the energy and zeal of the English Minister at Japan, and the obstinate indifference of the Government to the objects of the treaty under which he was appointed; and it is obvious how unequal the conflict is. The complaints of the Minister of the violation of treaty-obligations are met with expressions of wonder and doubt, and promises of inquiry,—but nothing is done. The grievances remain the same as ever, and in the last letter of this correspondence are represented as more operative than in the first. Even war is threatened,—injudiciously, though not unnaturally threatened, we think—without producing any marked effect. Politeness of manner, incredulity as to facts, reluctance to attend to the subject of the commercial treaty at all, characterise the Japanese Ministry of Foreign Affairs throughout.

The risk of the policy we are pursuing in Japan is vividly brought before us in these papers. We have, indeed, in them one of the most instructive pictures of the natural and yet artificially-created origin of a quarrel between two nations,—both of them certain to be equally impressed with a genuine sense of injury,—that we ever remember to have seen. In this correspondence, no doubt, our representatives appear to have all the right, and the Japanese Government all the wrong. Nothing can be fairer than the complaints of Mr Rutherford Alcock and his subordinates,—nothing more moderately and equitably urged. Once assume the treaty as a fair and voluntary bargain, made with equal readiness and goodwill by both parties to it,—and the positions assumed by our representative and his assistants are quite impregnable. Suppose for a moment that the Japanese had really invited the treaty, instead of having acquiesced in it in a moment of panic,—that their Government had said to our Government, 'We have lead, coal, 'and sulphur in abundance, besides skins and provisions, and 'are anxious to dispose of them for your manufactures and 'other products,'—suppose this, and no terms could be too strong for the bad faith exhibited in acting upon a contract thus freely made. Nor do we for a moment blame Mr Alcock and his colleagues for assuming,—what in their position they were bound to assume,—that the treaty really re-represented the *bonâ fide* wishes of both Governments, with equal accuracy. But we wish to point out how naturally, by means of this treaty, the way is paved for a quarrel in which each party must honestly and genuinely think itself aggrieved. Mr Alcock is sent to Japan on the basis of the commercial treaty: this is his point of departure; once let him recognise any invalidity or flaw in this, and he cuts the ground from under his feet. When he arrives, no one is better aware than himself how little the treaty is in conformity with the wishes of the Japanese Government. Before he has been there many months, no one can know better than he how indifferent the masses of the Japanese people are to it one way or the other. Yet by dint of constantly regarding the treaty as the true standard of international obligation, he becomes more and more angry and indignant with the rulers of Japan for the obstacles they put in his path. He suspects that they interfere to depreciate the value of the foreign merchants' silver coin, the dollar, by declining to accept it at its full value at the treasury; he sees that they do not provide Japanese currency in adequate quantity in exchange for dollars as the treaty had provided; he sees that the Government are in no hurry to provide a convenient locality for the foreign traders in accordance with the treaty; he sees that the Government practically prohibit the export of articles and encourage a monopoly in articles which they had engaged to set free from all restrictions; he sees that even the life of the foreign traders is not as carefully protected against the lawless violence of the Japanese nobles as it ought to be; and all these things seem to him, naturally enough, pure violations of faith, which, if persisted in, only war can avenge. He fails to remember that in the minds of the Japanese Government, on the other hand, the treaty, as a whole, produces a constant rankling sense of injury, and is regarded as an unjustifiable extortion which may fairly be evaded by any petty obstructions in their power. The English Consul is not responsible for the treaty, but is limited to facilitating its working: the Japanese Government, on the other hand, think little of *what* they contracted to do, and much of the motives by which they were induced to enter into the contract. It is not to be wondered at that a very deep sense of injury (justifiable in both parties from their own point of view) is rapidly growing in both.

The final measure to which Mr Alcock had recourse, as late as in the middle of last December, was a distinct threat of war. In the name of his Government he solemnly intimates that war is the only alternative, if the grievances complained of are not rectified, and the provisions of the treaty more faithfully carried out. Nor do we see that he had any other card left to play, when he found all the provisions of the treaty a dead letter, his efforts paralysed by the inertia of the Japanese Government, his office all but useless,—and, in fact, all the preparations he was there to superintend not only delayed, but indefinitely delayed, with no hope of improvement. In such circumstances he will find little comfort in Lord John Russell's reply, which ran thus:—

LORD J. RUSSELL TO MR ALCOCK.

Foreign Office, February 28, 1860.

SIR,—I have received and laid before the Queen your despatches to that of the 14th of December last, inclusive.

Her Majesty's Government approve your general conduct; but it were to be wished that you had not threatened war. If the grievances are not redressed and war is not made, the character of the British Government is in some degree impaired; if war is made to enforce the observance of a commercial treaty, we run the risk of engaging in protracted hostilities, and of earning a reputation for quarrelling with every nation in the East. Time and patience may remove many of the difficulties of which you complain. The Japanese, on their side, may well be jealous of Europeans, who insult their usages and carry away their gold.

You should endeavour rather to soothe differences than to make and insist upon peremptory demands. Our intercourse is but newly begun; it should not be inaugurated by war.—I am, &c.

(Signed) J. RUSSELL.

This is a very sensible and temperate despatch, of the tenor of which we heartily approve; but surely it demonstrates more conclusively than anything else the mistaken character of the policy which gave birth to this treaty. Here is a man of the first ability, who has been more than half a year at his post demanding day after day the practical concession of terms which the Japanese Government had formally granted,—day after day thwarted by the Government, and sometimes insulted by persons of note and rank among the people,—unable to win a single step,—constantly receiving complaints from his subordinates at the other ports that their position was difficult, often dangerous, and scarcely tenable at all,—and yet when he ventures to point out to the Government the alternative of persistence in such a course, he is,—rightly we think—met with a rebuke from home. He adopted the only course open to him for discharging the functions for which he was sent out,—and that course is censured. Is it not, then, logically incontestable that there was some original defect in his commission,—that while he appeared to be the representative of rights, he was, in the opinion of his own Government, only in a position to ask favours, which, if not conceded by the Japanese, he had no right to appeal to his own superiors to enforce. That this is the real view taken by Lord John Russell is evident, we think, from the tone of the despatch we have quoted. He says in effect, 'The treaty gives us legal rights, but as we are 'well aware that it was not freely entered into by the 'Japanese, we should be ashamed to make these rights the 'foundation of any extreme measures, and it would be well 'for you, while availing yourself of every peaceful solution, 'to eradicate from your mind the idea that we would enforce 'the bargain.' Surely this is scarcely a position worthy of the representative of a great country like this. It is vain to attempt

to intimidate, even for their own benefit, nations which we have no just right to coerce. Sooner or later they are certain to bring the case to an issue, and then we must either admit the insufficiency of our claim, or be launched into aggressive and unrighteous wars.

THE "NATIONAL REVIEW" ON MR BRIGHT.

There are but few cases in which elaborate personal estimates of living politicians are desirable or even legitimate. It is scarcely fair to judge any man in the crisis of a warm political conflict by the temporary aspects of an unfinished career. It is not till the end comes, and the softening effect which the removal of public men from the scene is certain to produce comes with it, that even impartial critics can trust themselves to estimate fairly the true proportions of a statesman's mind, and the general tone and temper of his character. There is but one legitimate exception to this rule:—when it happens that a public man of eminence and capacity trusts for his public influence neither to the power of his argument, nor to the weight of his judgment, but simply to the passionate eloquence of his imagination and unscrupulous denunciatory instincts. Then it becomes a duty for the political critic to make this clear to the public, and to draw broadly the distinction between the infectious persuasiveness of narrow and ardent prejudice, and the just persuasiveness of profound conviction,—between the exciting effect produced by one who sincerely regards all his opponents as children of darkness and iniquity, and the moral effect produced by one who can see and state his adversary's case at least as strongly as his own, and deliberately give judgment on the whole evidence before him.

Mr Bright's large public influence is a very striking illustration of the weight which a massive character and great intensity of mind can give to the most transparent fallacies and the most reckless statements of fact; and the more highly we estimate his power,—few indeed can estimate it much more highly than we do,—the more anxious should we be to show how little of that power is derived from accurate and just observation,—how much of it from passionate, blind, and blinding prepossessions. The critic in the "National Review" does this with unequalled power; and in a style the very opposite of Mr Bright's own,—a style in which almost every word represents either a fact of observation or a conclusion of science, in which not an epithet is chosen for mere effect without an honest induction of instances, and not a syllable of the trenchant indictment against Mr Bright is dictated by illiberal instincts or reactionary timidity. Indeed, the writer very wisely abstains from all political discussions. He arraigns Mr Bright on three counts: his sedulous encouragement of class jealousies and hatreds; his unscrupulousness in the use of facts which tend to deepen those jealousies; and the low and selfish tone of his foreign policy as exemplified, especially, in his recent remarkable speech on Savoy. On all these counts the writer makes good his case by repeated quotations from Mr Bright's speeches and letters; and if we needed any fresh illustration of the first two charges, it would be found in the language used by Mr Bright at Manchester on Thursday last. He is reported to have there reiterated a statement which is, we believe, totally false, and if false grossly calumnious, that there is a party in this country opposed, from purely selfish motives, to peace and confidence with France. "This treaty promised peace "and confidence with France, but there were persons con- "nected with the oligarchy and the military system who "wished for a different policy.....The treaty concluded with "France menaced this *patrimony* of taxation, and hence the "concealed opposition to its being carried into effect." We hold language of this kind to be the most culpable a public man can employ. The treaty with France has been honestly recommended and defended on one side, and, we believe, as honestly assailed on the other. It is well and fair to expose the weak arguments of the assailants. It is criminally unfair to charge them with sinister and corrupt motives of the most ignoble kind.

We cannot follow the lucid and masterly writer in the "National Review" through the various stages of his indictment, but we earnestly recommend those of our readers who are in any degree under the fascination of Mr Bright's influence to do so for themselves. There are few who appreciate that remarkable man's powers more highly than we do: and till quite recently,—till it became evident that, with all his professed love of democratic freedom in England, he really admires and defends the arbitrary despotism of France,—till we felt assured by his speech on Savoy, that he believed loyalty and patriotism to depend on the gains of labour and the price of land,—we have never despaired of him. We have continually cherished the hope that the fires of his ardent nature might be kindled at some holier altar than any on which he has sacrificed as yet. We have admired, without sympathising in, his sturdy and even ferocious advocacy of "peace at "any price,"—we have both admired and entirely sympathised with his eagerness to plead the cause of the Hindoos, his love of free trade, his hatred of the game laws. But the darker features which have of late years taken more and more prominence in his mind, can no longer be overlooked. The "National" reviewer points out, with just condemnation, the symptoms of increasing devotion to an agitator's career,—the marked likeness and marked differences between him and the late Mr O'Connell,—the growing tendency to adapt his moral tone to his audience,—and the far more dangerous significance of that tendency in a man who, like Mr Bright, is by impulse almost compelled to say what is in him, than in one who, like Mr O'Connell, was naturally an actor and a rhetorician. We have little hope that Mr Bright will himself profit by his critic's eloquent rebuke. If he would, he might still arrest the deterioration of political gifts such as few of his generation, or even of his century, have received. If he will not, he may in time become the Balfour of Burley,—if not even the Macbriar of his party,—and waste his splendid powers in the gloomy fancies of political fanaticism and of an insatiable intolerance.

NAPLES.

The condition of Sicily, probably of the Two Sicilies, is likely to be worse before it can be improved; and the worst feature in the Neapolitan crisis is, that if it were to terminate in a defeat for the Government, France would be almost certain to interfere to prevent Sardinia from reaping her advantage, so that a new cause for European disputes would inevitably arise,—while if, as seems at present much more likely, the Neapolitan Government were to triumph, it would not only prolong an execrable oppression, and irritate a chronic sore, but the result must be dangerous in the end to Piedmont in one way or another. Either the triumph would encourage Naples to take up the Papal cause more actively,—which would, perhaps, be the best of any probable event for Piedmont; or what would be far more embarrassing,—the cry from the Liberal party in Italy for Victor Emmanuel's interference on behalf of the oppressed Neapolitans might become too strong to resist, dangerous as the attitude of France and Austria would necessarily make such a step. In almost any case the fate of Naples and Sicily must be full of risk for Piedmont; but the greatest danger to which she is exposed is lest the continued and brutal oppression to which suspected Liberals are subjected in that unhappy kingdom should at last force Victor Emmanuel into remonstrance and interference. It is scarcely possible that, after the position which he has attained and well deserved, as the head of the Liberal party in Italy, he will be able to witness the gross oppression of a neighbouring kingdom without being drawn into some kind of championship, and ultimately a quarrel.

We know the kind of Government which has given to Piedmont such well-deserved fame. Side by side with it,—perhaps almost adjoining it, if the other Transappenine Provinces of the Pope should follow the four Legations,—will be a State of which the following letter, fresh from the hands of one of the most eminent and able of Neapolitan patriots, is a faithful description:—"The last news from Naples will be well "known to you. I do not think that there has been in the "world a more savage despotism. That which the *Journal* "*des Debats* relates is only too true, but it is not all "the truth, since it touches only on the black and ferocious "persecutions, and is silent on the brutal inhumanities com- "mitted in the prisons, in the islands, as well as on the con- "tinent. Some have died under the torments, and all the "ministers of these cruelties have been praised and rewarded

" by the Government. To the most wicked have even been " given titles of nobility, when they have money to buy them, " and they have been placed at the head of the reaction in the " provinces. The Goverment pays the army only, out of the Ex- " chequer, but has also at its disposal the City Guards, who are " the dregs of the lowest part of the populace, and provokes in " the people (who are purposely starved by reckless financial " and commercial decrees) the frightful passion of avarice, " as the most efficacious means of getting rid of all honest men. " Hired emissaries scour the country, inviting the country— " people to kill the Liberals in case they stir, and per- " mitting the pillage and the distribution of their property. " The lazzaroni of Naples have been formed into companies, " each of which is commanded by the most debased inspector " of police, and armed with short arms (since they would " not know how to make use of fire-arms) and with strong " iron-pointed sticks, that they may throw themselves upon " the Liberals on the first occasion and destroy them. A part " of the lazzaroni who refused to comply were thrown into " prison. Many nobles are imprisoned, very many have " concealed themselves ; the most select of the citizens and the " most distinguished men of talent are pounced upon by the " police, and are thrown into the most fœtid prisons; and men " taken from all classes indiscriminately are banished, without " accusation or legal process, from the kingdom.....The King, " a mixture of the tiger and idiot, does penance for the fall " of the Palmerston, Russell, and Gladstone Cabinet, and " with pious emotion prays that the new Holofernes may find " a Judith. I would speak to you of many other horrible " iniquities, but time, space, and strength fail me."

Now, is it possible that a free Government in Piedmont can long stand side by side with such a Government as this? It is only, alas! too obvious that the complications of the Italian question are not yet unravelled,—that the new Italian kingdom will have to incur many fresh risks, as much from the cause which it will be expected to represent, as from the enemies it has made.

Agriculture.

GAME-PRESERVING.

GAME AND THE GAME LAWS.

All experience has taught us that when a vicious law or a demoralising social evil is upheld by a powerful and wealthy section of the community, no remedy can be obtained by half-measures or partial opposition. No half-hearted advocacy of the commonweal against the interests or prejudices of the powerful have ever availed ought, save to bring the wrong into notice by discussing it. Now, no one can go about amongst farmers without becoming aware that game-preserving—*i.e.*, wild animals kept on their farms by the landlord at the tenants' expense—forms one of the most galling and serious obstacles with which very many farmers have to contend. Complaints about game are usually treated by the landlords in one of two ways,—either they are disregarded and belief that they are unfounded is affected, or they are dealt with in a jaunty sort of way, saying: "Oh, farmers are all fond of sport themselves, and they surely have no wish to deprive their landlords of sport and drive them away from the country," and then rambling tales are told of how Farmer This always boasted that his farm showed his landlord good sport, how Farmer That brought out luncheon to the shooters, or how Farmer T'other joined the gamekeepers in hunting down poachers. But all this does not touch the real question, which is, whether the occupier of agricultural land can safely permit another person to reserve to himself the right to stock the farm with game, and to send his own servants to watch it. The question is not whether the game-owner shall exercise his rights to the point of ruining the tenant, or shall only keep what the game-owner and his keepers may call a moderate stock of game, but whether any one, save the tenant, who pays the rent, whose capital feeds the game, shall have the power of defining what is or is not an excess of game. Farmers must determine to obtain absolute control over the game on their farms, as well as over the sheep and turnips, or failing to do so, they must not take the farms offered to them with game reservations. With a continuance of steady and moderate prices for grain, while wages are rising and larger outlays of capital are every year required to make farming profitable, farmers will find this game question must be looked in the face, that they must deal with it practically and decidedly. It is not a subject landowners can much longer stave off with a growl or a jest, but must soon make up their minds whether to prefer rent or game. Directly and indirectly, game and game rights form at this moment the main obstacle—the pivot on which all others turn—to the advancement of practical husbandry in England.

It is the absence of defined and practical views of the bearing of game-preserving on husbandry, which greatly detracted from the value of a paper read recently at the London Farmers' Club, by Mr H. Corbet, on "Over-Preservation of Game." Indeed, the very title of the paper indicates an indisposition to grapple in earnest with the subject. Yet from this paper, and the discussion which followed it, some useful suggestions may be gleamed. Mr Corbet, somewhat needlessly, disclaimed all intention "to make an attack on the national sports of the country," and then commented on the general popularity of fox-hunting and kindred sports, in which may fairly be included partridge and grouse-shooting, and referred to the zest with which many farmers enter into such sports, for assuredly game-preserving, as practised in the present day, is anything but a national pastime. It is more adapted for the despotic regions of the Continent, from whence it was derived, than for this country. And it is against the battue that Mr Corbet has directed all his force. He referred to statements made by the late Mr Pusey, by Mr John Grey and others, of the injury caused to farming crops by game, and adverted to the great slaughters of game from time to time recorded in the country newspapers—topics with which we have at various times felt it our duty to make our readers familiar.

We all know that the reservation of the game to the landlord implies the appointment of gamekeepers who have free access to the farmers' lands. Hear how Mr Corbet speaks of them:—"The rabbits naturally bring me on to their sworn friend and protector the gamekeeper. One loathes the very name of such an office. You must all know the authority he exercises—a power so much above his proper station in life; and that, as a rule, he proportionately abuses.....The farmer and his men are continually under his supervision. There is nothing they can do but it is his duty to overlook them. He stands by the mowers to see that they do no harm to *his* nests. He struts into the reaping field to make sure they don't hurt *his* birds. The boy with his scare-crow, the shepherd with his dog, and the little lass with her kitton, are all alike objects of his hatred and his tyranny.....He lays traps for the labourers, as has been proved over and over again.....He is incessantly making ill-blood between man and man, and he is the one great blot on our fair English landscape."

Of the truth of all this and much more to the same purpose we have no doubt, though the gamekeepers are not so much to blame for the evils they do as their employers, and such we believe to be very generally the feeling amongst farmers.

Next, says Mr Corbet, "How shall we remedy such a state of things?" He does not wish to abolish game or the game laws, he does not wish to trouble the Legislature at all on the subject; "but," he says, "I seek audience at once with the landlords, and I ask their agents and advisers to accompany me. I say the farmers of England are not enemies to sport; on the contrary, they like to see the gentlemen enjoy it. I say that they do not object to a fair head of game, but that as a body they would readily maintain it. On the other hand, I say that battue shooting is not sport, and that systematically rearing a large quantity of game, and then as systematically selling it, is slowly but surely lowering the character of English gentlemen. Let the owner and occupier rely more on each other. Let them free themselves from the thraldom of that officious ear-wigging, scandal-carrying, mischief-making keeper,"—in short to make the farmers the landlords' gamekeepers. This is, indeed, a lame and impotent conclusion. It is a delusion to say farmers, generally, will preserve game. They will not, nay they cannot, for game-preserving on cultivated land implies considerable expense and much interference with the operations of husbandry. Partridges and a sprinkling of hares may be kept by farmers who themselves like the sport, but rabbits and pheasants, or a large stock of hares, will never be kept by the farmers. Mr Corbet very properly denounces the letting the game reserved from the tenants to other persons.

Mr Parkinson mentioned as an illustration of the statement made by the lecturer that the preservation of game favoured the accumulation of other vermin, that "on an estate in Nottinghamshire which was highly preserved, and which belonged to Lord Chesterfield, it was no uncommon thing for the rats to take a row of wheat the whole length of the field; and the damage caused by rats in consequence of the preservation of game was almost equal to that which was done by the hares themselves." Another instance of game injury, on the Langar estate of the late Lord Howe, was mentioned by the same speaker. Mr Wright, who knew the estate, having purchased it and got rid of the game, "was surprised at the improved vegetation in two or three of the grass fields, and on his inquiring the reason, the reply given was that the ground formerly was poisoned by hares and rabbits." And Mr Parkinson added: "Mr Mechi had recommended the application of a large quantity of guano to the land adjacent to the woods. He had seen that experiment tried, and what was the result? The damage done by the animals was at a distance, and the acre near their home was comparatively neglected." Several land agents and a proprietor advocated the game-preservers' view of the question. Mr Fisher Hobbs said: "He had himself been the occupant of a game farm for 13 years, and had had some little experience of the damage inflicted by game, for surrounding a considerable portion of the arable land was a large extent of woodland, and he must say that his crops were greatly injured by the game. This farm had been in the hands of the owner, had been farmed high, and upon which the game had been preserved. *A promise was made that the game*

should belong to the tenant; but, like many other verbal arrangements in that day—and he feared it was too much the case in the present day—the promise was not fulfilled. The fact was, that landlords, generally speaking, did not like to tie themselves down to any contract with regard to game. He was well acquainted with several districts in the kingdom where there were large tracts of land for which, if the farmers were ready to pay 10s an acre for the game, the landlords would not let them upon principle." Here we meet with the "principle" of feudalism in one of its modern phases. Landowners reluctantly consider their engagements with tenants as plain commercial bargains, but endeavour to retain something of the old feudal spirit in all their dealings with the occupiers of their farms. This should be strenuously resisted by the farmers. Let the proprietors who "on principle" decline to let their tenants the game on their own farms, be driven to farm the land themselves. As the law now stands in England, if no reservation of game is made by the landlord it belongs to the tenant, and therefore every farmer taking a farm should insist upon having no stipulation whatever about game. He will then have the means of deciding for himself what is and what is not "over-preservation of game." This is the only present and practical remedy. Mr Hudson, of Castle Acre, said that his landlord, the Earl of Leicester, lets him the shooting with the land, and all the tenants on the Earl's estate hire the shooting with their farms." Of course they can thus keep little or much game as suits their views and interests, but we hear of nothing but partridges and a few hares for coursing as kept upon those farms.

It may perhaps be difficult for farmers somewhat advanced in life to take such decisive ground on the subject of game as younger men, but let any young farmer of capital consider, before he enters upon a farm without having the absolute right to all game, whether he cannot employ his capital and his exertions in a colony or in some other pursuit better and more safely, than on a farm where his crops will be devoured by vermin and his peace of mind harassed by disputes with gamekeepers, the steward, and the landlord. We lately met with a farmer—a good one and of competent capital—who told us he had just given up an excellent farm, and was then living out of business, waiting until he could hire a farm on lease and with the control of the game, and that he would not take any farm on any other terms. A few instances of this sort on a game-preserved estate would soon bring the owner to his senses.

AGRICULTURAL WAGES.

The advance made of late years in the wages of agricultural labourers has often been noticed in speeches and writings. In connection with such advance a new sign of good omen appears in advertisements for agricultural servants of good character which have been inserted in several of the provincial journals. This indicates that agriculturists, recognising the advance of rural wages, are determined to seek men of competent ability and good character for employment, instead of relying simply on the unemployed men—good or bad, as might be—of their own parishes or immediate districts. Thus, the *Mark Lane Express* notices that in the *Nottinghamshire Guardian*, Mr Brett advertises for "two agricultural labourers," and states in his advertisement that "none need apply but men of industry and good character." Nothing will be more conducive to the well-being of the agricultural labourers, or to the interests of their masters, than that good workmen should be sought, even from a distance, in preference to taking the first who offers, because he dwells in the same parish. Another advertisement in a Sussex paper is mentioned where "liberal wages and a cottage provided" are stated as inducements to agricultural labourers to offer themselves to the advertiser. All this shows the days of "surplus labour," and subscriptions to promote emigration from the rural districts, have passed away.

Literature.

Poems and Essays. By the late William Caldwell Roscoe. Two Vols. Chapman and Hall.

These remains of a man lately passed away, and far removed from the ordinary stamp both in character and power, were well worth collecting and giving to the world. Mr Roscoe was scarcely at all known, even in more peculiarly literary circles, for he seldom appeared in general society, and all his writings were anonymous. Yet for many years he had been a diligent and indefatigable producer; his poetry was unquestionably superior to that of many who have achieved what is called "a name"; and as a literary critic he has, in our deliberate judgment, left no equal behind him. He died early, but not before he had reached the full maturity of his powers—for his was a mind that ripened early: if he had lived he would have done more, no doubt; but we are not sure that he would have done better.

His Poems will be differently estimated according to the special standard of poetry set up by the judges for themselves. He had the organisation of a poet; he had all the mental and moral qualifications which go to make up the poet; and he had these in a remarkable degree and of a high order; but he never attained perfect mastery in the more mechanical portions of his art; his thoughts and fancies were much in advance of his power of metrical expression;—and, as he was not content to clip or curtail the former, and never quite perfected the latter, the reader is often conscious of a want of harmony and completeness which greatly mars the general effect. His smaller poems are elegant and pleasant; but we confess they do not greatly interest us, though they make us sure we should have been both pleased and interested in the man. The two dramas are productions of far higher merit. "Violenzia" especially (like another piece which appeared some years ago of exquisite beauty and great power, "Love's Martyrdom,") is *so* good that we can scarcely understand why it should have been so little known. If it had come forth as the second or third poem of an author of *established* fame, we are certain that, though it might not have in the first instance *made* that fame, it would have been universally held to have in no way derogated from it. The simplicity and nobility of its conception are most remarkable; the execution, especially in the latter part, is sustained at a high level of excellence; but the effect is considerably marred, to our ears at least, by redundant words and syllables which spoil the rhythm, and by imperfect or obscure expressions, which longer elaboration, a severer standard, or greater *professional* skill might easily have avoided. Even as it is, it may rank with "Ion," "Love's Martyrdom," and "Edwin the Fair," as among the finest dramatic poems produced since "Philip Van Artevelde." By some it will be deemed to contain a much deeper kind of power than any of these, though to be less perfect in execution.

But whether or not we may deem Mr Roscoe's poetical powers equal to the production of a really first-class poem, there can be no doubt that they were of a nature highly to enrich and embellish his prose compositions. This, indeed, we believe to be the most common and serviceable use of all poetic talent which falls short of high *genius*. Thousands, from failing to perceive this, have wasted years and efforts in becoming mediocre versifiers, which, differently directed, might have easily placed them in the first rank of prose writers. There is often more real poetry in prose than in verse; and prose is usually the better, not for a *mixture* of poetry, but for a *flavour* of it. Of the second volume of this collection, which contains Mr Roscoe's Reviews, it is impossible to speak too highly. They are subtle, delicate, appreciative, full of quiet humour, high in standard, pure in tone, profound in insight, and clear, vigorous, and beautiful in style. They are in fact unrivalled specimens of an art now nearly extinct—that of genuine literary criticism. Jeffrey's reputation was made by his criticisms: yet Jeffrey never wrote anything half as deep, just, or true. In fact his range was narrow, his standard limited, and his knowledge but scanty. He had a quick and keen taste, and a sharp pen; but his genius was essentially depreciatory, not appreciative. He would be conceived shallow and flippant were he to write now as he wrote fifty years ago. We should especially single out for admiration among the many gems of Mr Roscoe's second volume, the articles on Tennyson, Moore, Defoe, Bulwer (to whose merits, however, he does scant justice), and "Ghosts of the New and Old School."

The short Memoir prefixed to these volumes is full of interest. There was little of outward event to relate; but the biographer is bent upon making his readers thoroughly understand the character and nature of his friend; and he succeeds to a most remarkable extent.

Travels in Eastern Africa; with a Narrative of a Residence in Mozambique. By Lyons McLeod, Esq., F.R.G.S., late H. B. M. Consul at Mozambique. Hurst and Blackett.

[first notice.]

Mr McLeod's name is already familiar to the English public from its connection with the affair of the Charles et Georges; which, originating in the zeal of Her Majesty's Consul for the suppression of the slave trade at Mozambique, has been eventually the means of bringing to light the real nature of the French free labour emigration scheme as carried on at that place and elsewhere on the coast of Africa, and of calling down upon it the prohibition of the Emperor of the French. Mr McLeod has thus reaped some immediate fruit of his exertions; it only remains that the prohibition be enforced on the reluctant slave-dealers, and that Portugal should put a stop once for all to the inhuman traffic that is still carried on in the most flagrant and cruel manner in her African possessions, with the knowledge, and by the connivance, of her officials. There are, we trust, few places in the world which, if laid open in a similar manner by an intelligent and impartial observer, could reveal such a dark picture of avarice, perfidy, cruelty, and vice, as is painted by Mr McLeod in his "Narrative of a Residence in Mozambique." We are driven almost to disbelief by the enormity of the wickedness detailed in these pages; yet the directness and circumstantiality of the evidence, and the manifest sincerity and truthfulness of the writer, convince us more and more as we read on that the truth is not even exaggerated. It is no matter of surprise that, after struggling for nearly a year with the accumulating difficulties of his position, the Consul was forced to remove the British flag from a place where it was held in contempt, and where he and his family were not only insulted and ill-used, but lived in daily peril of their lives, from the unrestrained animosity of the slave-merchants. It is, however, to be regretted that endeavours so arduous and indefatigable in the discharge of his duty

as those of Mr McLeod were not more heartily seconded by his own nation; and that, by the helplessness of his position among them, the slave-traders were encouraged to despise the power of England, and her ineffectual attempts to enforce the observance of their own disregarded laws. A rapid survey of the Consul of Mozambique's experiences will best show what faith Portugal keeps in enforcing her international treaties.

In December, 1856, Mr McLeod, his wife, and maid, embarked for the Cape on board the "Ireland" screw mail steamer. At first starting he had a foretaste of the treatment he was afterwards more liberally to receive. He was a Government passenger, and, as such, accommodated with the worst cabin on board. On his remonstrating that it was not fit to receive a lady, the bed-room steward replied that the owner of the vessel "hated all 'governments,' and when he got them on board of his ships he always served them in that way;" adding, "You see, sir, all 'governments' are supposed to be gentlemen—'governments' are not supposed to be married." After a little time the general discomfort of the vessel caused many of the passengers to quit her at Plymouth; and the 'government,' promoted to better quarters, reached the Cape of Good Hope in January, 1857. Here he found nothing prepared for his onward journey, and was delayed for several months in consequence. One attempt, indeed, was made to forward him to his Consulate. "An old condemned schooner" was refitted "to take the Consul to Mozambique, and, by her imposing appearance in that port, awe the slave-dealers of Eastern Africa;" when, suddenly, one night there was heard over the harbour of Simon's Town a cry of distress proceeding from the "old Dart done up," "Help! help! for Heaven's sake, the Consul's yacht is sinking." Immediately, the boatswain's mates' whistles were heard on board of all the men-of-war in the harbour. "Away, there—boats' crews—away, there, away! Hurry up lads; that d—d thing of paint and putty is going down at her anchors."

Time rolled on. June came before any vessel could be found to take the place of the old Dart, proved to be unfit even for a Consul's use. The unhealthy season was come. A Portuguese gentleman from Mozambique strongly recommended that no ships-of-war should run the risk of sailing up the Channel at that season; in the meanwhile the relations of this considerate gentleman were laudably obeying the old proverb "to make hay while the sun shines," and shipping off full cargoes of negroes before the arrival of the Consul to spoil the trade. In July, however, he did reach the scene of his labours; was introduced to Vasco Guedes, the Governor, and furnished by the Portuguese gentleman, already mentioned, with a house on the mainland; one on the the island on which the town is built could not be obtained; the slave-dealers did not wish the Consul to be in near neighbourhood to the Governor, and thought, by isolating him, to have him more completely in their power. After events showed the sagacity of this proceeding on their part.

Things went smoothly enough as long as the "Hermes" lay in the port of Mozambique, and as long as the slave-traders still hoped to win over the Consul to, at least, an acquiescence in affairs as they were. The only thing that gave him an insight into the real condition of the natives under the Portuguese rule,—besides the intelligence he had collected in his coasting voyage from the Cape,—was the condition of the negroes in the house he had hired. "The appearance of some was really too horrible to be described." Half starved and inhumanly beaten, they were in this establishment, and universally in Mozambique, far worse off than on the cotton fields of America, or the sugar plantations of Cuba. It is with reluctance that we dwell on this part of Mr McLeod's revelations of Portuguese cruelty, but, in order to understand the real character of this horrible traffic, and the urgent call of humanity for its suppression, we must quote some of the less horrible instances out of those collected in his work:—

The allowance of food was really not sufficient to sustain life, consisting entirely of small grain called milho. This allowance was served out about once a week; a day more or less seemed to be a matter of indifference. The food served out in this manner was, of course, seized upon with avidity, and what was intended for a week's supply seldom lasted for more than two or three days, and on the fourth day all were crying for food. Until the end of the week they had no chance of receiving any from their own masters; they must, therefore, rob them, or some other person; when found out they were flogged. Hunger was ever goading them on to rob; the lash was always ready, therefore the whip was always going..... The reason for giving them so little food is not that their masters are unable to feed them, but simply that they come of a fierce race, and it is necessary to keep them in subjection. The Portuguese are always dreading their slaves rising against them; and, therefore, they exercise all their ingenuity in devising means to keep them down, and display a refinement in cruelty which I am not aware exists in any other slave-holding community. Here at Mozambique, where slaves are plentiful, and where there is no difficulty in replacing them, they are not valued as in those places where a human being represents so many thousand dollars or hundred doubloons. Here a slave is only worth forty dollars, even when the slave ships from Réunion or Cuba lie in the harbour. If a slave is refractory, and flogging only makes him worse, the arbitrary master, enraged at his continued disobedience, bids his brutal overseer flog him until "he will require no more." The master looks on and gloats over his vengeance. The slave perishes under the lash—a few dollars will replace him. Not so when he cannot be replaced except at considerable expense. This is one thing which peculiarly aggravates the domestic slavery of Mozambique, viz, the facility with which the negro is replaced. To keep them in subjection, every opportunity is seized to destroy all sympathy with each other, and all natural affection. The son is made to flog his mother and his sister; the father flogs his daughters, and also the woman who bore them for him—all at the command of their owner, who can do what he pleases. Women are made to flog, and that under circumstances too revolting to be told.

One day Mr McLeod was the involuntary witness of a most cruel flogging infliction upon a black man. "Anxious to put an end to this revolting scene, I asked—nay I begged—this fiend in woman's form to pardon and release the man. Instantly her dark eye was lighted up with the frenzy of intense hatred, and, turning to me, she said, 'For anything with a white skin, I would pardon; but for you, thou champion of the slave, never!' Then turning to the executioners, she yelled, 'Flog, sons of hell, flog! or else I'll pour the boiling oil upon you.' This drew my attention to a neighbouring fire, on which stood a pot, which I afterwards learnt contained boiling oil. To remain longer would only have added to the sufferings of the slave. This was a case of domestic slavery in which of course I could not interfere." The offence of this man was that he had refused to flog his mother.

We turn away sickening from such atrocities, only to meet with details scarcely less fearful of the working of the slave trade among all classes, from the Governer to his meanest white subject, and from the native Prince in league with the slave-merchant to the wretched victims of his mercenary and bloody wars. The slave trade is prohibited by the decrees of the Court of Lisbon—true: how, then, is it so rampant at Mozambique? The British Consul, that incubus fastened by us upon the unwilling Portuguese, has fathomed the mystery and published it to the world; the very persons sent out from Portugal to carry out her decrees are those who systematically violate them.

There is no mistaking the meaning of the smile and shrug of the shoulders with which they (the people of Mozambique) reply to any one who ventures to state that the Portuguese Government is sincere in its desire to suppress the slave trade. I have been told by persons in Mozambique, "Yes, the Government of Portugal, after ruining us, are sincere in their endeavours to prevent us engaging in the traffic; and they take the best mode to prevent us benefiting by that traffic; for they send out their officers here on paltry salaries, which they well know cannot support life, and make them prevent us engaging in the slave trade. But the Government of the King knows well that the soldiers have not been paid for more than four years, and that many of the officers have not received a *vintim* or farthing from the treasury for more than ten years. How must these men live? By the slave trade. So that they deprive us of the benefits which were formerly derived from the slave trade; and to prevent legal commerce, which would supplant the trade in the natives, they throw every obstacle in our way." I must say I observed, while at Mozambique, that this was a very fair statement of the case.

The conclusion to which the writer himself came as to the cause and remedy for this state of things is clearly laid down in the following extracts:—

The statements made in this narrative of facts, which came to my knowledge while at Mozambique, and which are so notorious that the Government of Portugal offers no denial to them, fully justify the charges of complicity made against the Government of the King, and show that the efforts made by that Government are a continued imposition on the credulity of England, and other nations engaged in this great question of the cause of humanity. The remedy is simple, while the proof of sincerity on the part of Portugal in suppressing the odious traffic is very easy.

Banish those persons who are well known to be engaged in the slave trade.....without whose assistance the Portuguese officials arriving at Mozambique, strangers to the country, could not engage in selling the natives.....change *all* the officials, and encourage the emigration of 1,000 Europeans to the province of Mozambique, that territory would soon be richer than the Brazils, and many of the Brazilian planters would invest in land, and develop the resources of a country where labour is so plentiful, that the sugar-growing countries have obtained their labour from it for ages.

But to do this effectually, it will be necessary and only just to give the officials going out to be employed under the new system salaries adequate to their wants. Pay them well, and render them honest. Now they obtain an appointment at Mozambique, with a salary which is not sufficient for their requirements even in Portugal.....but the appointment is known to be worth so much more, because those who have held it have returned to Portugal with a certain amount of wealth, that amount well known to the Government and nation at large; and also as well known the means by which that wealth was obtained; namely, the buying and selling the great product of the country which has alone been developed —that of its natives. These human beings are bought from their relations or their enemies, and are supplied to the slave ships at an enormous profit. A Portugese official knows the terms on which he takes the appointment—a small salary, and the opportunity of making a large fortune by the slave trade.

Edinburgh Review. April. Longman.
National Review. April. Chapman and Hall.

The Treaty of Commerce with France affords a theme for articles in the present numbers of the "Edinburgh" and "National" of a very different tone. We can hardly say that the writers are antagonistic to one another in their arguments, though they arrive at such opposite conclusions. They regard the Treaty from entirely different points of view, and it is according to the relative importance to be assigned to these that any judgment on the respective value of their opinions must be based. The "Edinburgh" reviewer,

looking simply to the anticipated benefits to the "commercial relations of England and France" from the Treaty, carefully turns his head away from all other considerations. The Treaty, he says, "has been, it will yet be, assailed by every form of class-interests, of national prejudices, of Protectionist fallacies, and even by the hypercriticism of the straitest sect of Free-traders; but, upon the whole, we are content to stake the future relations of England and of France, upon which the peace and welfare of the whole world largely depend, upon this great trial." Thus defined, the argument is simply an amplification and emphasisation of one of the points of the more general argument with which the "National" reviewer deals in his trenchant philippic. Mr Gladstone's Budget is characterised by the latter writer as "a good thing, done in a bad manner, and at a wrong time; a measure, or rather, a series of measures, sound to a certain extent in principle, and possibly beneficent in result, but suggested by motives that are more than questionable, brought forward in a fashion that is almost cynical, and carried under circumstances which almost transformed a right into a wrong." The "Edinburgh" reviewer quotes freely from M. Chevalier; covers his pages with statistics to prove the drawbacks to national progress on both sides of the Channel from the commercial restrictions, to the entire removal of which he considers the Treaty and Budget to be the first step; points out the great material progress of France even under the old system; and reiterates the well-known and now generally accepted praises of a system of free competition. The "National" reviewer, on the other hand, dealing with "The Budget and the Treaty in their Relation to Political Morality," tacitly accepts the argument of the critic in the "Edinburgh," but holds that it is far outweighed by the moral considerations which he urges against the course adopted by Mr Gladstone. As a matter of finance he considers it very questionable; he distrusts it with reference to the motive which actuated Mr Cobden in negotiating it, we mean the determination to compel a large reduction of the public expenditure at a not distant period; he objects to it as substituting, under cover of a treaty with a foreign Power, direct for indirect taxation to the amount of four millions sterling; but, above all, he takes his chief moral objection to the Treaty, that it enables the Emperor of the French to evade the provisions of the French constitution which would have given a veto to the Legislative Chambers on the new free-trade policy. This he holds to be an inexcusable act on the part of a Constitutional Government such as that of England.

The other political article in the "Edinburgh" demolishes very completely the French view that the annexation of Savoy does not sensibly affect the interests of Switzerland, and is not a matter worthy of the attention of all the Powers of Europe as an infraction of solemn treaties. The writer displays rather too much of the animosity which has recently so strongly animated the pages of the "Edinburgh" with respect to Piedmont. The conduct of the Piedmontese Government in the Savoy question has been clearly discreditable enough to render it quite unnecessary to have recourse to vague sneers at her Italian aspirations.

The "National" contains a severe criticism on the Government Reform Bill, the tendencies and real significance of which are forcibly pointed out. The writer does not apprehend revolution or anarchy as the result of the adoption of the democratic basis of representation, but an immediate deterioration and a slow but certain demoralisation of the national character, as embodied in Parliament and the Government. Expressing himself as favourable to a fair reform of the representation, he denounces what would virtually amount to a transference of the entire governing power to one class, the most numerous but the most ignorant. Another slashing article, which forms a seasonable appendix and illustration of the former, places before the public in striking array some of the reckless and unscrupulous assertions in which Mr Bright is pleased from time to time to indulge. If the writer is severe in his condemnation of such a disregard of moral responsibility in a public man, he speaks by book, and his facts precede and justify his judgments.

The "Edinburgh" finds an object for its criticism in Mr Darwin, whom it accuses of erroneous statements of facts, and a vagueness in other cases which renders it difficult to confront him with the results of natural science. There is a short paper on the "Expense of Public Education" in England; and a tame and rather dull one suggested by "De Broglie's Church and Roman Empire." "The Youth of Milton" and "English Local Nomenclature" are discussed in agreeable papers. The old "Edinburgh" feud with the Tories of the days of Castlereagh is revived in a notice of the "Civil Correspondence of the Duke of Wellington," who, as Sir Arthur Wellesley, is somewhat sharply criticised by the reviewer—taking his own confessions and counter-statements as the text. The Shakspeare Collier controversy is very lamely handled in a confused and irresolute article.

The "National" makes up its complement of articles in a more uniformly satisfactory manner. There is a masterly paper on Plutarch. "Madame Récamier" is the subject of a lively paper, from one who was on terms of personal acquaintance with that fascinating queen of French society. We do not often meet with an historical essay of such ability and soundness as that on "St Thomas of Canterbury." The character of the Chancellor-Archbishop is admirably elucidated, and incidentally good service is done by confuting Thierry's idle theory of the complete distinction of the Norman and Saxon races in the days of the earlier Plantagenets. There is another timely, vigorous, and lucid historical article on "Papal Rome," in which the test of actual history is applied to the dogmatic assumptions of the Ultramontanists as to the inseparability of the spiritual and temporal powers of the Pope. A sketch of the rise and fall of "Christianity in Japan"; a theological article on the characteristics and authority of the "Acts of the Apostles"; a rather hypothetical but important article on "The Testimony of Geology to the Age of the Human Race," in which recent flint-head theories are discussed and favourably criticised; and a powerful and searching examination of the system of "Cerebral Psychology," recently developed by Mr Bain in his elaborate volumes on the Human Mind,—complete one of the best numbers of the "National"—taken as a whole—that has yet appeared.

THE ART-JOURNAL. April. Arthur Hall, Virtue and Co.

THE very good engraving of Wilkie's "Blind Man's Buff," which we find in the present number of the "Art-Journal," would alone recommend it. There is, besides, also from the pictures in the Royal collection, a "St Catherine," by Domenichino, which has considerable strength and grandeur. The third steel engraving gives us a statue of "Chastity," by J. Durham, which, though rather deficient in the amount of regular beauty desirable in a statue, possesses, in the attitude, much dignity and easy grace. The edition of Shakespeare just published by Mr Routledge is reviewed, and the admirable illustrations of Mr Gilbert, a few of which are reproduced, are done full justice to. The other illustrated chapters treat of National Flags, Drinking Fountains, South Wales, the Hudson River, and Waltham Abbey Church.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The French Government has at last begun to move in the very important affair of fixing the duties which, within the limit of 30 per cent. *ad valorem*, the productions of Great Britain are, under the treaty, to pay on being imported into France. The *Moniteur* contains this morning a report from the Minister of Commerce to the Emperor, recommending the way in which the fixation of the duties shall be effected, and decrees of His Majesty ordering the recommendations to be executed. There exists in this country a body called the "Superior Council of Commerce," composed of eminent dignitaries and functionaries; and this Council was in preceding years consulted on the changes which were from time to time made or proposed in the import duties on sugar, coal, iron, yarn, and other things. It is to this Council that (to use the words of the Minister), "the task of fixing the degree of protection necessary for French manufactures, within the limits laid down by the treaty of the 23rd January, 1860," is to be confided; and of the Council—a fact which will occasion universal pleasure in England—M. Michel Chevalier has been appointed a member. In order to accomplish its mission, the Council is first to "ascertain the average price of English articles during the six months which preceded the date of the treaty; and next, the "precise protection needed by the different branches of French manufactures." To throw light on these two points the Council is "to have the privilege, not only of examining French or foreign manufactures, but of having recourse to practical men who will enlighten it on technical points, and will enable it to solve, with a full knowledge of the subject, questions of detail; and, moreover, the Departments of Commerce and Finance are to aid it by all the means in their power." Having made a full investigation respecting each article named in the treaty, the Council will have "to turn into specific duties the 30 per cent. *ad valorem* duty fixed in the treaty."

To assist the Council, a staff of officers, under the superintendence of M. Herbet, formerly French Consul General at London, is to be charged to "prepare the programme of the labours of the Council, and to collect both in France and in England, the information which may be useful to place before it, to convoke the manufacturers and merchants of the two countries, whom the Council may have interest in hearing, and finally to record in minutes carefully drawn up the result of the investigations."

It is before this Council that, as regards the treaty, the real "tug of war" between the Protectionists and the partisans of liberal commercial policy will take place. The former will of course stand

out for the very uttermost farthing of the 30 per cent. *ad valorem* beyond which the treaty forbids them to aspire; the latter will, doubtless, strive to reduce the duties to the lowest limits possible. I need scarcely remark that any of your readers who, by means of information or otherwise, can assist the Council in its labours, and especially can make out a case for moderate imposts on English articles, are bound to come forward. Duty to our country requires that they should aid in making the market for our goods in France as large as they can; and they will show regard for the interests of France herself by doing the same thing.

I have not a list of the Council by me at the moment I write; but it is greatly to be feared that the majority of its members incline rather to protection than to liberality in commercial policy. M. Michel Chevalier will, to be sure, do stout battle for the good cause, and he will no doubt be powerfully aided by M. Baroche, one of the negotiators of the treaty, who has been appointed Vice-President of the Council. The Minister of Commerce himself, M. Rouher, who will act as President of the Council, will likewise give no small help. But still the Protectionists, both by their friends in the Council, and by their efforts before it, will be very formidable; and energetic means must be employed to combat them. Let it be remembered, besides, that no time is to be lost in acting; for the labours of the Council must be concluded in time to enable the duties which have to be fixed to come into force, in accordance with the treaty, not later than the 1st July.

The Committee of the Legislative Body on the bills relative to the modifications of Customs duties on cotton, wool, coffee, sugar, &c., proposes various modifications, and among them these: wool and cotton brought in by foreign vessels to pay 3f the 100 kilogs, instead of 5f as proposed by the Government; indigo, not from India or other producing countries, to pay 30f by French or foreign vessels, instead of 10f and 15f as proposed; and a prolongation of the periods allowed for the maintenance of the drawbacks on cotton and woollen fabrics exported. It remains to be seen whether these amendments will be admitted or rejected by the Government and the Council of State; but whichever be done will be of no great consequence.

Although French shipowners generally are favourable to the projected commercial reforms, they, as a body, are decidedly opposed to the abolition of the differential duties in favour of French shipping; and I observe, not without regret, that they are supported by journals whose devotedness to liberal commercial policy cannot be doubted.

The recently formed "Association for Commercial Reform" has issued circulars explaining its object and soliciting aid. Its object is, of course, the transformation of the French tariff from a monument of iniquity and absurdity into something worthy of the present century.

A brief reference was made in my last, *apropos* of the budget of 1861, to the fatal facility with which the present Government of France increases the public debt. On the subject of this increase I find some very interesting information in a proof sheet, which has been kindly communicated to me, of M. J. E. Horn's forthcoming number for the present year of the "Annuaire International du Credit Public." "On the 1st of January, 1800," says this eminent economist, "the annual *rentes* at the charge of the French Treasury were only 40,216,000f; on the 1st April, 1814, on the fall of the First Empire, they were 63,307,637f; at the revolution of 1830 they had risen to 202,381,180f; at the revolution of February, 1848, they were 244,287,206f; on the accession of the present Empire, the 1st January, 1852, they had fallen to 239,404,528f; but in the following years to the 1st January, 1858, they had swoleln to 310,880,359f; their ascending march continued during 1858, so that on the 1st January, 1859, they amounted to 315,993,646f; and at the beginning of the present year they had increased to 316,020,000f." M. Horn gives the following table of the increase of the annual amount of *rentes*, and of the nominal capital:—

Years.	Annual Rentes. f	Nominal Capital. f
1848	240,808,965	5,838,002,828
1849	280,842,513	6,860,211,353
1850	229,608,759	5,219,644,353
1851	233,440,981	5,345,637,360
1852	239,304,527	5,516,194,600
1853	219,929,486	5,577,504,587
1854	222,686,243	5,669,655,012
1855	236,442,772	6,082,877,853
1856	284,668,525	7,558,040,822
1857	299,099,242	8,031,992,466
1858	310,880,953	8,422,096,778
1859	315,993,646	8,593,288,155
1860	316,020,000	9,113,300,000

It appears from this table, that when the present Emperor seized the supreme power (1852) the nominal capital of the debt was only 5,516,194,600f (220,647,000*l* English), and that it is now 9,113,300,000f (364,532,000*l*). Yet, in spite of this enormous increase of very nearly 144,000,000*l* sterling, the revenue of France has undergone a marked expansion, and, moreover, taxation has been augmented.

At the recent general meeting of the shareholders of the Western Railway, a question of considerable importance was raised, viz., as to the propriety of the directors publishing beforehand the reports they present in annual meetings. It was very justly observed by several shareholders, that it is absurd to expect the shareholders to pass accounts they have not had the opportunity of examining; to fix dividends which they have not the means of ascertaining to be justified; to decide questions they have not studied. The answer is, that by law the directors are bound to give an account of their proceedings to a general meeting of shareholders, and that they cannot legally anticipate this. But the answer seems of small value; at all events, if minute technicalities are to be adhered to, there is no reason why the directors should not reserve their reports for the general meeting, and publish an abstract of them to enable the shareholders to form something like an idea of the real situation of things. The present system is certainly very objectionable; and, if I mistake not, was long since abandoned in England.

The dividend declared by the Orleans Railway Company for 1859 was stated in my last. The total receipts of this line for that year were 73,622,483f 37c, and the total expenses, including the charges for the loan, 40,720,159f 61c; there consequently remained a balance of 32,902,323f 76c. The company carried 443,835 passengers more than in 1858, but the greater part of them were troops of the army of Italy. The dividend of the Parisian Gas Company was also mentioned last week. Its total receipts for the year were 19,086,647f 86c, and the expenses 12,103,185f 11c, leaving a profit of 6,983,462f 75c. The reserve fund was stated to be 1,130,831f. The 36f dividend declared by the Paris Omnibus Company was in addition to the 25f previously paid. The clear profits of this company for 1859 were 2,637,922f, which were 250,000f more than those of 1858.

The Railway Company of the "Ligne d'Italie" is about to raise 15,000,000f by an issue of bonds. The Banking Company known as the "Union Financière et Industrielle" (MM. Saint-Paul and Co.) has, by decision of the shareholders, been dissolved.

A report is current in financial circles, that the Government will, before long, proceed to the conversion of the 4½ per cent. stock into 3 per cent.

There has been a slight improvement on the Bourse since last week; and as people here believe that the Savoy annexation question will not now lead to any rupture between the great Powers, it would doubtless have been greater had not the state of Italy occasioned uneasiness, and had not the news arrived to-day that the Bank of England has again increased its rate of discount. The following are the quotations:—

The following is an account of the markets:—

Flour, at *Paris*, has again been calm during the week. Yesterday, ordinary sorts were 51f to 53f the sack of 159 kilogs; good, 54f to 55f; inferior, 56f to 57f. The four marks have also been calm, and were yesterday 54f 75c to 55f for the current month; 55f 50c to 55f 7c 5for May; 56f 25c to 56f 50c for June.

Wheat.—At *Paris*, yesterday, business was not active; yesterday ordinary sorts were 31f to 32f the sack of 120 kilogs; good, 32f 50c to 33f; choice, 33f 50c to 34f. Of the provincial markets, 50 present a rise of from 6c to 1f the hectolitre, 13 a fall of from 25c to 91c, and 48 have undergone no change.

Cotton.—The market, at *Havre*, in the week ending Friday, was heavy. The sales were only 3,590 bales, and the closing quotations for low New Orleans were 99f the 50 kilogs, and for very ordinary ditto, 105f. The importations of the week were 28,836 bales. The demand this week has not been active; and low New Orleans was yesterday and the day before at 98f.

Coffee.—At *Havre*, in the week ending Friday, the sales were 125 sacks Hayti Port-au-Prince disposable at 79f the 50 kilogs in bond, and ditto Cape, 81f; 200 Port-au-Prince for delivery, 80f; 150 Cape and St Mark for delivery, 81f; 500 Gonaives for delivery, 82f; 50 Rio disposable, 78f; 108 Rio washed, 83f; 700 Ceylon triage, 127f. The arrivals were rather more than 4,500 sacks. This week, the business has been somewhat active: Rio, 73f 50c to 79f; ditto washed, 83f to 89f; Porto Cabello, 91f 50c. At *Nantes*, last week, there were no sales, and the importations were insignificant. No sales have taken place this week. At *Bordeaux*, last week, the Saint Jago mentioned in last week's Economist went, it is said, at 100f in bond; the damaged Java fetched from 125f 50c to 133f. This week there have been no sales. At *Marseilles*, last week, 400 sacks Brazil were sold at 73f to 75f.

Sugar.—The sales at *Havre*, in the week ending Friday, were only 215 hogsheads French West India at 62f the 50 kilogs duty paid; 30 ditto for delivery, 62f 50c; and 5,000 bales Reunion expected, 64f. Some damaged Havana was also sold. The arrivals were upwards of 500 hogsheads of French West India. This week, the sole sale recorded is a small lot of French West India "usine," at 63f. At *Nantes*, last week, some large sales of Reunion were made as mentioned in last week's

ECONOMIST, and, in addition, a small lot of French West India went at 61f 50c. The arrivals were 16,000 sacks Mauritius, and 19,000 Reunion. This week there have been no sales. At *Bordeaux*, last week, the large sales of Reunion noticed in last week's ECONOMIST were at 62f 50c to 63f 50c the 50 kilogs. Nothing was done in foreign sugar. This week there have been no transactions.

INDIGO.—At *Havre*, last week, the sales were confined to 14 cases Bengal at prices kept secret. This week, 14 cases Bengal have been sold, but the prices have been kept secret. At *Bordeaux*, last week, the sales were 2 cases Bengal, 7 Kurpah, and 4 Caracca. The prices given were those previously established. This week, 11 cases Kurpah and 9 Bengal have been sold, but, as usual, the prices are not given.

HIDES.—At *Havre*, in the week ending Friday, business was not important: 1,410 Buenos Ayres dry went part at 155f 50c to 158f the 50 kilogs duty paid; part at prices kept secret; and 954 horse hides of La Plata at 100f the 100 kilogs. The arrivals were about 50,000. The sole sale this week has been 307 Buenos Ayres dry, at 156f 25c.

WOOL.—At *Havre*, in the week ending Friday, 36 bales Buenos Ayres, unwashed, went at 1f 40c to 2f 35c the kilog in bond; 6 bales sheepskins La Plata, unwashed, 1f 50c; and 4 ditto, washed, 2f 65c. The arrivals were about 3.000 bales. No sales have been made this week.

TALLOW.—There were no sales at *Havre* in the week ending Friday, but 59 casks were received. Nothing has been done this week. At *Paris*, yesterday, the 100 kilogs were 136f 75c, a rise of 1f on last week's quotations.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 degs. was at 108f; Montpellier, of 86 degs., at 135f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 132f; beetroot, 107f. At *Orleans*, yesterday, 3-6 Montpellier was 140f; 3-6 Northern, 110f.

BRUSSELS, April 11.

It is believed here, in well informed quarters, that considerable progress has been made towards the conclusion of a treaty of commerce with France. This treaty will, among other things, reduce, it is said, the duty imposed in France on Belgian cast iron to 2f the 100 kilogs. It will also, it is stated, abolish in both countries the duties on the import of looking glasses. What it will do with regard to coal I have not heard, but I presume, on account of the treaty between France and England, will leave it untouched.

ST PETERSBURG, March 24.

The Government has resolved to encourage the establishment of Land Banks on the plan of those in Germany, and one will very shortly be started in this city, with a capital of 1,500,000 roubles (240,000*l*). The object of these banks will be to make advances to nobles for long periods at a moderate rate of interest, say between 4 and 5 per cent., to enable them to clear off the heavy mortgages and other obligations they are under, and to improve their estates. The wide field which there is for banks of this kind, may be judged from the fact that the mortgages on security of *serfs* alone, are calculated to amount, for all Russia, to very nearly 80,000,000*l* sterling.

COMMERCIAL AND MISCELLANEOUS NEWS.

Letters from Calcutta to the 10th ult. thus represent the state of trade:—Exports— A very moderate business has been done in produce, and we have little alteration to notice in our market since the despatch of the last mail. Holders are still asking higher prices than shippers can afford to give; the firmness shown by them is consequent on the moderate supplies of almost all principal staples. The prices of some articles have given way; but the rise on freights and exchange have more than counterbalanced the decline. Imports—The increased monetary pressure has continued to cause great interruption to business. There has been and still exists a desire by the dealers to operate, but the scarcity of money is keeping them back. The tightness of the money market has increased since the rise on the 1st instant of the Bank of Bengal rates on discounts and interests. The Money Market—The late heavy investment in the Five-and-a-Half per Cent. Loan, and the large deposits in the Government treasury by intending salt purchasers at the Government sale have been the cause of increased tightness in the money market. We understand that very high rates of interest—*i. e.*, 24 to 30 per cent.—have been paid by salt speculators for temporary loans in the market, and up-country Hoondeans have been discounted at 15 to 16 per cent. The Bank of Bengal, apprehensive of a run for accommodation, raised its rates on the 1st instant on discounts and interests on loans all round. Discount—On private bills and notes at or within three months, 11 per cent.; on promissory notes with one name protected by security of Government paper at or within 60 days, 9 per cent.; Treasury Bills No. 2, 8½ per cent.; Government acceptances, at or within three months, 8 per cent.; Mint certificates, 5 per cent.

We have advices from Jamaica to the 24th ult. The weather had been favourable throughout the island. Coffee had not been offering in any quantity, and purchases had been made at 42s to 44s, according to quality, the latter price being for grades suitable for tierces. Sugar ruled at 20s for fair, and 16s to 18s for dark. Sales of pimento had been made at 3d per lb for a lot of 1,000 bags at an outport, and 300 bags at Jamaica. The weather at Demerara had, generally speaking, been fine, although warm with occasional showers. The exports during the fortnight were:—Sugar, 1,092 hogsheads, 86 tierces, 382½ barrels, 620 bags; rum, 577 puncheons, 192 hogsheads, 90 barrels. From Trinidad advices are to the 24th of March. The weather during the fortnight had been favourable for sugar-making, and cocoa had come in more freely than during the two previous weeks. Of the former article considerable sales had been effected, principally good refining for the English market, at 4 dols, and casks 5 dols. Grocery qualities were being held for higher rates. The last sales of cocoa were 13 dols 50c per fanega (110 lbs). There were no sales of molasses to report. The following is a return of produce shipped to date:—To March 24, 1860, 2,972 hhds, 469 tierces, 488 barrels sugar; 431 puncheons 4 tierces molasses; 11 puncheons rum.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An ACCOUNT, pursuant to the Act 7th and 8th Victoria. cap. 32, for the week ending on Wednesday, the 11th day of April, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,389,340	Government Debt	11,015 100
		Other Securities	3 459,900
		Gold Coin and Bullion	13,914,340
		Silver Bullion	...
	28 389,340		28,389,340

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14.553,000	Government Securities (including Dead Weight Annuity)	9,726,943
Rest	3,200,497	Other Securities	23,534,388
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	5,878,135	Notes	4,922,085
		Gold and Silver Coin	722,762
Other Deposits	14,570,717		
Seven Day and other Bills	705,829		
	38,908,178		36,906,178

Dated the 12th April, 1860. W. MILLER, Deputy Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	24,173,084	Securities	33,185,331
Public Deposits	5,878,135	Coin and Bullion	14,637,102
Private Deposits	14,570,717		
	44,621,936		47,822,433

The balance of Assets above Liabilities being 3,200,497*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£1,627,498
A DECREASE of Public Deposits of	3,818,297
An INCREASE of Other Deposits of	604,369
A DECREASE of Government Securities of	492,197
A DECREASE of Other Securities of	1,430,376
A DECREASE of Bullion of	246,495
A DECREASE of Rest of	582,638
A DECREASE of Reserve of	1,868,160

This return shows the effect of the payment of the dividends. The changes, however, are of a very remarkable character, and deserve close attention. The money-dealers are evidently withdrawing their balances from the Bank and locking them up. Further explanations upon this point will be found below. The Bank's reserve is now drawn down to a low point; and confidence cannot be felt that the advance in their rate of discount to 5 per cent., which was decided upon yesterday, marks the limit to the upward movement.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
	£	£	£	£	£
Circulation, including bank post bills	21,199,538	20,469 332	21 317,325	22,685,308	24 173,084
Public deposits	4,914,388	5,116.350	2,989,489	5,026,939	5,878,135
Other deposits	10,969,389	10,481,057	16,915,987	15,981,833	14,570,717
Government securities	14,209,962	11,333,126	9,743,884	11,371,118	9,728,943
Other securities	9,744,702	18 984,640	16,408,494	16,938,400	23,534,388

Exchange on Paris (ebrt)	25 52½ 60	25 25 30	25 5 10	25 2½ 10	25 17½ 22½
— Amsterdam ditto	12 3½	11 16 17	11 15 15½	11 14½	11 14 15
— Hamburg (3months)	13 13	13 8½	13 6	13 5½	13 6 6¼

At the corresponding period of the year 1850, it was rumoured in Vienna that the state of siege would be removed on the 1st of May. Lord Palmerston had sent instructions to Admiral Parker that, in the event of the good offices of France proving ineffectual to obtain a settlement of Don Pacifico's claim on the Government of Greece, a rigorous blockade of the entire coast of Greece was to be established. In the House of Commons, Ministers had obtained a majority of only 3 against a motion by Lord Duncan for the repeal of the window tax.

In 1857, there was a partial subsidence of the pressure in the money market, but the payment of the April dividends had drawn the Bank reserve down to 3,787,567*l*, and the rate of discount was as high as 6½ per cent. The drain of gold to the Continent had slackened, the operations of the buyers for exportation being hampered by the stringency of the money market. The Bank of England had refused to make advances on Government securities at a less rate than 7 per cent., and had intimated their intention of limiting accommodation to the bill-brokers to a period of one month.

In 1858, there was great ease in the money market, and the payment of the April dividends had been attended with a decrease of only 339,744*l* in the Bank's reserve.

In 1859 an Indian Debenture Loan of 7,000,000*l* had been announced, and the official notification of the Russian Loan of 12,000,000*l* was expected immediately. The idea of a Congress of the European Powers was being ostensibly entertained by France, the Government not having yet completed their preparations for war.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 1,224,687*l*; in 1857, a deficiency of 8,503,583*l*; in 1858, an excess of 507,493*l*; and in 1859, a deficiency of 956,567*l*. In 1860, the deficiency is 8,963,671*l*.

The anticipation hinted in the last number of the ECONOMIST that, upon the payment of the dividends, the Bank Directors would feel that they have a freer action, and would raise the rate of discount to 5 per cent., was realised yesterday. The public were not at all taken by surprise by the step, for on Wednesday the demand upon the establishment was extremely heavy, and in all other quarters the rates were above those charged by it. The return above given shows that the Directors, having regard to the principles by which they are ordinarily guided, could not do otherwise than raise the rate. The struggle which is now going on in the money market excites general attention. There is no question whatever of any foreign drain of bullion, the exchanges with the Continent being more favourable than for a long time past; yet the hostilities waged between the Bank of England and the discount houses prove of sufficient importance to hamper trade seriously. The discount houses decline to give accommodation to any but their regular customers, as long as they are entirely excluded from making application to the Bank. They at the same time demand very high rates upon all but the choicest short paper. By the holders of four and six months bills—bills which are not discounted by the Bank of England—the inconvenience is especially felt. That the public interests are prejuced by the present position of affairs, is unquestionable. The discount firms have within the last few days carried the expression of their opposition to the point of refusing to lodge any longer in the Bank of England the large reserves which they have accumulated. The large increase in the circulation is a remarkable feature in face of the continued stringency of the market.

Yesterday the applications at the Discount Office at the Bank of England slackened materially, owing to the large draught made upon the establishment on Wednesday; but to-day the demand was again to a full average extent. In other quarters the demand to-day was active, and only the best short paper was taken at 5 per cent., the terms in most instances being 5½ and upwards.

In consequence of the alteration at the Bank, the discount establishments have announced a rise of ½ per cent. in the rates allowed for loans. They now give 4 per cent. for money "at call," and 4½ per cent., subject to seven days' notice of withdrawal. A similar movement has been notified by the joint stock banks, which now give for deposits 4 per cent., or 1 per cent. below the Bank minimum rate of discount. The London and Westminster Bank, however, allow only 3 per cent. on sums below 500*l*.

The rates of discount in the principal continental cities are as follows:—Paris, 3 per cent. (Bank, 3½); Berlin, 3½; Vienna, 5; Amsterdam, 3; Frankfort, 2 (Bank, 3); and Hamburg, 2 per cent.

An instalment of 8 per cent., making 34 per cent. paid, falls due on the Canadian Five per Cent. Loan of 2,800,000*l* on Tuesday next, the 17th.

The adjudication of the Victoria Government Six per Cent. Loan of 2,650 000*l* took place in due course at the London and Westminster Bank on Wednesday. The transaction, thus far, has been only partially successful. The minimum or reserved price fixed by the Committee of representatives of the six Australian banks was announced to be 105 per cent., as anticipated in the last number of the ECONOMIST. The total amount of tenders at and above this price was 1,572,000*l*. The whole of these were, of course,

accepted. The amount tendered for below the minimum and therefore rejected, was only 116,000*l*. The highest price bid was 108 (the Debentures being procurable in the market at 107), and the lowest 95. The balance remaining unallotted is 1,078,000*l*. Yesterday afternoon the Committee notified that they will receive tenders at the London and Westminster Bank, at two o'clock on Tuesday next, "at a price not below the minimum of 105*l* per cent., as fixed by the Australian Government." The conditions are, in other respects, the same as before, and the entire amount must be paid up at the date originally fixed, viz., the 30th inst. It is mentioned that "in cases of equality of tenders beyond the amount to be issued, they will be subject to a *pro ratâ* diminution." The purchasers will be "declared to be those who have offered the highest price not under the said minimum." The persons whose tenders were accepted on Wednesday having urged their reasonable claim to a preference in the new allotment, it has been virtually conceded to them, the Committee having intimated in a supplemental advertisement issued late this evening, that "in the event of the tenders at or above the minimum price exceeding 1,078,000*l*, a preference in the allotment, the rates being equal, will be given to those whose tenders were accepted on the 11th instant."

We have reason to believe that, should the second attempt to place the loan be only partially successful, the balance that may remain unsubscribed for will be held over by the Committee until next August.

A deposit of 5 per cent. having already been lodged, it follows that in the event of the whole loan being taken, a sum of no less than 2,650,000*l* must be paid on the 30th inst. This liability is rather a serious one, in the present state of the money market.

Last week the price of the Victoria Debentures was 107 to ½, and on Wednesday morning 106½ to 107. Yesterday morning, during the uncertainty respecting the mode in which the balance would be disposed of, a fall temporarily occurred to 104 to ¼. This afternoon the closing quotation was 105.

The arrivals of specie and bullion this week have been small, comprising a total of only about 107,000*l*. The Oneida has taken 63,000*l*, chiefly in sovereigns, for Brazil, and the Massilia 247,965*l*, nearly all silver, for Bombay. The demand for gold for exportation to the Continent is slack, and is not likely to revive, now that the money market has become so tight, and that the exchanges are advancing.

Under the stimulus of the rise in the value of money here, the Continental exchanges exhibit a further and almost general improvement. The rise is especially observable in the exchange on Paris.

Of the 768,000*l* in Australian gold, known to be on the way to England, 306,000*l* is now due by the Copenhagen, Suffolk, and Greyhound.

The bar silver by the Parana was disposed of to-day at 61⅞d per ounce, showing a fall of ⅛d from the price recently quoted.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley:—

Gold.—We have no arrivals from Australia to announce this week. The Vanderbilt and the Fulton, from New York, are reported; the former with 20,000*l*, and the latter with 200,000 dols, nearly all for France. The 48,000*l*, per West India steamer Parana, alluded to in our last circular, has been sold for the Continent. The Tasmanian, from the West Indies, reported this morning, brings 66,000*l* in gold and silver. Only 10,000*l* has been withdrawn from the Bank. The shipments comprise 60,000*l* in sovereigns, per Oneida, to the Brazils, 2,000*l* to Alexandria, and 26,000*l* to Bombay, per Bombay steamer of 12th instant. The Australian vessels now on the way are:—The Copenhagen, out 109 days, with 157,000*l*; Suffolk, out 94 days, with 129,000*l*; Monarch, out 80 days, with 116,000*l*; Greyhound, out 87 days, with 20,000*l*; Norwood, out 80 days, with 36,000*l*; Ocean Chief, out 80 days, with 128,000*l*; Montmorency, out 77 days, with 36,000*l*; Lightning, out 65 days, with 52,000*l*; Lincolnshire, out 65 days, with 87,000*l* (not 128,000*l* as reported); making a total of 761,000*l*.

Silver.—Our market continues depressed. The Bombay steamer of this day takes out 219,965*l*. The bar silver, per West India steamer Parana, has not yet been sold. We quote the price as being nominally 5s 1¾d per oz standard.

Mexican Dollars.—The dollars brought by the Parana have been sold at 5s 2⅛d per oz, being a decline of ½d per oz as compared with the price obtained in the early part of March. Prices have, however, in the interval varied from 5s 2⅛d to 5s 2¾d.

Exchange on Bombay and Calcutta for 60 days' sight Bank drafts is weak at 2s 0⅛d to 2s 0¼d, and will, no doubt, be affected by the price of bar silver, should that go lower. Madras, 2s nominal. Documented bills, 1s 11½d.

India Government Loan Notes are about the same as at the date of our last; they have been better, but have relapsed yesterday and to-day. The rise in the Bank rate this day to 5 per cent. will probably act adversely upon them, but this does not follow. We quote 5 per Cents. 97¾ to 98, and 5½ per Cents. 103½ to 104, with very little doing.

Quotations for Bullion.—Gold—Bar gold, 77s 9¼d per oz std; bar gold, fine, 78s per oz std; bar gold, refinable, 78s 1d per oz std; Spanish doubloons, 77s per oz; United States gold coin, 76s 3 d per oz, last price. Silver—Bar silver, 5s 1¾d per oz std, last price; bar silver, containing 5 grs of gold, 5s 2d per oz std, last price; fine cake silver, 5s 6¼d per oz, last price; Mexican dollars, 5s 2⅛d per oz; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11¾d to 4s 11⅞d per oz.

The scrip of the new Brazilian Loan remains dull, at ½ discount to par.

The monthly return of the Bank of France, extending to Thursday, the 12th inst., shows the following changes:—Coin and bullion—decrease, 360,000*l*; bills discounted—decrease, 380,000*l*; notes in circulation—increase, 1,280,000*l*; Government deposits—decrease, 2,120,000*l*; private deposits—decrease, 240,000*l*; advances on public securities—decrease, 80,000*l*. The increase in the circulation is explained by the heavy disbursements by the Treasury on account of dividend and other claims. The movement in the discounts indicates no revival of trade.

At Paris, to-day (Friday), the 3 per Cent. Rentes closed at 70.15 for money, and 70.20 for the end of the month, being 5c lower than yesterday, but ¼ per cent. higher than last week. The Bourse has become more reassured latterly upon the important subject of foreign relations, owing to the moderate professions of the French Government respecting the manner in which the "neutralised" districts of Savoy are to be dealt with.

The English funds during the greater part of the week have been rather flat, owing to the state of the money market and the rise in the Bank rate of discount. At the commencement of the monthly settlement just concluded, moreover, it seemed probable that the supply of stock would prove in excess of immediate requirements. Yesterday morning, accordingly, Consols declined to 94 to ⅛ for money, and 94¼ to ⅜ for the 9th of May. To-day the market was firmer, and the closing quotations were, respectively, 94¼ to ⅜, and 94⅜ to ½. After the close of the Stock Exchange, notwithstanding the report that the Bank return would be very unfavourable, some animation was shown, and Consols were quoted fully ⅛ per cent. above the prices given above. There have been some considerable withdrawals of stock at the conclusion of the settlement, so that Consols were rendered absolutely scarce for immediate transfer. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The market for British railway stocks continues remarkably firm, being strongly supported by the splendid traffic returns. The preparations for the fortnightly settlement, which commenced this day, indicate that the rise in the value of money has caused some amount of stock to be attracted into the market. Speculators for the rise were consequently obliged to pay higher rates for the privilege of carrying over their purchases until the next settlement. Notwithstanding the slight check thus given to the upward course of prices, to-day's closing quotations, compared with those of last week, show a rise of 1½ per cent. in Great Northern stock, 1¼ per cent. in Lancashire and Yorkshire, and York and North Midland, 1 per cent. in Berwick, ½ per cent. in London and North-Western, and ¼ per cent. in Caledonian, Great Western, and North British. On the other hand, there is a decline of 1 per cent. in Midland, ½ per cent. in London and South-Western, and ¼ per cent. in South-Eastern. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.15 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 1-10th per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 108⅞ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

The Commercial Times.

Reduction of Postage on Letters forwarded via Belgium to the Papal States and the Kingdom of the Two Sicilies.—In consequence of a reduction in the Italian postage upon letters forwarded via Belgium and Switzerland to the Papal States and the kingdom of the Two Sicilies, such letters will in future be liable only to the following combined British and foreign rates of postage, viz.:—Not exceeding ½ an ounce, the Papal States, 1s 2d; the Two Sicilies, 1s 4d. Above ½ an ounce, and not exceeding 1 ounce, the Papal States, 2s 4d; the Two Sicilies, 2s 8d. Above 1 ounce, and not exceeding 2 ounces, the Papal States, 4s 8d; the two Sicilies, 5s 4d. Every ounce after the first, the Papal States, 2s 4d; the two Sicilies, 2s 8d. This postage must in all cases be paid in advance.

Mails for Norway.—The steam-packet communication between Denmark and Norway having been re-established, the mails from the United Kingdom for Norway will be conveyed direct by sea from Denmark to Norway, instead of via Sweden, until further notice. The rate of postage to be taken on letters addressed to Norway will be 1s 4d the half-ounce, and so on, according to the scale in operation for charging inland letters. This rate comprises both the British and foreign postage on the letters to the place of their destination; and it may either be paid in advance, or the letters may be forwarded unpaid, at the option of the sender; except, however, in the case of registered letters, the postage upon which, as well as the registration fee, must be paid in advance.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

A very limited supply of English wheat was on offer at Mark lane this morning. For all kinds, owing to several purchases having been made for consumption in Ireland, there was a steady demand at an advance in the quotations realised on Monday of fully 1s per quarter. Foreign wheat, the show of which was only moderate, was in request at 1s per qr more money. Grinding barley was the turn dearer, and the value of all other kinds of produce was well supported. The imports from abroad have amounted to 4,060 qrs of wheat, 8,330 barley, 22,010 oats, and 220 sacks of flour. Advices from Alexandria to the 2nd inst., forwarded by Messrs Briggs and Co., state that prices of grain were very firm. Wheat was selling at from 37s to 38s 3d; beans, 28s 8d to 29s; Indian corn, 26s 9d to 27s 9d; and barley, 19s 6d to 20s 6d per quarter.

At Liverpool, to-day, wheat has further improved in value 1d per 70 lbs, and Indian corn has advanced 1s per 480 lbs.

The sales of the week in the Liverpool cotton market amount to 45,000 bales, including 37,500 bales to the trade, 1,000 bales on speculation, and 6,500 bales for export. There is no quotable change in prices, but it is difficult to effect sales at the last quotations, particularly in the lower descriptions, of which there is still so abundant a supply, that they are with difficulty supported. To-day the market closes quiet; sales 7,000 bales.

For all descriptions of tea we have again to report a very inactive demand; nevertheless, prices generally have continued firm. The show of samples has not increased.

IMPORT of TEA in London, from Jan. 1 to March 31, 1860, and the STOCK on hand on April 1, 1860, compared with the corresponding date in 1859.

The supply of tea afloat is now about 12,000,000 lbs, against 16,000,000 lbs at the corresponding period last year.

By the present mail we have received from Hong Kong the annexed report of the state of the tea and silk trade in China to the 28th February:—

Silk—No transactions; prices unchanged. Tea—Only one chop has arrived since our last, and settlements have been limited to four chops, one of which is for America. Total settlements to the 25th inst., 221 chops; stock, 21 chops. Very little more is expected from the country, and prices remain much as before. Scented Orange Pekoe—4,500 boxes sold at 17½ to 24 taels for common mixed leaf to fair medium, and 26 to 29 taels for fine. Scented Caper—3,500 boxes sold, common to medium quality at 15½ to 21 taels. Canton-packed Congou—3,000 half-chests at 16 to 22 taels. Gunpowder—400 boxes Canton made, at 21 taels. Foochow advices are to the 21st inst. During the past fortnight demand has continued, and holders, being very firm, have obtained an advance of 1½ tael on low ordinary to good common congou, and 2 to 2½ taels on better class tea. Oolongs are 1 tael higher also, and, looking to the reduced stocks,—viz., 25,000 chests congou and 400 half-chests oolong, together with the small quantity expected from the districts,—we do not anticipate any reduction in price. The quality of the stock on hand is mostly "low" and "good common to middling." The supply of oolongs has almost ceased. Sales have been 32,600 chests congou, at 10 to 24 taels; and 4,200 half-chests oolong, from 14 to 22 taels. A good deal of the above is for the Continent, Australia, and India. Arrivals have been only a very few small parcels. Shanghai advices are to the 18th inst. Silk—During the fortnight 2,000 bales have been settled at the high prices quoted in our last. Stock is small, and consists principally of medium and common Tsatlees. We quote:—

	taels		taels
No. 1 Tsatlee	...	No. 1 Taysaam	390
No. 2 Tsatlee	...	No. 2 Taysaam	370
No. 3 Tsatlee	425	No. 3 Taysaam	350
No. 4 Tsatlee	410	No. 4 Taysaam	335
Inferior Tsatlee	375 to 400	Inferior Taysaam	320 to 330

Throwns, 410 to 25 taels; long reals, 320 to 40 taels; skeins, 295 to 310 taels. Total export of silk from China to Europe is 50,857 bales, against 59,581 in 1859, or a decrease for this season of 8,724 bales. Tea—In black tea a good business has been transacted, and for blackish leaf kinds an advance of 1½ to 2 taels has been established. Holders remain very firm, stocks being small, and few arrivals expected. Of the finer kinds of greens, a decline of 2 taels has been submitted to but the scarcity of the inferior kinds has supported their value. Settlements have been 23,000 chests black and 26,000 half-chests green. The supplies received during the fortnight have been insignificant. Stock of black is estimated at 20,000 chests, and of green 55,000 half-chests. Total export from China to Great Britain is 61,096,600 lbs, against, the same time last year, 41,607,400 lbs, or an increase of 19,489,200 lbs for this season. To the United States the export is 25,782,000 lbs, against 23,238,400 lbs last year, or an increase for 1858-59 of 2,543,600 lbs.

The sugar market, generally, has been devoid of animation, although the stocks in dealers' hands continue very moderate. In prices no quotable change has taken place.

Common qualities of coffee have sold somewhat freely at full currencies; but other descriptions have moved off slowly, and, in some instances, the quotations have had a drooping tendency.

The annexed communication, dated the 15th ult., has been forwarded from Colombo, by Messrs A. W. Heale and Co.:—

Uninterrupted fine weather has enabled shippers of produce to effect considerable progress, and the shipments of coffee to date are as follows:—

PLANTATION COFFEE.

To Great Britain .....cwts	172,195	against last year, cwts		132,305
Foreign Ports	16,859	—	—	25,843
Australia and India.....	6,499	—	—	4,905
	195,553			163,053

NATIVE COFFEE.

To Great Britain.....cwts	57,706	against last year, cwts		26,731
Foreign Ports.....	47,033	—	—	93,433
Australia and India.....	2,035	—	—	9,913
	106,774			130,077

We hear of one or two operations in plantation coffee in parchment, at about previous quotations: the quantity still likely to change hands on the spot is extremely limited. Native coffee has been very sparingly on offer at about our last figures, and unless there be considerable parcels in the interior, awaiting a decline in the cost of transport, we must conclude that the crop of this quality is unusually small. Plantation coffee, low grown, 37s 5d; mountain, 52s 1d per cwt. Native coffee, well-picked and dried, 49s 10d per cwt.

There has been less animation in the rice market, and a few sales have taken place at a slight reduction in value. Apparently this article is likely to rule higher in price, owing to the steady upward movement in the wheat trade.

No change has taken place in the value of any kind of wool. Dealers, generally, have operated with extreme caution, and the transactions on continental account have continued limited.

Silk has continued to move off slowly. The fluctuations in prices, however, have been trifling. "We have to report a month of heavy dragging business in silk," observe Messrs Durant and Co., "manufacturers finding no satisfactory vent for their goods. In China silk the arrivals have been very large, and the stock shows an increase notwithstanding the large deliveries. Prices upon the whole are fairly supported—high cost in China, and the continued belief in short shipments, inducing importers generally to abstain from pressing sales. Chinese thrown silk continues utterly neglected. Japan silk, of the finer sizes, continues to find eager buyers at full rates, but the coarser sizes do not meet with equal favour. In Bengal silk we have no particular feature. In this class also the finest sizes and best qualities of the November bund, now arriving, have been in demand, but the prices offered have not been sufficiently satisfactory to induce business: medium and common qualities of previous importations have shared the general dulness. In Italian, Brutia, and Persian silk, nothing."

M. Arles Dufour, of Lyons, thus writes in reference to the silk trade:—

Besides the political apprehensions, our silk transactions have been affected seriously, for the last two months, by the bad result of the spring trade in the United States, and by the long winter, which interfeers with the sales on the Continent. However, the extraordinary scarcity of European, and the limited stock of Asiatic silk, have prevented a serious decline. As regards the silk crop, should the cold weather last, the hatching will begin two to three weeks after the normal period, and the result again be exposed to the danger of the great heat. It is, however, important to state that seed is very abundant, and that the low prices will permit growers to make full supplies.

DELIVERIES of SILK through the LYONS CONDITION HOUSE.

	bales.	kilogs.
From February 1 to 28, 1859	2,865	223,000
From February 1 to 29, 1860	2,345	186,800
From March 1 to 31, 1859	3,200	249,000
From March 1 to 31, 1860	2,710	192,000

The state of the indigo market at Calcutta to the 10th of March is thus reported by Messrs Moran and Co.:—

The improved accounts of the English market caused a good demand for the indigo remaining unsold at the date of our last, and all desirable descriptions have consequently gone off with spirit at the equivalent of the October sales to 4d per pound higher. Exports of indigo from the 1st November, 1859, to the evening of the 6th March, 1860:—To Great Britain, 16,768; Havre and Bordeaux, 4,835; foreign Europe, 43; America, 1,098; Gulf, &c., 1,671; sundry ports, 2;—total, 24,417 chests.

The rum market has been very quiet, at about previous quotations. Brandy has been held on firmer terms; but the inquiry for it has been somewhat restricted.

Hemp has maintained last week's prices; but the business done in it has not been extensive. In flax and jute, very little has been passing.

Scotch pig iron has moved off slowly, and the quotations have declined to 54s 3d to 54s 6d cash mixed numbers. English copper has advanced 2*l* 10s per ton. In the value of other metals, very little change has taken place.

Oils have mostly sold at about previous rates. Linseed qualities have realised 27*l* 15s to 28*l* per ton Spirits of turpentine, 35s to 36s 6d per cwt.

Very little business has been transacted in the tallow market. P. Y. C., on the spot, has sold at 56s, and for delivery during the last three months, 51s 6d to 51s 9d per cwt.

The cotton market was languid in the early part of the past week, and the lower qualities of American remain much depressed; in the last two days, however, there has been a more active demand for the qualities above low middling, and a slightly firmer price has been obtained. We have to reduce our quotations for the ordinary grades $\frac{1}{16}$d per lb. Egyptian are difficult of sale, but without further decline. Brazil are steady at last week's prices. East India still droop in sympathy with low American. The sales to-day are 7,000 bales. The market is quiet. The reported export amounts to 6,500 bales, consisting of 3,620 American, and 2,880 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The demand for goods for shipment, both to India and China, has somewhat improved this week; but the amount of business done has not been to say extensive. For the Continent, the inquiry has been restricted; but the transactions for home use have been rather large. The iron trade has become more healthy, but without leading to any important change in value. Coals have sold freely on former terms.

MANCHESTER, April 12.—This market has been rather irregular and weaker, a dull tone prevailing generally. The chief exception occurred on Tuesday afternoon, when favourable advices were received from India and China, and a considerable business done at little under recent prices; but the difficulty of discounting long-dated paper has proved a restriction on this class of transactions, and there has been less done since. Buyers now appear more disposed to wait for further concessions, whilst sellers continue in part resting on unfulfilled engagements. Easter holidays have interfered with the production of the mills, and also with the home trade.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

LEEDS.—The warehouses are not doing any great trade at present, but this is almost to be expected at the present season of the year. The shipping houses are beginning to do a more extensive business. Flax trade continues good, there being a steady demand for several classes of yarn, but they change hands at a very slight margin of profit.——HUDDERSFIELD.—The demand for woollen and Bedford cords continues brisk. The inquiry for steel mixture doeskins for rifle corps purposes has fallen off considerably. The fancy coating trade, although good, is not so brisk as usual this season. Prices in every department continue firm, in some cases a slight advance being obtained. The local wool trade has been busy, a large number of small parcels having been selected by manufacturers.——HALIFAX.—The state of the wool market is not more promising than it has been for some time past. Manufacturers generally continue busy, but the spinners are getting nearly worked up, and there is more anxiety about the receipt of new orders.——ROCHDALE.—Wool—Business is quiet on the whole; few purchases have been made, except for immediate wants. Flannel—The transactions have been limited. There is a good trade in dometts, principally for shipping.——BRADFORD.—Wool—The business of the past week has been very limited. Buyers are by no means eager to operate at present prices, or the staplers pressing to sell below the rates that are current. Yarns—There is no change in the yarn trade worthy of notice. The shippers are not urgent to buy, and the home consumption keeps steady. In prices no alteration. Pieces—About an average amount of business is doing in goods with the home merchants, but the foreign houses are doing but a limited trade.——LEICESTER.—The hosiery trade is quiet this week, the severity of the weather and the Easter holidays having operated against business. The demand for cotton goods has been checked. Wools continue firm, and high figures are yet obtained for superior sorts. Yarns are without much alteration.——NOTTINGHAM.—There has not been much doing in the lace trade. In silk lace there is no material change to report. Stocks of most kinds of goods are light, and manufacturers are making as little as possible while trade continues in so languid a state. The hosiery trade has been quiet. There is no material change in the price of yarns.——DUNDEE.—The tone of the market generally is steady, and prices rule firm.——BELFAST.—No change has taken place in the value of any article. The trade, however, is firm.——WOLVERHAMPTON.—The quarterly meetings of the ironmasters have been held. The leading firms are reported to have orders enough to keep their works going; but these are the exceptional cases, as there can be no doubt that the second-class makers are badly off for orders. Prices, however, have not given way.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, March 28.—FLOUR AND MEAL.—A moderate business has been done in State and Western flour, and nearly all grades have further depreciated 5c to 10c per bbl, the demand being exceedingly light at the reduction. Canada flour has been in limited request, and prices have declined 15c to 25c per bbl, at which there have been sales of 1,100 bbls, closing heavily at 5.35 dols to 7 dols per bbl, as to quality. The market for Southern flour sympathises with that of other kinds, only a limited demand having prevailed during the three days, and transactions accordingly on a moderate scale, embracing 7,000 bbls. Export of wheat flour from 1st to 27th March, 53,157 bbls, against 49,150 bbls in 1859.

GRAIN.—The inactivity previously mentioned continues to be the most prominent feature in the wheat market, and the small sales which have transpired since Friday last have shown a further depreciation of 1c to 2c per bushel on Milwaukee Club and Chicago spring, to which transactions have been mostly confined. The inquiry has been almost wholly from the local millers, who operate as sparingly as possible, in view of the current quotations, which are somewhat above their views. The market for corn has been somewhat irregular, and prices have fluctuated considerably, having declined 2c to 3c. Export from 1st to 27th March: wheat, 14,106 bushels, against 600 bushels in 1859; corn, 35,411 bushels, against 19,276 bushels in 1859.

NEW YORK, March 31.—Flour—There was more inquiry for common and medium grades of State and Western brands, with rather a better feeling in prices. The higher grades were unchanged. The sales embraced about 7,000 to 8,000 bbls. Wheat—The market exhibited more spirit, with more inquiry from the trade. Corn was in good request and at firmer prices.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Nearly the whole of the leading markets held since we last wrote have been but moderately supplied with home-grown wheat. For most kinds there has been a steady, but far from active, inquiry, at full quotations, and at which good clearances have been effected. Foreign wheat,—the imports of which still continue very limited,—has commanded extreme prices; nevertheless, millers generally have purchased with extreme caution. The barley trade has continued in a healthy state, on former terms; but malt has met a dull inquiry at late rates. Oats have commanded more attention, and, in some instances, the currencies have had an upward tendency. Beans and peas have ruled somewhat heavy; but the value of all kinds of flour has been well supported.

The following return shows the imports of grain, &c., into London in the first quarter of the years 1858, 1859, and 1860:—

	1st Qtr. 1858.	1st Qtr. 1859.	1st Qtr. 1860.

Throughout the Continent, wheat has changed hands to a fair extent on English account, at very full prices; and there has been a steady business doing in other kinds of produce on former terms. In the United States no important movement has taken place in the value of either grain or flour. The Scotch markets, generally, have ruled firm, and the supplies of grain on offer have not increased. In Ireland, produce has commanded previous currencies; but the transactions have not increased to any extent.

A very limited supply of English wheat was on sale here, to-day, and the whole of it was cleared off at fully 1s per quarter above Monday's currency. Foreign wheat ruled firm, at 1s advance. Barley, too, was the turn dearer. All other kinds of produce changed hands freely, at extreme rates.

Mr Ed. Rainford states that 20 vessels laden with grain have arrived off coast since the 3rd inst. Floating cargoes have sold freely, at very full prices.

The London averages announced this day were:—

	qrs	s	d
Wheat	2763 at	50	4
Barley	747	35	11
Oats	930	25	9
Rye	...	...

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—At the opening of the market on Wednesday there was no material improvement in the demand, and the sales passed off quietly at former quotations. By private contract the operations have been very moderate, but some floating cargoes of Havana sold for the United Kingdom upon former terms. Only 1,010 casks West India had been disposed of up to yesterday (Thursday), including grainy Berbice at 38s 6d to 43s 6d per cwt. The week's delivery was only 2,740 tons, this falling off being accounted for by the approach of Easter. There were 6,400 tons landed, and the stock now exceeds last year's by 13,300 tons

Mauritius.—About 8,500 bags have changed hands by auction and in the public sales, the latest quotations being as follows: crystalised, 43s to 47s; grainy brown to yellow, 40s to 43s 6d; grey and yellow, 38s to 42s; soft brown, 33s to 37s 6d per cwt.

Bengal.—Nothing of importance has transpired by private contract.

Madras.—850 bags brown and yellow native realised 32s 6d to 35s 6d. Privately, business has been done in low Jaggery at 30s 6d per cwt.

Foreign.—433 barrels 200 bags Porto Rico were principally sold at full prices: brown to fine grocery, 40s to 46s 6d. Three floating cargoes of Havana, Nos. 11 to 12, have sold for the United Kingdom at 28s 6d 29s; and a cargo of Paraiba at 23s 6d. On the spot, 3,800 bags low dark brown Manilla are reported at 31s 9d per cwt.

Refined.—The market has not experienced any material change this week, and the transactions have been moderate in extent. Common to middling dry goods are quoted 51s to 52s per cwt.

MOLASSES.—100 puns West India have sold at higher prices. St Kitts and Antigua, 17s 6d to 18s 6d per cwt.

COFFEE.—There is less animation in the market, still prices remain steady. 280 casks 62 barrels and bags plantation Ceylon, by auction, sold at 70s to 77s 6d for low middling small berry to good middling. Some few contracts have been made in native by private contract. 280 bags bold pale Malabar brought 66s to 66s 6d. A floating cargo of good firsts Rio has sold for a near port at 60s. The stock at this port is 5,300 tons, against 5,420 last year, 7,500 in 1858, and 5,600 tons in 1857 at the same date.

COCOA.—A considerable quantity of Bahia has changed hands by private contract at 52s to 52s 6d per cwt.

TEA.—Sales have been rather pressed, which resulted in a large quantity of congou changing hands at easier rates. Subsequently some portion of the quantity resold at a profit, and the market is now more steady, owing to the China news received by telegrsm. The deliveries of tea in London for home consumption here have been in three months 11,214,000 lbs, against 11,055,000 lbs. The stock is 57,086,000 lbs (exclusive of several cargoes just arrived), against 62,645,000 lbs last year. In the United Kingdom it is 70,000,000 lbs and 68,000,000 lbs respectively.

RUM has been inactive. The stock is 26,605 puns 6,000 hhds, against 22,000 puns 5,340 hhds last year.

RICE.—The demand has fallen off materially since last Thursday, yet the late advance is fully maintained, with moderate transactions by private contract. Soft grain descriptions, 8s 9d to 9s 10½d; white Bengal, 12s to 12s 6d; pinky Madras, 10s 3d. 3,630 bags middling white Java in public sale were held at 13s. 1,500 bags old Moulmein at 8s 9d per cwt.

IMPORTS and DELIVERIES of RICE to April 7, with STOCK on hand.

	1860.	1859.	1858.	1857.

SAGO.—2,100 boxes have changed hands at 17s to 18s 6d per cwt for small grain, good to fine.

SPICES.—3,515 bags Zanzibar cloves sold at 3⅝d to 3¾d, being ⅛d per lb decline. 2,000 bags 1,600 robins Alleppy black, and 547 bags Singapore white pepper were withdrawn, as the buyers would not operate without the interest being allowed as on other spices paid for before the prompt. Singapore black pepper has sold upon easier terms privately, chiefly at 4d cash. 108 cases brown nutmegs sold at full prices, from 1s 4d to 2s 10d for low to good. 28 cases mace, low and slight mouldy to fair, 1s to 1s 6d. 101 bags pimento were taken in at 3⅞d per lb. The private transactions have been devoid of importance.

SALTPETRE.—A limited business has been done in Bengal on the spot. 200 bags, refraction 5 per cent., sold at 43s 9d. Partial inquiries exist for floating parcels, and 44s per cwt has been paid, with the usual allowances. 1,000 bags, now landing, realised the same price.

COCHINEAL.—The market remains quiet, and there is still a good supply of Honduras. 180 bags were chiefly bought in at the sales on Wednesday, some few lots being sold: silvers, 3s 3d to 3s 11d; middling black, 4s 3d per lb.

IMPORTS and DELIVERIES of SALTPETRE to April 7, with STOCK on hand.

	1860.	1859.	1858.	1857.

Stock	3700	3410	5020	3150

Delivered last week 317 tons.

LAC DYE.—There is no revival of the inquiry for this article. 90 chests about half sold at 11½d per lb for the mark G J & C.

OTHER DYESTUFFS.—Small sales are making in Gambier and Cutch at last week's prices. 55 bales Bengal safflower, by auction, were partly disposed of: middling to fair, 7*l* 6s to 8*l* 17s 6d per cwt, being about the previous value. Other articles are quiet.

DRUGS.—There was no change of interest at the public sales yesterday. Some Alleppy cardemoms sold at 3s 9d to 4s 9d per lb. Castor oil obtained the former value.

METALS.—The market has shown several changes of a different character this week, but the general tone of trade is quiet. According to the expectations formed in some quarters, the price of British copper has recovered half the late decline: sheets are now fixed at 1s 0½d; cake, 110*l*; being ¼d per lb and 2*l* 10s per ton dearer. Tin remains exceedingly dull, and prices nominal: Straits, 130s to 131s per cwt. Scotch pig iron, which again receded in value during the weeks, was further unsettled by the advance on the Bank rate yesterday. The quotation this morning is 54s 3d per ton. Spelter attracts more attention. Business has been done at 20*l* 12s 6d to 20*l* 15s per ton. Yesterday there appeared to be further buyers at previous quotations.

HEMP and JUTE have been quiet. No public sales of the latter have occurred, nor is there any improvement in the demand by private contract.

OILS.—No change has occurred in most kinds of fish. Sperms remain steady at 100*l* per tun, but there is little business doing. Olive quiet. Linseed in good demand for export at 28s on the spot. Rape is dull. A little better inquiry prevails for palm: fine, 46s to 46s 6d. Cocoanut also finds more ready buyers for consumption: Ceylon, 42s to 42s 6d; Cochin, 44s to 45s per cwt.

TURPENTINE.—The last sale of rough was at 9s 1½d. Spirits are in steady demand: American, 36s to 36s 6d per cwt.

LINSEED.—Arrivals from the East Indies have been very large, and the demand is moderate at 49s to 52s 3d. Calcutta to arrive, 48s to 49s per quarter.

TALLOW.—The market was again lower at one period during the present week, but has since become more steady, and the quotations on the spot, as well as for early deliveries, show about 6d recovery: viz., 1st sort Petersburg Y.C., 56s 6d to 56s 9d; April to June, 55s 3d to 55s 6d. The price for the last three months is 51s 6d to 51s 9d per cwt.

PARTICULARS OF TALLOW.—Monday, April 9.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The sales to-day comprised 13,735 bags Mauritius, 172 bags Bengal, 2,909 bags Penang, the bulk of which sold, prices in many cases ruling 6d per cwt cheaper. A small cargo of Havana, No. 11½, sold at 28s 6d for Bristol. The week's business in West India is 1,555 casks.

COFFEE.—295 casks and 146 barrels and bags plantation sold at 1s to 1s 6d decline. 1,480 bags native, ordinary to good, realised 60s to 62s 6d. A small parcel of Mocha was held at 130s per cwt for long berry.

COCOA.—214 bags Guayaquil were bought in at 75s per cwt.

RICE.—9,000 bags Moulmein were bought in at 9s 9d. Privately 6,000 bags Rangoon sold at 9s 6d.

SALTPETRE.—4,200 bags Bengal about half sold; refraction 13 to 5¾, 39s 6d to 43s 6d per cwt.

COCHINEAL.—220 bags Honduras chiefly sold at steady rates for good silvers. 109 bags Teneriffe and 66 bags Mexican were chiefly bought in.

SAFFLOWER.—114 bales Bengal were chiefly bought in.

OILS.—443 casks palm by auction part sold at 43s to 46s. 376 packages cocoanut part sold at 44s 6d for Cochin. 249 packages Ceylon brought 42s 3d to 42s 6d per cwt.

TALLOW firm. No change was made in the price of town to-day.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar opened firmer, with a slight advance on low grocery lumps and titlers, which has scarcely been maintained. Nothing doing for export. Some few sales have been made here in Dutch crushed f.o.b. in Holland—viz., 75 tons of V. O., at 32s 6d tierces, and 33s 9d in barrels; also 50 tons S. & T. No. 1, at 32s 6d, all barrels. The demand is very limited.

GREEN FRUIT.—Demand improved, in consequence of the Easter holidays. Several cargoes oranges from St Michael's, Terceira, and Valencia, sold by Keeling and Hunt at public sale, were taken freely by the trade, at prices in character with the condition and quality. More inquiry for lemons and nuts. A parcel of new Brazil are in the market; part sold at 45s per barrel. Palermo and Messina sours maintain their value, in consequence of the scarcity of Sevilles.

DRY FRUIT.—Market transactions are very small. The clearances, which continue on a large scale, consist chiefly of parcels bought before the reduction of duty, and held in bond till required. The market for currants is firmly held, and during the last few days may be said, if anything, to be tending in favour of sellers. Raisins, both red Smyrna and

Valencias, are neglected, though the former are inquired for by exporters. Figs neglected.

COLONIAL AND FOREIGN WOOL.—The market is without change.

HEMP.—Market a little quieter this week, and the demand not so active.

COTTON.—Sales of cotton wool from Friday, 6th April, to Thursday, 12th, inclusive:—400 bales Surat at 4d to 4¾d for middling to fully fair; 250 bales Madras at 5¼d to 5½d for fully fair to good fair Tinnivelly. Last week there were no reported transactions. This week the business has been small, and prices of the lower qualities are rather easier. Good fair and good being scarce, continue unchanged. There is a very limited demand for Tinnivelly, and prices are irregular, and in some cases rather lower.

TOBACCO.—There has been less activity in the market, and purchases have in most cases been limited to selections and small lots for immediate consumption. Fine export qualities of Virginia and Kentucky are becoming scarce.

LEATHER AND HIDES.—In the absence of any leather market at Leadenhall this (Easter) week, there is nothing new to report. The transactions that have taken place have been at the quotations of last week. At the public sales of raw goods last week, the 686 B. A. salted cow hides were withdrawn at 8d. The few Australian light hides were also bought in. Of the Turkey hides, only 108, 59⅜ lbs were sold at 6d. The dry B. A. kips brought 11d, the Mogadore 5½d to 9¼d. The salted River Plate horse hides sold at 12s 7d to 13s 6d, the dry at 9s 6d to 9s 7d for firsts, 7s 6d to 8s 1d for seconds and wet. East India kips were in limited request, very little demand existing for exportation. 80,000 of the 138,000 found buyers. The best hrined realised previous rates, but other descriptions were ¼d to ½d lower. Of the 3,177 buffaloes, 838 Singapore and 904 Calcutta were sold at former quotations. The Mimosa bark, about 4 tons, brought 11*l* 7s 6d in bags. The following sales have been made by private contract since the commencement of the month:—200 salted Rio Grande hides, 60¼ lbs at 8¼d; 100 B. A. horse, 34⅜ lbs at 13s 6d; and 200 B. A. ox (from second hands), 48 lbs, at 8¼d.

METALS.—There is little to remark in metals. Copper advanced on the 10th instant ¼d per lb, and has since been in good demand. The market for foreign copper is firm, notwithstanding some arrivals. Iron is very flat, and manufactured is easier to buy, although at the iron-masters' quarterly meeting no actual change was announced. Scotch pig has lost again the slight improvement noticed last week. Tin is heavy at quotations, but holders are pretty firm in prices. Lead is lower in price, which has brought in buyers again. Spelter is quoted higher, and a little business has been done at improved rates. Tin plates are dull of sale.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	56	6
Fat by ditto	2	1½
Yellow Russian	58	0
Melted stuff	41	0
Rough ditto	24	0
Greaves	16	0
Good dregs	7	0

Imports this week 272 casks.

PROVISIONS.

Bacon market exceedingly quiet this week; we have heard of 65s 6d being made, but it was an extreme price; very little doing. The butter market has a more healthy tone; a very good business done during the whole of this week. Quality of Friesland much improved, as well as a larger increase of make.

METROPOLITAN CATTLE MARKET.

THURSDAY, April 12.—Our market to-day was scantily supplied with beasts. Prime Scots and crosses sold steadily at full quotations; otherwise, the beef trade was in a sluggish state on former terms. We were fairly supplied with sheep, and all kinds were in request, at very full prices—the best Downs having sold at 5s 10d per 8 lbs. Lambs, the show of which was moderate, changed hands freely, at from 6s to 7s 8d per 8 lbs. There was a steady inquiry for calves, at prices quite equal to Monday.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	6	5	10

Lambs, 5s 6d to 6s 6d.

HOP MARKET.

BOROUGH, Monday, April 9.—There has been no alteration since our last report, the trade continuing dull, and prices somewhat unsteady. Our currency is as follows:—Mid and East Kents, 80s, 105s, 140s; Weald of Kents, 62s, 75s, 82s; Sussex, 60s, 75s, 76s.

FRIDAY, April 13.—There is an improved demand for the best sorts, and Mid and East Kents, as well as fine Wealds. Kents, and Sussex. Currency:—Mid and East Kents, 70s to 100s to 140s; Weald Kents, 65s to 75s to 84s; Sussex, 60s to 70s to 80s.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, April 9.—During the past week the arrivals coastwise have been fair. The trade still continues dull. The following are this day's quotations:—York Regents, 90s to 150s; Lincolnshire ditto, 80s to 105s; Dunbar ditto, 100s to 120s; Perth, Forfar, and Fifeshire ditto, 80s to 100s; ditto Rocks and reds, 75s to 85s; Irish Rocks, 70s to 80s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, April 12.—The arrivals of home produce continue moderate at this market, coastwise and by railroad. Trade generally is still tolerably active, at fully previous quotations. York Regents, from 160s to 180s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto Cups, 90s to 100s; Dunbars, 100s to 105s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* 0s to 5*l* 10s; and straw, 1*l* 8s to 1*l* 16s per load. A fair demand.

CUMBERLAND.—Meadow hay, 3*l* 0s to 4*l* 15s; clover, 4*l* 0s to 5*l* 10s; and straw, 1*l* 10s to 1*l* 16s per load. Trade steady.

WHITECHAPEL.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* 0s to 5*l* 12s; and straw, 1*l* 9s to 1*l* 16s per load. Supply good, and trade firm.

COAL MARKET.

WEDNESDAY, April 11.—Byass's Bebside West Hartley 15s 9d—Chilton Hartley Steam 15s—Davison's West Hartley 15s 9d—Hastings' Hartley 15s 9d—Holywell 15s 9d—Howard's West Hartley 15s 9d—Lambert's West Hartley 15s 6d—St Cuthbert's Hartley 15s—Tanfield Moor 12s 6d—Tanfield Moor Bute's 12s 6d—Walker Primrose 13s—Wylam 16s. Wall's-end:—Acorn Close 18s 9d—Eden 18s 9d—Gibson 17s 6d—Gosforth 18s—Hilda 17s 6d—Riddell 18s—Bell 18s—Braddyll's Hetton 19s—Brandon 18s 6d—Haswell 20s—Hetton 20s—Hetton Lyons 18s—Kepier Grange 19s—Pensher 17s 6d—Russell's Hetton 19s—South Hetton 20s—Stewart's 20s—Whitwell 17s 9d—Heugh Hall 18s 9d—Kelloe 19s 3d—North Hartlepool 15s 3d—South Hartlepool 19s—Thornley 17s—Trimdon Thornley 17s 3d—Thorpe 19s 3d—Whitworth 15s—Auckland Park 18s—Carway and Duffryn Malting 23s. Ships at market, 108; sold, 94.

FRIDAY, April 13.—Best coals, 20s 3d, 20s, and 19s 9d; seconds, 17s to 18s; Hartley's and Manufacturers, 12s 6d to 15s 6d. Ships at sea, 40s.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 13.—Our market has been rather quiet this week, buyers deferring their purchases until the public sales that are advertised to take place here from the 18th to 27th inst., when both fine colonial and East India and other low wools are to be brought forward.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 13.—Grain market numerously attended. Good business in wheat at further advance of 1d. Flour in fair demand, at full rates. Indian corn in active demand, at 1s advance since Tuesday. Galatz, 36s to 39s; Ibraila, 35s to 36s; Egyptian, 35s. Oats and oatmeal dull of sale.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 13.—There has been much inactivity in the market for manufactured iron throughout the past week, but there is little or no change to report in prices. Some transactions in Scotch pig iron have taken place during the week, at about previous quotations. Since the last reduction in copper, there have been sufficient orders given out to induce smelters again to advance the price this week, ¼d per lb on manufactured, and 2*l* 10s per ton on unmanufactured copper. For lead there has been little inquiry. In spelter there has been more doing. Tin plates quiet.

The Gazette.

TUESDAY, April 10.

BANKRUPTS.

F. J. Fowles and H. Hunter, Hatcham, Surrey, and Rood lane, oil merchants.
G. Oldfield, R. Oldfield, and J. Clarke, Lichfield, millers.
E. Aydon and T. W. Ferguson, Newcastle-upon-Tyne, grocers.

SCOTCH SEQUESTRATIONS.

J. Napier, Stirling, coal agent.
R. Dempster, Forres, Elginshire, surgeon.

GAZETTE OF LAST NIGHT.

BANKRUPTS.

W. E. Prichard, Blackman street, Borough, licensed victualler.
J. Ashby, Carlisle street, Soho square, builder.
H. Pyke, Edgware road, tailor.
N. M. Grose, Wadebridge, Cornwall, wine and spirit merchant.
J. B. Booth, Elland, Yorkshire, draper.
J. E. Morris, Bristol, grocer.
T. Innocent, late of Bedford street, Covent garden, wholesale and retail grocer and tea dealer.
H. Turner, Rotherhithe wall, grocer.
J. Williams, Tipton, Staffordshire, chemist, printer and bookseller.
C. F. Boyce, late of Epsom, Surrey, livery stable keeper, but now of Melton Mowbray, Leicestershire, innkeeper.

EPITOME OF RAILWAY NEWS.

TRAFFIC RECEIPTS.—The traffic returns of railways in the United Kingdom for the week ending March 31 amounted to 474,460*l*, and for the corresponding week of 1859 to 434,650*l*, showing an increase of 39,810*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 201,182*l*, and for the corresponding week of last year to 184,649*l*, showing an increase of 16,533*l*.

GREAT SOUTHERN OF INDIA.—The report of the directors of this company states that during the last 12 months they have been actively engaged in forwarding the works, and so much progress has been made as to induce an expectation that the first section of the railway from Negapatam to Trichinopoly may be opened in the spring of next year. The directors have already forwarded the permanent-way materials for 50 miles of line, as well as a considerable portion of the materials for the rolling stock. They have contracted for the remainder on favourable terms, and shipped four locomotive engines. They anticipate, therefore, that the whole of the materials required for the construction and equipment of the railway will have arrived in India by the end of the present year.

GRAND TRUNK OF CANADA.—The statement of the accounts of this company for the half-year ending the 31st of December last, shows that 11,242,368*l* had been received on capital account, including 2,711,122*l* received on shares consolidated into stock, 31,237*l* on shares not yet consolidated, 3,388,509*l* on debenture capital, 2,000,000*l* on preference debenture capital, and 3,111,500*l* on provincial debentures, leaving a balance against the company of 220,478*l*, in consequence of the total expenditure being 11,462,846*l*. The expenditure on rolling stock amounted to 834,260*l*, on the Victoria Bridge to 1,281,350*l*, and on works in progress to 678,908*l*. The revenue account for the half-year ending the 31st of December last, showed that 282,939*l* had been received, including 115,628*l* for passengers, 9,572*l* for mails, 152,964*l* for merchandise, and 2,334*l* for expresses. The total expenses amounted to 230,449*l*, leaving a balance of 52,490*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, April 9.—The railway market showed undiminished buoyancy, and most of the leading British stocks closed at an advance averaging about ¼ per cent. Indian guaranteed descriptions were firm. The only change of importance in foreign shares was a decline in Pernambuco to 1⅞ to 1⅞ dis.; Bahia closed ⅛ dis. to par; San Paulo, ⅜ to ½ dis.; and Lombardo-Venetian, 1¼ to ⅜ pm. American railway bonds and shares generally advanced, especially those of the Michigan Southern, New York Central, New York and Erie, and Pennsylvania Central lines. The transactions in mines were unimportant, but in one or two cases there was rather a stronger tendency. City Bank shares continued to improve.

TUESDAY, April 10.—The railway market continued to show great firmness, and experienced to-day another advance. London and North-Western, Lancashire and Yorkshire, North-Eastern, North British, and Great Northern (ordinary) stocks improved ¼ to 1¼ per cent.; Caledonian, ⅜; and other descriptions, ⅛ to ⅜. Great Northern A stock and Midland were, however, exceptionally a shade lower. The general business was not large, but the tone of the market good throughout. In the colonial market, Grand Trunk and Great Western of Canada declined, the former to 34½ to 35. Indian guaranteed continued steady, and after regular hours the original East Indian stock advanced to 102 to ½. Foreign shares were in rather better demand, and Pernambuco and Great Luxembourg showed a fractional rise. No change of importance occurred in American securities or mines.

WEDNESDAY, April 11.—The railway market opened favourably, but a general decline took place, the movement being stimulated by the late rise. All the leading British stocks closed on an average 1 per cent. lower, the principal fall being in Midland, Lancashire and Yorkshire, South-Eastern, and Great Northern. Indian guaranteed stocks were tolerably steady. In the foreign market, Great Luxembourg improved, while Pernambuco declined to 1½ to 1¼ dis., and San Paulo closed without change at ⅜ to ½ dis. The shares of the Illinois Central, New York Central, and New York and Erie showed an advance. Nova Scotia Government bonds were quoted ¼ per cent. lower. Late in the afternoon a decline also occurred in the last issue of the Victoria debentures, the final quotation being 105½ to ¾ ex div. Mines were dull and occasionally lower. No change of importance took place in joint stock bank or miscellaneous shares.

THURSDAY, April 12.—The railway market opened flatly, but, after the announcement of the raising of the Bank rate, improved on purchases to close speculative accounts for a fall. The recovery, however, was only about ⅛ to ¼ per cent., and was chiefly among the heavier stocks. Indian guaranteed continued fairly supported, the last quotation of East Indian being 101⅞ to 102½. In foreign descriptions, Lombardo-Venetian were firmer. In American securities, the shares of the Michigan Central and bonds of the Michigan Southern improved. New Brunswick and Nova Scotia Government debentures receded. Mines were in moderate demand, and in one or two instances showed an advance. Joint stock banks were rather dull. No change of importance occurred in miscellaneous descriptions.

FRIDAY, April 13.—The dealings in the railway share market to-day were limited. Prices, however, showed more firmness. The foreign lines were inactive, and prices remained unaltered. In the colonial market, Grand Trunk of Canada declined to 33¾; and East Indian were steady at 101¾ 102.

FLUID BLACK WRITING INK—never thickens in the inkstand, permanently jet black, and produces copies by the machine—recommended for rapid writing, and adapted to climates of extreme heat or cold—in stone bottles, pints 12s dozen, quarts 24s; or packed in casks for exportation or the country, one dozen quarts 25s, two dozen 50s, three dozen £3 12s 6d.

NISSEN and PARKER, Engravers, Printers, Account Book Makers, Manufacturing and Exporting Stationers, 43 Mark lane, London.

THE GREAT EXHIBITION OF 1851—Council Medal, Exposition Universelle, 1855—Grande Medaille d'Honneur.—Gallery of Bronzes d'Art.—F. BARBEDIENNE and CO., of Paris, respectfully inform the British public, that a complete COLLECTION of their MATHEMATICAL REDUCTIONS (by the process of M. Collas) from the CHEF D'ŒUVRES of ANTIQUE and MODERN STATUARY in the Galleries of of the Louvre, Florence, and Rome, Museum of Naples, and British Museum, may be seen at Messrs JACKSON and GRAHAM'S, 35, 37, and 38 Oxford street. The Prices the same as in Paris, with the charges of importation only added. Catalogues, with marginal illustrations, may be had free on application. N.B. A large and splended collection of Ornamental Clocks, Vases, Candelabra, and other objects of taste.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

FLEET STREET.
A NEW DISCOVERY IN TEETH.
MR HOWARD, SURGEON-DENTIST, 52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

AT HAMBLY HOUSE ACADEMY Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

SOYER'S SULTANA SAUCE Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that her futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warahouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."
6 Edwards street. Portman square, London.

SPRING AND SUMMER ATTIRE.—E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have ransacked the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of Minories and Aldgate, and corner of New Oxford street and Hart street.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the History of British Costume, with self-measurement and list of prices, gratis on application, or post free.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

THE GREAT EASTERN.—An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

ON SPINAL AND OTHER DEFORMITIES.
PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.
AND
Just published, second edition, price 1s 6d,
CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: JohnChurchill; and may be had of al booksellers.

POSITIVELY THE LAST SEASON.
DR KAHN, IN RETIRING FROM the position he has so successfully occupied for many years, takes this opportunity of thanking most cordially the public who have so liberally supported and rewarded his exertions, and begs to inform his numerous patrons that this is the last season of his popular lectures Dr Kahn will continue to deliver his Lectures on the "Philosophy of Marriage," daily at 3 and 8, at his Museum, top of the Haymarket. Admission, One Shilling.

Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

NOTICE.

28 Long lane, West Smithfield, City.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and o be had of all booksellers.

MORE CURES OF ASTHMA, CONSUMPTION, COUGHS, &c., by DR LOCOCK'S PULMONIC WAFERS.—From Mr C. Reinhardt, Chemist, 22 Market place, Hull.—"Gentlemen,—Many and surprising are the testimonials of relief afforded to confirmed cases of asthma and consumption, and long-standing coughs, and it will gratify me to refer to many respectable parties who are really anxious to make known the great benefit they have derived from this seasonable remedy. I enclose a testimonial of no ordinary value, as it is the genuine expression of a grateful man's feelings.—I remain, J. C. REINHARDT." Dr Locock's Pulmonic Wafers give instant relief and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. To singers and public speakers they are invaluable for clearing and strengthening the voice. They have a pleasa t taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all druggists.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d an 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to ohn White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases o WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price rom 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hœmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Desies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

RIMMEL'S RIFLE VOLUNTEER BOUQUET is the fashionable Perfume for this season. Price 2s 6d. Entered at Stationers' hall. Rimmel's Almanack of the Language of Flowers, price 6d; by post for 7 stamps.

Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteaus, &c., portable and suited to all climates.

Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich,

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

HOLLOWAY'S PILLS AND OINTMENT.—Debility, Consumption.—In no diseases are the results of the alterative and tonic influence of these invaluable remedies more apparent or more gratifying than in that feeble condition of the body which precedes consumption. A change for the better is observed ere this treatment has been followed for a week, and the improvement steadily progresses, the melancholy emaciation gives place to health, strength, and cheerfulness. The ointment should be rubbed most effectually between the shoulders, on the chest, and left side. Two pills should be taken nightly, and the air should be sought. This treatment, duly followed, will soon arrest both cough and feverishness; while the perspirations and debility will daily decrease till strength return.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq., M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by Mr Curtis having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 11 3, and 6 till 8. Sundays from 10 till 1.

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM & BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s: Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—

The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

A TOILETTE REQUISITE FOR

THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM OF COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street orth, Strand, W.C.

ARMY CONTRACTS.—

Tenders will be received at this Office until noon on the 1st of May, from persons who may be willing to enter into Contracts for the supply of BREAD and MEAT, in such quantities as may be required, for the use of Her Majesty's Land Forces stationed in the following places, from 1st June to 30th November, 1860; and FORAGE, from 1st June to 31st October, 1860:—

1. Brompton House, Hyde Park, and Kensington—Bread, Meat, and Forage.
2. Regent's Park, St John's Wood, and Portman Street Barracks—Bread, Meat, and Forage.
3. Wellington Barracks, Horse Guards, Buckingham Palace, and St George's Barracks—Bread, Meat, and Forage.
4. Tower, Bethnal Green, Finsbury, and Hackney—Bread, Meat, and Forage.

(Forage for all the above in one Contract.)

5. Hounslow and Kneller Hall—Bread, Meat, and Forage.
6. Hampton Court—Bread, Meat, and Forage.
7. Windsor—Bread, Meat, and Forage.
8. Brighton, with Coast Forts from Newhaven to Shoreham—Bread, Meat, and Forage.
9. Croydon—Bread and Meat.
10. Aldershot—Flour, Meat, and Forage.
11. Sandhurst—Bread, Meat, and Forage.
12. Guernsey—Bread and Meat.
13. Jersey—Bread and Meat.
14. Alderney—Bread and Meat.

Separate tenders for bread, for meat, and for forage, must be made for each of the above-mentioned stations or barracks as separately grouped and numbered.

Forms of tender, and conditions of contract, may be obtained on application at this office, by letter or in person, between the hours of 10 and 4 o'clock.

Tenders on the printed forms must be properly filled up and signed, and delivered at the undermentioned office, under closed envelope (marked on the outside "Tender for Commissariat Supplies,") before noon on the 1st May next.

W. T. POWER, Deputy Commissary General.
Commissariat office, 5 New street, Spring gardens, London, S. W., 1st April, 1860.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality.	Medium Quality.	Best Quality.
	£ s d	£ s d	£ s d
Two dozen full-size Table Knives, ivory handles	2 4 0	3 6 0	4 12 0
One-and-a-half dozen full-size Cheese do	1 4 0	1 14 0	2 11 0
One pair regular Meat Carvers	0 7 6	0 11 0	0 15 6
One pair extra size do	0 8 6	0 12 0	0 16 6
One pair Poultry Carvers	0 7 6	0 11 0	0 15 6
One Steel for sharpening	0 3 0	0 4 0	0 6 0
Complete Service	4 14 6	6 18 6	9 16 6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets: and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable in buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III, c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,
MAPPIN BROTHERS,
Queen's Cutlery Works, Sheffield; and
67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

TEETH.—MR ESKELL,

Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic), and Leanett's hill, Birmingham. Established 1847.

ROYAL ITALIAN OPERA,

COVENT GARDEN.

On Tuesday next, April 17, will be performed Meyerbeer's New Romantic Opera, entitled DINORAH; or, Il Pellegrinaggio di Ploëromel. Principal characters by Madame Miolan Carvalho, Mdlle Giuditta Sylvia, Sig. Gardoni, Sig. Tagliafico, Sig. Neri Baraldi; and Monsieur Faure.

Leonora, Mdlle Csillag (her first appearance in England).

THEATRE ROYAL, DRURY LANE.

GRAND ENGLISH OPERA.

The management have much pleasure in announcing to the public, that the Operatic Performances having given general satisfaction, will be repeated every evening until further notice.

See the opinions of the public press.

Monday evening, April 16th, will be presented Verdi's favourite opera of IL TROVATORE. Manrico, Mr Hy. Haigh; Count de Luna, Mr Charles Durand; Ferrando, Mr Thompson; Ruiz, Mr Salvie; Azucena, Miss Emma Heywood; and Leonora, Miss Dyer. Before the opera, the Band, comprising upwards of Sixty performers, will play the Overture to Oberon.

Tuesday, April 17, and during the week, will be performed a favourite English opera, supported by the following eminent artistes:—Miss Dyer, Miss Emma Heywood, &c., &c.; Messrs Henry Haigh, Melchor Winter Salvie, Borrani, Thompson, and Charles Durand; and a Band and Chorus of 100 performers. Conductor and Musical Director, Dr JAMES PECH. In consequence of its great success the performance will conclude each evening with a petite ballet comique, by Flexmore, entitled THE SPANISH DANCERS; or, Two too Many. In the course of the ballet, Pas by Mdlle Auriol and Mr Flexmore, and the grand corps de ballet; Bolero, Mdlle Auriol and Flexmore; Valse by the Spanish Dancers; Zapateodo by Mdlle Auriol and Flexmore, and the corps de ballet of this theatre. Stage Manager, Mr James Martin; Ballet Master, Mr Flexmore; Treasurer, Mr Lewis. Reduced prices:—Stalls, 4s; Dress Circle, 3s; First Circle, 2s 6d; Pit, 2s; Upper Boxes, 1s 6d; Gallery, 1s; Upper Gallery, 6d; Private Boxes from 10s 6d upwards. The Box-office, under the direction of Mr Nugent, open daily.

NEW THEATRE ROYAL ADELPHI.

Sole Proprietor and Manager, Mr B. Webster.

Last 12 Nights of the Popular Drama of The Dead Heart (in consequence of Mr B. Webster's engagements at Bath, Bristol, and Manchester, commencing the 30th of April).

On Monday, and during the week, the Original Drama of THE DEAD HEART. Mr B. Webster, J. L. Toole, D. Fisher, P. Bedford, Billington, Stuart, C. J. Smith, Powell, Romer; Miss Woolgar, K. Kelly, and Laidlaw. And the Grand Musical Fairy Extravaganza of THE FAIR ONE WITH THE GOLDEN LOCKS. Messrs J. L. Toole, P. Bedford, Eburne, Powell, Romer; Miss Woolgar, Miss Emily Thorne (her first appearance), Miss K. Kelly, Miss Laidlaw.

Doors open at ½-past 6, commence at 7.—Box-office open from 10 till 5. No charge for booking.

Acting Manager, Mr B. Webster.

ASTLEY'S ROYAL

AMPHITHEATRE.

Proprietor, Mr Wm. Batty.
Sole Manager, Mr E. Hughes.

Never in the history of this theatre has there been such a perfect triumph achieved as on Monday last. The new spectacle was hailed with enthusiastic plaudits, and has been pronounced by the press and the public the most magnificent, thrilling, and interesting hippodrama ever witnessed. The eminent equestrian artistes were applauded to the echo; while the gorgeous decorations of the theatre were the theme of universal admiration. On Monday, April 16th, 1860, and during the week, the entertainments will commence with the great military spectacle, in 4 acts, entitled THE HISTORY OF A FLAG. With new and splendid scenery by Messrs Cuthbert, Days, Herbert and Thorne. New costumes and appointments, and introducing the stud of beautiful horses and ponies, camels, military band, and a host of auxiliaries. To be succeeded by a most recherché display in the cirque, supported by he accomplished equestrian artistes, Mdlles Monet, Marie, Fernande, De Berg; Messrs H. Williams, Devereux, Watt-son, Fernando, and the wonder of the world "Jonathan Jack." Clowns, Messrs Charles Watson and Thorne. Terminating with a laughable Farce. Doors open at ½-past 6, commence at 7. Stage manager, Mr W. West. Box-office open daily from 11 till 4.

EAU-DE-VIE.—THIS PURE PALE

BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

ALLEN'S PATENT

PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand London

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large Assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road W.

TRADE 8/9 MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—The LANCET states, "This is superior to anything of the kind known."—The most wholesome part of the best Indian corn, prepared by a process patented for the Three Kingdoms and France, and wherever it becomes known obtains great favour for Puddings, Custards, Blancmange; all the uses of the finest arrow root, and especially suited to the delicacy of Children and Invalids. —BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Manchester, Dublin, and London.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates.

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas. Liverpool.

MR LEWIS AND SON, 113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible syatems, insures perfection in any of the above branches after a few easy and interesting lessons Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand

---

ALLSOPP'S PALE OR BITTER ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pals Ale in Casks of 18 Gallons and upwards, at the Brewery, Barton-on-Trent; and at the undermentioned Branch Establishments:—

LONDON	At 61 King William street, City.
LIVERPOOL	At Cook street.
MANCHESTER	At Dacie place.
DUDLEY	At Burnt Tree.
EDINBURGH	At Union street lane.
GLASGOW	At 115 St Vincent street.
DUBLIN	At 1 Crampton quay.
CORK	At 25 Cook street.
BIRMINGHAM	At Temple street.
WOLVERHAMPTON	At Exchange street.
WORCESTER	At the Cross
SOUTH WALES	At 18 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

TO MERCHANTS AND OTHERS — Very Important.—The following letter has been received by the Secretary of the Additional Curates Society:—

London, Feb. 27, 1860.

Rev. Sir,—I should be glad to know how far the following plan would meet the wishes of your Committee.

I am thinking of making a special contribution (intended to be annual for at least some years, provided nothing unforeseen occurs), towards providing additional clergy for those parts of the metropolis where they are most needed, and which are the least able to provide them for themselves.

My wish, however, is that, wherever practicable, the parish or district shall provide a portion of the clergyman's stipend to meet a grant from the fund which it is my desire to help to form. It would also be my wish that, in order to get the parish or district gradually to find the whole of the stipend, grants should only be made for a limited number of years.—say 3, 5, or 7—and with the understanding that they should annually be decreased. Should I resolve on contributing £200 or £300 a year, is it your opinion that others would be induced to join in the work? On those who make their money in a particular town or city it appears to me that there is an especial call to provide for the spiritual wants of the humbler inhabitants of that town or city, and I trust that there are many in London who will acknowledge the claim.—Yours obediently, A MERCHANT.

To Rev. W. R. Cosens, 7 Whitehall, S.W.

It is earnestly hoped that others who are interested in the humbler inhabitants of the metropolis may feel the claim upon them to provide for their spiritual wants, and assist in forming a London Diocesan Fund. All communications and contributations may be addressed to Rev. W. R. Cosens, the Secretary of the Society for Promoting the Employment of Additional Curates in Populous Places, at 7 Whitehall, S.W.

REDUCTION OF TEN POUNDS PER TON IN THE PRICE OF

THORLEY'S FOOD FOR CATTLE

On and after the 1st of April, 1860.

Barrels containing 448 feeds, weight net 112 lbs, with measure, 40s each.

Cases containing 448 feeds, weight net 112 lbs, in packets, 45s each.

Carriage paid to any Railway Station in the Kingdom.

Nutritive value	£15
Condimental value	125
Total	£140 per ton.

Showing a profit of £100 per ton, through the use of this invalnable compound, adapted for the seasoning of all kinds of food for animals.

Agents required in every town where none are already appointed.

JOSEPH THORLEY, the Inventor and Sole Proprietor.

Offices, 77 Newgate street, London.

A pamphlet sent free by post on application.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners prove that a half-pint of DR DE JONGH'S Oil is equal in remedial effects to a quart of any other kind. Hence as it is incomparably the best, so it is likewise far the cheapest.

Palatableness, speedy efficacy, safety, and economy unitedly recomend this unrivalled preparation to invalids.

Opinion of A. B. GRANVILLE, Esq., M.D., L.R.C.P., F.R.S., Author of "The Spas of Germany," "On Sudden Death," &c.

"Dr Granville has found that DR DE JONGH'S Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Newfoundland Oils. The Oil being, moreover, much more palatable, Dr Granville's patients have themselves expressed a preference for Dr De Jough's Light Brown Cod Liver Oil."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES,

ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

NATIONAL DISCOUNT COMPANY (LIMITED), 35 Cornhill, London. Subscribed Capital, £2,000,000. Paid up, £385,345.

Approved mercantile bills discounted for parties properly introduced.

Money received at interest on deposit, repayable on call or at fixed periods.—By order of the Board,

RICHARD PRICE, Secretary.

Cornhill, April, 1860.

THE TRUST AND LOAN COMPANY of UPPER CANADA. Incorporated by Royal Charter. Capital £1,000,000.

TRUSTEES.

Thomas Baring Esq., M.P. | G. Carr Glyn, Esq., M.P.

DIRECTORS.

The Right Hon. Henry Pleydell Bouverie, M.P., President.

William Chapman, Esq., Deputy Chairman.

James Hutchinson, Esq.	Matthew Uzielli, Esq.
Charles Morrison, Esq.	T. M. Weguelin, Esq.
William G. Thompson, Esq.	

BANKERS—Messrs Glyn, Mills, and Co.

The Directors are prepared to grant Debentures for loans of sums of £100 and upwards, for periods of 3, 5, 7, or 10 years.

Any information required can be obtained on application to the Secretary. FRED. FEARON, Secretary

65 Moorgate street, London.

SCINDE RAILWAY COMPANY.—The Directors are prepared to receive Tenders for sums of not less than £100 of the unappropriated portion of the £250,000 Debentures, payable in five years, about to be issued under the guarantee of the Secretary of State for India in Council, bearing five per cent interest, and convertible into stock at par, at the option of the holder.—By order of the Board,

THOS. BURNELL, Secretary.

Gresham House, Old Bread street, April 10, 1860.

CEYLON RAILWAY COMPANY.—Notice is hereby given, that the Thirteenth Half-Yearly General Meeting of the Shareholders of the Ceylon Railway Company will be held at the offices of the Company, 9 Broad street buildings, London, on Monday, the 30th day of April instant, at Two o'clock in the afternoon precisely, to receive a report from the directors and for other business.

The Transfer Books will be closed from the 23rd April, inclusive, until immediately after the meeting.—By order of the Board, G. E. COOPER, Secretary.

9 Broad street buildings, London, 5th April, 1860.

EAST INDIAN RAILWAY COMPANY.—Notice is hereby given, that the Thirteenth Annual General Meeting of the East Indian Railway Company will be held at the London Tavern, Bishopsgate street, on Thursday, the 26th day of April, 1860, at One o'clock precisely, in conformity with the terms of the Company's Deed of Settlement.

The Transfer Books of the Company will be closed from the 16th to the 30th day of April, both days inclusive.—By Order of the Board,

D. I. NOAD, Secretary.

East Indian Railway House, London, 12th April, 1860.

GREAT INDIAN PENINSULA RAILWAY COMPANY.

Twenty-First Half-Yearly General Meeting.

Notice is hereby given, that the Twenty-First Half-Yearly General Meeting of the Proprietors in this Company will be held at the London Tavern, Bishopsgate street, London, on Friday, the 27th day of April instant, at Twelve o'clock at noon precisely, for the general business of the Company, pursuant to the Act.

The Books for the registration of Shares will be closed from Saturday the 14th, to Friday the 27th instant inclusive, and transfers will not be received during that period.—By order, THOS R WATT. Secretary.

Company's offices, No. 3, New Broad street, E.C., London, 9th April, 1860.

THE OAKERTHORPE IRON AND COAL COMPANY (Limited).

Registered 25th November, 1859.

Offices, 8 New Broad street, London, E.C.

Capital, £120,000, in 12,000 shares of £10 each to be paid up by five calls of £2 each; the first to be paid down and the remainder at intervals of two months.

The object of the company is the working of the mines of Ironstone and coal under the Oakerthorpe estates in the parish of Wingfield, in the county of Derby.

The profits of the company it is estimated will be fully equal to 15 per cent. per annum on the capital employed.

The general management of the concern has been placed in the hands of Messrs Woodhouse and Jeffcock of Derby, and the management of the furnaces in the hands of Mr William Evans, late of the Dowlais Iron Works, Merthyr Tydvil.

A large number of shares have been allotted. Applications for the remaining unallotted shares should be addressed either to Edward Corry, Esq., the Secretary pro tem., at the offices of the Company, 8 New Broad street, London; to Messrs Woodhouse and Jeffcock Derby; to the solicitors, Messrs Stuart and Baly, Gray's inn square, London; to Mr John Smith, Bennett's hill, Birmingham; Mr Robert McEwen, Ducie buildings, Manchester; Messrs T. Earp and Son, Derby; or Messrs F. E. and S. Smith, Sheffield; from either of whom prospectuses and printed forms of application for shares may be obtained.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making a offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

The Political Economist.

THE INJUDICIOUS CONDUCT OF A GREAT DISCOUNT HOUSE.

THE peculiar features of the Bank return contained in our last number have been completely explained by a paper which has been laid on the table of the House of Commons. That return showed that the reserve of *notes* in the Banking Department had decreased between the 4th of April and the 11th of April from 6,842,000*l* to 4,922,000*l*; and the magnitude of the change naturally excited much remark. The paper laid before Parliament proves that almost the whole of that decrease was caused by a large increase of 1,000*l* notes. The figures are these :—

RETURN of BANK NOTES issued by the ISSUE DEPARTMENT of the BANK of ENGLAND.

	On April 4, 1860.	On April 11, 1860.
	£	£
5*l* notes	7,261,000	7,340,000
10*l* notes	4,387,000	4,413,000
20*l* to 100*l* notes	6,672,000	6,536,000
200*l* to 500*l* notes.....	1,593,000	1,593,000
1,000*l* notes	1,927,000	3,585,000
Notes held by the public	21,845,000	23,467,000
Notes held by the Bank	6,842,000	4,922,000

Now, as 1,000*l* notes are a kind of circulation very rarely used, it was evident that some peculiar agency must have been in operation, and it is now ascertained that the house of Overend, Gurney, and Co. took from the Bank about 1,650,000*l*, and placed it in their own coffers.

Of course to this in itself the public could have no objection. The money was theirs. The payment of the dividends had given them an unusual command of money, and if they distrusted the solvency of the Bank, or for any other reason thought it safer to keep their own cash in their own till, it would not be becoming in others to remark on it, still less would it be proper for us to write about it. But, as Mr Gladstone observed on Thursday evening, the firm in question do not desire that their course of conduct should be kept a secret; they say that they adopted it on public grounds, and wish it to be subjected to public discussion.

Their object was a very simple one. As our readers are well aware, there has been an unceasing dispute for some months between the bill-brokers and the Bank of England, in consequence of the rule which excludes the brokers from the Discount Office of the Bank. The greatest bill-broking house in London desired to put an end to this if possible; they wished to show the Bank how strong they were—how much money they had control over—how much they could withdraw at a critical instant. Accordingly, they took advantage of a moment at which it seemed likely that the Bank reserve would be less than it had ever been since the end of the panic of 1857, and at which they themselves happened to have rather more spare money than usual: they withdrew the whole of it from the Bank.

What has been the result? We find from the return of this week that the "great house" have put their money back again. We are not aware that they have gained anything,—that they have brought their lamentable dispute with the Bank nearer to a conclusion,—that they have elucidated anything, or accomplished anything. They have, indeed, shown their power. But every one knew that Messrs Overend and Co. dealt with millions, and to deal with millions is a great power.

And though they have not gained anything themselves, they certainly did some harm to the public: they caused some days' uneasiness. So large a reduction in the reserve of notes could not but create some anxious feeling, even if the cause had been known, but at first it was only known vaguely. There were rumours of a "conspiracy among money-dealers," and firms which had no concern in what had been done, were said to have participated in doing it. So extraordinary a course of conduct adopted by such persons, under such circumstances, could not but cause some degree of anxiety.

We have very lately expressed our views at length on the merits of the dispute between the Bank and the bill-brokers, and we need not recur to that subject at present. We can only regret that what has occurred is likely to embitter the discussion between them. The Bank of England cannot afford to be frightened; Messrs. Overend and Co. have in simple English attempted to frighten them. A firm in such credit as Messrs Overend cannot like to fail in so marked a manner; and yet they have replaced their money, and all goes on as before. On the 7th of April we suggested a course which we thought, and still think, might close the dispute; but possibly too much irritation may have been created—possibly it is too late for that now.

MR MASSEY'S MOTION FOR A SELECT COMMITTEE ON THE REFORM BILL.

THE Democratic party assert boldly, but we believe quite falsely, that Mr Massey's proposal to refer the Reform Bill to a Select Committee is intended as a decent funereal rite. The scornful manner in which the reactionary Liberals exult over the inextricable difficulties of any statesmanlike solution of the problem of Reform, lends to this view its only colour of truth. We are persuaded that Mr Massey does not regard the Select Committee he proposes as an honourable interment. We are persuaded that he is honestly anxious to avail himself of the present temper of the House to secure an investigation which might not merely issue in a measure likely to pass,—but in a measure that would lay down the true principles and supplement the defects of our present representative system, without entailing more serious defects of an opposite kind. This cannot be done without a fresh and careful examination,—an examination, moreover, which it need be no great reproach to the present Government that it has not already undertaken and concluded. Lord John Russell has always frankly admitted that his Bill was adapted, not to the highest

exigencies of political principle, but to the requirements of the House of Commons. He has assured deputations, and he has assured the House of Commons itself, that, individually, he would have preferred to do much which he has not done, if not to leave undone much which he has done,—but that he thought it impracticable, unadapted to the wishes of the national assembly. Now, that much seems to be practicable which a few months ago was thought impracticable, there seems to us good and sufficient reason—,though from Lord John Russell's answer last night to Mr Edwin James, we fear that he scarcely agrees with us,—to avail himself of the change, and to call into his counsels a Committee likely to support him in taking constitutional guarantees that the whole nation shall not be represented by the votes of its least educated and thoughtful part.

If the Select Committee were intended merely to act the part of mutes at the obsequies of the Reform Bill, we, at all events, should protest against Mr Massey's proposal as a signal confession of the incapacity of Parliament to deal with a great constitutional problem, on the necessity of some solution for which, statesman after statesman and government after government have pledged their credit. It would simply be an act of cowardice,—the quailing of commonplace minds before a great question of State-policy and principle,—for the House again to set aside the question of Parliamentary Reform. After the universal admission that we want such an enfranchisement of the working classes as would not involve,—*either immediately or ultimately* by any further extension of the same method,—a disfranchisement of the middle and higher classes,—after this, to get rid of the Reform question by a side-wind would be a serious failure of Parliament in a great national duty. There are scarcely any who deny that the present system involves a real injustice to one class in the nation. There are a very large number who see clearly that any change tending towards mere Democracy involves an exactly similar and greater injustice to the classes which the present system unduly favours. And while we protest heartily against the cynical and contemptuous cry of "Let well alone, even though "to do so involve a serious and not irremediable injustice," we protest as strongly against the objectionable simplicity of a measure which, by transferring the whole power from a small class to one of overwhelming numbers, turns a remediable evil into one far more serious and beyond the possibility of cure.

The question of Reform is, in truth, eminently one for a Select Committee, but, we would add, for a Select Committee composed of members who agree as to the end to be attained and are anxious to discuss the means. The Select Committee will answer no end, will do more harm than good, if it is to include men who do not care to provide for the fair representation of all classes in the nation,—who are not willing to admit the difficulty caused by the enormous numerical preponderance of one class,—nay, who are desirous to ignore it. If Mr Massey's proposition is to be carried, as we trust it may be, in spite of the reluctance of the Government, it ought to be carried as a distinct triumph over the Democratic principle, and the Committee chosen ought to include none who do not recognise the problem to be solved, and who cannot, therefore, wish to solve it. If it is to be of any use at all, the Select Committee must meet with this defined object,—to admit the working classes, but, in admitting them, to apportion power, not to numbers, but to representative needs and electoral capacity. Within the limits of this problem, the spokesmen of all rational schemes should be freely admitted,—but none who dispute *in limine* the reasonableness of the search, and none who, even though admitting this, proclaim also that they would rather throw the question aside altogether than run the risk and incur the annoyance of change.

It is urged against the reference to a Select Committee, that if all possible bearings of the proposed electoral changes are to be known and discussed beforehand, legislation can never be ripe,—and that elaborate statistics have already been prepared by successive Governments which contain all the data that can be needed. The very simple answer is, that new data at random are not needed,—but data for a very intelligible, distinct, and specific purpose, which has never before been kept resolutely in view. We want to know the most feasible and acceptable plan for securing to property and intelligence their fair weight, when a class with much less property and much less culture, but immeasurably larger numbers, is admitted into the field of political representation. Now this is a comparatively narrow question of means. It will involve a careful selection from among various expedients. For that purpose evidence must be anxiously weighed, and the operation of various measures compared. Mr Massey's own suggestion of dividing boroughs into wards of nearly equal wealth, but widely different populations, is by no means one that can be decided on off-hand. It would be useless for the purpose we are considering, unless we could secure an adequate classification of the different districts of boroughs into rich wards and poor wards. If the boroughs were so divided that a rich and poor quarter went to make up each ward, the purpose of the change would be wholly defeated; and if the population were so fluctuating that the rich quarter of one year became the poor quarter of the next, it could not adequately be carried out. Here alone is a problem, and by no means an easy problem, for a Select Committee.

Again, if any form of plural voting were adopted,—if an elector were to have a number of votes varying up to a certain limit in proportion to his taxation,—the question would arise how to adjust this principle so as to secure a real representation for the working classes of the great manufacturing boroughs, and to secure no more than a fair preponderance in the Legislature to wealth and education. Here again is a question which only a Select Committee could venture to approach with any chance of success.

Again, if it should appear, as a letter in another column very plausibly urges, that the working classes of the manufacturing districts are entitled to a representation to which the 6*l* householders of the small boroughs can lay no claim at all,—if it should seem the just and natural solution to vary the franchise according to the teaching of experience, and to accord the franchise in such places as Manchester and Preston to a class of householders who have been proved to be corrupt in Wakefield and Gloucester,—if this, we say, as our correspondent affirms, should seem the natural and just conclusion, then a Select Committee alone could bring out adequately the evidence in support of this variable franchise, and the proper area of the extended suffrage.

Or if, finally, either, separately, or in conjunction with any of these measures, it should seem desirable, as we think it will, to accord to each voter the power of concentrating all his votes on one candidate, if he so please, or of distributing them at pleasure, here again would be a check on the tyrannical power of a numerical majority which would require and be well worth the careful consideration of a Committee. Would such a privilege be likely to give more power to the thoughtful minority at the top of a constituency, or to the corruptible minority at its base? Would it act as a premium on honest party zeal and the strenuous compactness of principle, or as a premium on dishonest coalitions and conspiracies to extort bribes? Could we safely risk the occasional abuse of it to the latter purpose for the sake of its legitimate use for the former? All these and other like inquiries are, we affirm, questions which must be answered before any statesmanlike shape can be given to the Reform Bill, before justice to the thoughtless and lightly-taxed many can be reconciled with justice to the thoughtful and heavily-taxed few. To say that the consideration of such questions is an evasive attempt to get rid of an unwelcome duty is simply to assert that such questions are idle, and merely raised for the sake of blinding men's eyes with dust. We maintain, on the contrary, that, so far from being blinding dust-clouds, they involve the whole distinction between Reform and Deterioration.

THE DANGEROUS CONDITION OF THE RURAL POPULATION OF BENGAL.

The alarming intelligence which has reached us from Lower Bengal of a threatened insurrection on the part of the peasantry in the indigo-growing districts was not altogether unexpected. Those who are intimately acquainted with the peculiar system adopted by the indigo planters and with the feelings of the peasantry on the subject will not be surprised at the result. We have heard for some time past of growing discontent on the part of the ryots of the Kishnaghur district, and at length "the trodden worm has turned." In a recent review of a book, entitled "Rural Life in Bengal," we endeavoured to

escribe the relations of the planter and ryot, and we will ow briefly recapitulate them. The so-called indigo planter, the particular part of Bengal where these disturbances ave occurred, is not, properly speaking, a planter at all. Ie is a manufacturer of indigo, who builds his works in ocalities which are suited for the growth of that plant. He btains from the native landowner a long lease of the lands here he wants to have indigo sown, and by that means, as sort of "middleman," obtains the traditional and illegal uthority which the landowner himself exercises, throughout ower Bengal, over the ryots or resident tenants of the soil. f course, these latter have, by law, a perfect right to ultivate what crops they choose; but they are a people by ature timid and feeble, and have been accustomed for enerations to the degrading influence of oppression and yranny. The landowners are accustomed to levy from them l manner of illegal exactions,—to raise their rents and rn them out of their holdings in direct contravention of the w, because they will rather fly from their homes and ander over the country than resist the armed retainers nt against them. Ignorant and debased, they resort to the tifices to which cowardice and misery prompt them. They eat their oppressors whenever they can. Fertile in icanery and stratagem, there is no device of falsehood or aud to which they will not resort.

The English planter in many districts takes the place of e native landowner, and accepts the "duties of his posi- tion." He wants to have indigo grown for his factory, and tells the ryots living on the estate of which he has taken e lease, that they must sow their lands with indigo. They ject to doing so: they find rice, oil-seed, and other ops more profitable. Indigo is new to them, and they uld prefer going on with the crops to which they are customed. Besides, they hear that indigo is a very un- rtain crop, and the risk of growing it is very great. That the very reason why the planter does not himself take nd for his own cultivation by hired labourers. He does t want the trouble and risk of cultivation. He prefers to row it all on the ryots. But they object. What shall he ? His native underlings, land agents, and stewards im- diately advise him to follow the old-established example the native landlords. "These wretched peasantry are too stupid to know their own interests; they must be threatened and cajoled into growing the indigo. They must be offered advances of cash at the time of the year when they are hard up and cannot resist the temptation; and they must be told that if they do not consent to take the advances they shall have their ploughs carried off, their lands sown with indigo by force, and their other crops trampled down by droves of cattle." The planter hears but nothing can be done without putting on the screw in s way. It is the "custom of the country," and the people ll not do as he wishes without it. Besides, if they are paid hat he considers) a fair price for the crop, what right have y to complain?

The peasantry, thriftless and ignorant, are universally erwhelmed with debt, deep in the books of the village ney-lender, to whom their crops are hypothecated before y are sown; and they cannot resist the cash advance with ich the planter tempts them. From that moment they in his toils, and they can never again return to the culti- ion of their favourite and more remunerative crops. The ot gets an advance of four shillings for every beegah* which sows with indigo, and a beegah often produces no more than r shillings' worth of indigo, according to the planter's valua- n. So when he has brought the plant to the factory, so far m having any money to receive, he probably finds that he n debt to the planter for the value of the indigo seed which planter advanced to him. He has given his labour, he has d the rent of his land, his cattle and ploughs have had ar and tear,—all for no result but to make him a debtor the planter; so that he is forced to sow again for next r, whether he likes it or not, to pay off his debt;—bably with the result of getting each time deeper and per in the planter's books. He could not go on at all but the profits of his other crops, and by constant loans from money-lender, to whom he pays a ruinous amount of rest, and to whom at last, perhaps, he has to pledge his land, as well as his crops, if he has any of his own independently of what he holds from the landlord.

Things may not be always and everywhere as bad as we have described. In some cases there may be a more liberal payment for indigo; in others, the planter may take care that his servants do not deduct one-half from the amount due to the ryot in the shape of *douceurs*;—but, wherever the system of advances prevails, the evils we have described are of constant occurrence. Our statements are based upon public documents, the admissions of the planters themselves, the testimony of civil officers intimately acquainted with these districts, and that of the missionaries living among the people and having an opportunity, such as no other Englishmen possess, of knowing the true state of things.

The Calcutta correspondent of the *Times* says, that the remedy is to improve the process of the courts established for civil suits, recovery of debts, &c., so as to make the hearing of such cases less protracted and expensive. We believe that the new Civil Code has already effected something towards this desirable end. But, in the particular case now before us, the true meaning of the recommendation is, that, at the suit of the planter, the ryots shall be summarily fined and punished when they break their engagements or try to avoid working out their advances. We admit to the full that the ryots do everything in their power to break their engagements, and, after taking these advances, to avoid growing the hated indigo crop. But, looking at the circumstances in which these wretched peasants are placed,—looking at the temptations they are under, their low moral and intellectual condition,—we cannot blame them much for fighting their oppressors with the only weapons at their command. And we certainly think it would be a gross act of injustice to legislate for the purpose of strengthening the hands of the planters. The profits on indigo manufacture are very great, and the planters should themselves undertake the risk of the cultivation, instead of throwing the whole loss on the impoverished peasantry. We would oblige them to do it everywhere by putting an end to the advance system. This would soon be accomplished by making such advances irrecoverable in the courts. It would terminate a state of things which is most demoralising in its influence on the people, and which, in their eyes, identifies the name of Englishman with all that is oppressive and unjust. To grant what the planters have been pressing the Government for years past to yield, viz., to enable them to recover their advances summarily, and to force the ryots to keep their engagements by prosecuting them in the magistrates' courts, would be to identify the Government itself, in the eyes of the whole population, with a hateful system of oppression, which is so unbearable as at last to have driven the most submissive and timid population in the world into insurrection.

If the planters find it difficult to cultivate on their own account, through want of labourers or any such cause, there is another course open to them. Let them offer a price for indigo which will remunerate the grower handsomely, and thus make it worth while to the ryot to grow indigo. They are keen and shrewd enough in knowing where their own interests lie—no people in the world more so. This is the course adopted in the case of other crops. Englishmen go into the villages and buy at the markets and fairs rice, or hemp, or silk cocoons, &c.; and they will probably find indigo brought to their factories when they pay a proper price for it.

We have had a Colonisation Committee of the House of Commons, at the instance of the planters, to consider their grievances. We want still more a committee to consider the grievances of the peasantry of Bengal. Three years ago the missionaries of Bengal memorialised the Government to hold a commission of inquiry into the subject, urging it on the ground of the miserable condition of the people and of the dangers which were involved in such a state of things. The indebtedness of the Santhal peasants to the money-lenders,—the slow and complicated process of the civil courts, utterly unadapted to the habits of such an ignorant and primitive population,—their consequent impoverishment, and the loss of their lands through debts and mortgages incurred they hardly knew how,—produced four years ago an insurrection of the whole population, accompanied with a frightful massacre of men, women, and children. If we do not take care we shall have a far worse,—because a more extended,—agrarian war throughout Lower Bengal.

* Two-thirds of an acre.

A committee of inquiry into the condition of the rural population of Bengal, before which missionaries, civil officers, and planters should be examined, might be of essential service to the people of Bengal, and would probably lend great weight to our proposal for abolishing the system of "indigo "advances," by making them irrecoverable at law.

UNIVERSITIES AND THEIR RELATION TO POLITICS.

In that thoughtful, polished, and striking address, in which Mr Gladstone, in the marvellous fertility and elasticity of his intellectual resources, found time, in spite of the exhausting pressure of his other duties, to thank his supporters in the University of Edinburgh for electing him their Rector, —he made some remarks, which are not only in themselves valuable, but which have a special importance at the present moment in relation to the Government proposal to confer the Parliamentary franchise on the Scotch Universities and the University of London. It was worth noting, he said, that Universities, as a rule, cherished within them respect for traditional authority in free countries, and a free spirit in despotic countries. "Universities were, in truth, a "great mediating power between the high and the low, "between the old and the new, between speculation and "action, between authority and freedom. Of these last "words, in their application to the political sphere, "modern history and the experience of our own time afford "abundant exemplification. In countries which enjoy political "liberty the Universities are usually firm supporters of the "established order of things; but in countries under absolute "government they acquire a bias towards innovation. Some "excess may be noted in these tendencies, but in the main "they bear witness against greater and more pernicious ex- "cesses. To take instances, the University of Edinburgh "did not very easily accommodate itself to the revolution in "1688; it was long, the 18th century, before Cambridge "returned Whig representatives to Parliament, and, I be- "lieve, the very latest of the Jacobite risings and riots "occurred in Oxford. On the other hand, in some conti- "nental countries it has been the practice during the present "century, when the political horizon threatened, at once to "close the Universities, as the probable centres of agitation— "a proceeding so strange, according to our ideas and expe- "rience, that the fact may sound hardly credible; and "within the last few weeks we may all have seen notices in "the public journals of movements in the University of "Rome itself adverse to the Pontifical Government."

No doubt the characteristic result of all University culture is to widen men's intellectual tastes and range of view, and, therefore, to sharpen their antagonism to any one-sided influence, whether intellectual or practical, which threatens an arbitrary limit to those tastes, or inculcates an intellectual obedience which they cannot endure. Hence it is natural enough that in a country like England, the great national Universities should have cherished a dislike to the narrowness of thought which distinguished the Puritanism of the seventeenth century, and in a greater or less degree the dissenting sects which sprang out of it,—and should have firmly supported the State in resistance to it. And it is equally intelligible why, in Italy, Germany, and France, where the pressure of intellectual restraint was never imposed from below, but always from above,—where, either from the alliance of the Roman Church with the State or other analogous causes, it is the common experience of University life to find all that is noble and humane in literature marked with the veto of authoritative displeasure,—the tendency of University culture has been to create opposition to the State, and to multiply centres of patriotic discontent.

But, apart from this universal influence of University culture, there is no doubt, as Mr Gladstone himself more than intimates, a special tendency in Universities identified with the Established Church to cherish a type of culture which, though not subservient to any kind of narrow intellectual despotism, is yet indifferent to the wants of the people and to the practical desire for popular self-government. Men of unpractical culture constantly spring up from our Universities who would resent any kind of attempt to impose intellectual servitude, and who yet cannot understand the passion for political liberty, because they do not themselves care in the least to influence the nation's actions and to share the public responsibilities of the State. Such men of culture our Universities,—all Universities,—produce in abundance; but they are in a special way the offspring of such Universities as Oxford and Cambridge, where certain fundamental dogmatic principles and assumptions are woven into the whole system of society, and, if canvassed at all, canvassed only by the exceptional sceptic,—not asserted and maintained with the earnest and anxious diligence of an unpopular sect, or of a party in conflict with large bodies of Englishmen. The moral atmosphere of the national Universities is as favourable to neutral culture as it is unfavourable on the whole to that hardy and eager inquiry into first principles and that anxious consideration of individual intellectual responsibilities, which are cherished in the free atmosphere of such Universities as Edinburgh, Glasgow, and London,—or those of Germany in almost all of which rival faiths plead side by side. Hence, we believe, it is that while Oxford and Cambridge have turned out minds more perfectly trained and disciplined than any Universities in Europe,—they have given birth to less political freedom, energy, and zeal than almost any Universities in Europe. In such a man as the late Sir Robert Peel or as Mr Gladstone himself, where the highest culture of Oxford is engrafted on something of the indomitable energy and individuality of Lancashire, we have by no means typical specimens of the political results which the University training tends to produce. But, in general, we believe it will be found that while the older Universities are far more perfect as instruments of intellectual discipline,—the younger, both English and Scotch, contain, in proportion to their magnitude, far more active and original political elements,—far more energetic interest in the principles of politics —and, in short, for more independent political life. The characteristic width of thought which a University tends to give at the expense sometimes of strong convictions, and even of the desire to form strong convictions, is tempered in the free Universities by the constant discussion of those fundamental and all-important principles on which the different classes of students are at issue. This gives a manlier, deeper, and more practical tone to the general current of thought, if it to some extent detracts from the perfection of University discipline. The Scotch and London Universities combine not a few of the advantages of self-culture, with the inestimable advantages of good teaching, and can well afford to be something behindhand, as they are, in this last respect as compared with the great national schools.

It is on this account that we heartily rejoice in the intention of the Legislature to enfranchise these Universities by the Reform Bill. Their representatives will probably be found to be "mediating powers" between the old and the new, between the counties and the manufacturing towns, between the languid conservatism of the nation and the narrow democracy of the lower orders. They will appreciate the worth of liberal and popular instincts, without losing sight of the importance of strong and intelligent government; they will redeem the learning of the country from the charge of continual bias towards reactionary politics; and yet, as we trust, they will do so on steady constitutional principles. No precedent, at all events, could be more favourable for their future political career than the wise choice which the University of Edinburgh has made in the selection of its first Rector.

ANSWERS TO INQUIRIES ON THE NEW STAMP ACT.

The Board of Inland Revenue have issued the following replies to questions:—

A bill drawn abroad remitted to this country is not liable to any stamp duty until it is negotiated within the Kingdom or presented for payment.

If a bill has been negotiated it has become liable to the duty which was payable at the time when it was first negotiated, and being at that time duly stamped it can become chargeable with no other duty either upon any further negotiation, or upon being presented for payment.

But where a bill which arrived in the kingdom before the recent Act is retained without being negotiated, and therefore without being subject to any immediate charge of duty until after the passing of the Act 23 Victoria, chap. 15, it must, upon the first nego-

tiation of it, or if it be not negotiated upon being presented for payment, be stamped with the duty imposed by that Act.

TO THE SECRETARY OF INLAND REVENUE.

City, April 11, 1860.

Sir,—Will you be be good enough to state whether the following bills and drafts, "endorsed out of the United Kingdom," require foreign bill stamps to be affixed before being paid?

1. Post bills of the Bank of England.

2. Drafts drawn by bankers upon bankers, in accordance with the provisons of the 9th of Geo. IV., c. 23.

3. Drafts on demand, payable to bearer or to order, drawn and payable in the United Kingdom, and bearing one penny stamp.

I shall also feel obliged by your informing me what is the amount of duty payable upon a "promissory note for the payment either to the bearer on demand, or in any other manner than to the bearer on demand, for any sum exceeding 4,000*l*?"

It appears to me, from a careful reading of the recent Stamp Act, that no provision has been made for promissory notes above 4,000*l*, and that the Act 17th and 18th of Victoria, c. 83, is still in force for sums of such amounts. J. H. C.

Inland Revenue, Somerset House, April 16.

Sir,—The Board of Inland Revenue have had before them your letter of the 11th inst., and, in reply, I am directed to state that promissory notes are not affected by the recent Stamp Act; the duties upon them remain as they were under the 17th and 18th of Victoria, cap. 83. The alteration relating to them was deferred till the next Stamp Bill.

Bills or drafts of any description drawn within the Kingdom are not really liable to any additional duty by reason of being negotiated abroad. The word "endorsed" in the schedule was not in the Bill as it was drawn; it was unadvisedly inserted while in the House of Commons; it has no effect whatever, and must therefore be disregarded.—I am, Sir, your obedient servant,

J. Sargent.

We have received the following letter relative to the New Stamp Act:—

TO THE EDITOR OF THE ECONOMIST.

April 17, 1860.

Sir,—Will you kindly favour your readers by saying what you consider is the meaning of the words "first negotiated" in the first clause of the New Stamp Act relating to foreign bills of exchange?

Some persons hold that a bill remitted from abroad to this country is "first negotiated" when it is accepted by the drawee and entered to the account of the remitter in the books of his correspondent here; and, consequently, that any such bill, duly stamped at that time, supposing it to be prior to the 3rd instant, is *not* liable to the new duty.—I am, Sir, your obedient servant,

G. M. Y.

We do not consider that a bill can be said to be negotiated until some money is advanced upon it. Merely placing it to the credit of a party would not therefore be a negotiation; it is first negotiated when it is first drawn upon.

We have also received the following:—

TO THE EDITOR OF THE ECONOMIST.

City, April 18, 1860.

Sir,—The recent change in the Stamp law, whereby a draft, payable on demand, drawn or endorsed out of the United Kingdom, is required to bear an *ad volorem* stamp in the same manner as a bill after date or sight so drawn, involves, it may be fairly assumed, not merely a change in the amount of the stamp, but in the legal character of the instrument itself. In the case of the draft on demand, bearing a penny stamp, it is specially provided that the banker on whom it is drawn shall not be liable to responsibility as to the genuineness of the endorsements it may bear, all that is required being that such draft shall purport to be endorsed by the party to whom it is payable. The banker enjoys no such immunity from risk in the case of foreign bills. Again, the draft on demand has not usually been protested; but, if the circumstance that, under certain contingencies, such drafts require to bear a foreign bill stamp, places the draft so stamped in the category of foreign bills, it will immediately become subject to all the legal requirements of bills of that class in case of dishonour. It is most important, therefore, that it should be distinctly announced whether or not, under the recent enactment, those drafts payable on demand, which become subject to stamp duty as foreign bills, thereby become *ipso facto* foreign bills. If you can kindly clear up this point, you will oblige many besides,—Yours, faithfully,

G. B. D.

The clause referred to by our correspondent is as follows:—

Bill of Exchange, Draft, or Order (Foreign) drawn or indorsed out of the United Kingdom for the payment of money on demand—The same duty as on an inland bill of exchange for the payment of money otherwise than on demand, according to the amount thereby made payable.

We apprehend that this clause does not in any way change any of the legal incidents of the documents referred to. It imposes a certain stamp duty on them, but that is all. In all other respects they remain as they were before.

HOW TO AMEND THE REFORM BILL.

TO THE EDITOR OF THE ECONOMIST.

Clevedon, April 19, 1860.

Sir,—The state of the Reform question has, I think, materially changed within the last few weeks. Public opinion has undergone a remarkable alteration. When Lord John first proposed his Bill, there was a sort of rapid acquiescence in its provisions. To be rid of the subject, most persons seemed ready to pass this Bill or any Bill. Now, on the contrary, there is much genuine anxiety; we are beginning to comprehend the magnitude of our danger; we are ready to think over the matter as carefully as we can.

The effect of the main provision of the Bill—the reduction of the borough franchise to 6*l*—will, I think, be very different in the small boroughs from what we may expect it to be in the large. In the great towns we are told, and I believe told truly, that there is an unenfranchised class, an artisan class, which, in intelligence, in independence, in social comfort, is on a level with many classes which now possess the franchise. We are informed, and I believe we are informed truly, that this class has peculiar political tendencies, peculiar prejudices to a certain extent, peculiar thoughts, which make it desirable that it should have a recognised organ in the House of Commons—that the Legislature should not totally and entirely be ignorant of its views. Let us concede that such is the case in the large towns. But can any one find this class in the small towns? Can any one who knows a petty agricultural borough say, that he knows there any considerable number of persons too poor to be reached by the present property qualification, and yet intelligent enough to deserve the franchise? I do not believe, among all our extreme Reformers, you would find *one* who would say "yes" to that question. For this part of the subject is one on which we all have some means of informing ourselves. The large manufacturing cities are inevitably "a great unknown" to many of us; it requires long residence, protracted investigation, careful study, to know them well. But almost all Englishmen know some petty country town or other. Let them endeavour to find there this peculiar intelligent class, with great political aptitudes and new political thoughts. They would never find it; they know it would be ludicrous even to look for it.

It is common to say that we know nothing of the new class which the 6*l* franchise would include. And, as far as respects the great cities, it may in some measure be so. But in the small boroughs it is not so. There is no reason for doubting that the new class whom we are about to enfranchise would resemble the *lowest order of the present voters*. They are one degree poorer, but there is no chance of any other difference. No one can pretend to allege that in our petty boroughs a person who lives in a 6*l* house is the least likely to be *more* intelligent or *more* independent than a man who lives in a 10*l* house. Now what the lowest order of our present voters are we know. We know that in every small borough there is at the bottom of the scale a corrupt element which expects to be bribed at every election, and has no idea of the value of a political privilege except the privilege of being paid. This painful fact has been proved before hundreds of election committees, and if we could have a committee to examine the purses of members of Parliament, we should know even more about it than we do now. Why, then, should we increase this "corruptible element"? Why should we add to the number of a class the very existence of which we lament? Why should we, who *say* we are opposed to bribery, augment the number of persons whom we *know* will be bribed?

The argument for so doing is this:—'There exists, as we 'have seen, a large artisan class in the great industrial cities 'whom we exceedingly wish to enfranchise. Now we *must* 'have a uniform franchise: it would be absurd that a man with 'a 6*l* house in one town should have a vote, and a man with a 'similar house in another town not have a vote. If, therefore, 'we enfranchise the independent uncorrupt labourer of the 'large town, we cannot help enfranchising the dependent and 'corrupt voter of the small one.'

This argument is exactly that which was used for the Tory Reform Bill last year. Why, said Lord Stanley, should a man with a certain qualification in a borough have a vote, and one with the very same qualification in a county not have a vote. He did not, however, succeed in convincing us that

there was anything absurd in this. Last year all our great Liberal statesmen were eloquent *against* a uniformity of franchise. Why, then, should they be superstitious about it now?

It is not true that there is a greater distinction between town and town than between many parts of every county and many boroughs comprised in every county. On the contrary, there is an enormous difference between Manchester and Evesham, between Liverpool and Abingdon. There is exceedingly little difference between Chippenham and Calne, which are boroughs, and other country towns which are included in the counties. Small agricultural towns are the facsimiles of one another; if there is no objection to a dissimilarity of franchise between one of these and another, there can be no objection to a dissimilarity of franchise in constituencies so unlike as a large city and a petty borough.

The whole object of the Reform Bill, as far as it has an object, is to include the artisan class in the large cities. Why not then do that, and leave the small towns as they are? Lower the franchise, if it is desirable, so low as to reach the class which you wish to reach; but do not do any more. There may be a rare and exceptional element in the great seats of industry which requires representation. Give it a representation, but do not also increase the corrupt class in towns which are already purchasable enough.

I am well aware of the great objection to lowering the franchise even in the large towns. It is said that you thereby almost entirely disfranchise the most educated, instructed, and competent persons in the country, who live in those towns. The number of the low class is so great, that it swamps the cultivated persons who are few. But this objection applies to the present Bill. Not only does it introduce an utterly indefensible element in the small towns, but, in practice, it will annihilate the most educated and competent class in the large towns.

It seems to me that a tolerably simple expedient would remove both these dangerous errors. Give, as is proposed, certain large towns three members, and in those towns, and in those only, lower the franchise to 6*l*. This will give you the representation of the artisan class which you desire. Then, to preserve to the higher classes a measure of influence, recur to the "minority principle" in the manner suggested in the bill of 1854. Let each voter in these towns have two votes only, and, as the number of members will be three, any tolerable minority, anything greater than two-fifths, will be able to secure the return of one member. The better part of the population will then have a single representative, whereas under the Bill now proposed they will have none whatever.

By this plan there will be a distinct line drawn between towns in which the franchise is lowered, and those in which it will remain as it is. When a town is large enough to claim three members, the artisan class will certainly be numerous, and, if that claim is considered valid, give it three members, with an annexed expedient for preserving some power to the best classes; but leave all towns not large enough to claim three members just as they now are. Do not do for the small places what you do for the large places; you might just as well put heavy weights upon little boys, because you have found that large and full-grown men can carry them.

I know the difficulty of obtaining attention to a scheme of Reform. But the matter is now become serious. The indifferent stage — the *pooh-poohing* stage — is past. The public are agreed that the Reform Bill is either to be mended or discarded; and, if it is to be mended, as all sincere reformers wish, let us look anxiously and carefully for what may prove to be the best way of mending it.—I am, yours faithfully, WALTER BAGEHOT.

MR WILSON'S REMARKS ON A GOLD CURRENCY FOR INDIA.

(Extracted from his Speech on the Currency, delivered at Calcutta, 3rd March.)

"BUT before I proceed further, I am desirous of here noticing some proposals that have been made from time to time in India for the purpose of remedying the defects of our monetary system by the introduction of gold coins. Now, Sir, I must say that, having given all the proposals which have been made for this purpose, or that are capable of being made, our most careful consideration, I am unable to recognise in any one of them a reasonable or unobjectionable mode accomplishing the object. Shall we adopt a double standa of gold and silver? Sir, few will be found to advocate su a plan. No doubt, gold and silver vary in their intrins value in relation to each other, much less than perhaps a other two articles that could be named; but, nevertheles they do vary, and that not inconsiderably, as the experien of the last few years has shown. In relation to silver, go is certainly at least five per cent. cheaper than it w ten years ago; and when we come to treat of nation obligations, that may represent a large sum. Wh effect then would the adoption of a double standa have? Why, clearly to enable the debtor to dischar his obligation in whichever might at the time be the cheape metal. This, Sir, would destroy the whole object, and t great utility of a standard at all, and would simply enab the debtor to pay in one material what he had contracted pay in another. Sir, we are not prepared to adopt a measu admittedly so defective and so unsound. But, then, it h been proposed that gold coins should be circulated, a should pass only at their intrinsic value, fluctuating from d to day according to the fluctuations of the price of gold. B Sir, it would be a mere misnomer to call such coins mone Could the transactions of a country be carried on with coi which to-day might represent 10 rupees and 8 anna to-morrow 10 rupees, and the next day 9 rupees a 8 annas, and so on? Think of the inconvenience whi would arise from such a system, and the altercatio which would ensue between buyer and seller as to wh the real intrinsic value was from day to day, or ev from hour to hour. Again, think of the dissatisfaction whi would naturally be felt by any one who, having received coin of the Government at one rate to-day, found, when required to use it to-morrow, that it had fallen in value 4 or 8 annas. Sir, if there is one duty more than anoth which the Government owes to the public in respect to i monetary arrangements, it is that the coins which it cire lates with its authority shall be of one common and u varying value. But another proposal has been made, wi a view of obviating the evil of a fluctuating value. It h been proposed that gold coins shall be issued, representi 10 rupees of a certain weight and fineness, and that the value should be fixed by law as a legal tender for given period of time, say six months or a yea when the exact value should be readjusted according the market value of gold for another period of time. B what would be the practical effect of such a plan? If, aft the value was fixed, gold were to rise in price, then the can be no doubt all the gold would disappear from circul tion—if, on the other hand, gold were to fall in price, would become profitable to send gold to the Mint to get coined, and with it to purchase silver coin at a profit. such case no doubt a considerable quantity of gold would forced into circulation. But the day of reckoning would so come—the time when a readjustment of the legal tend value of the coin would take place. A large quantity coins which has passed as legal tender for ten rupees for certain time would on readjustment pass for nine rupe eight annas. Who is to bear the loss! The unfortuna holders at the time the readjustment took place. Wou this be a satisfactory arrangement? My own belief is, th in practice all these schemes to make two metals, which a always less or more varying in price towards each othe circulate in strict uniformity, would entirely fail. It has be tried in Europe under the most favourable circumstances, a has failed there. I have here a monetary convention, whi was entered into in 1856, between the Austrian Governme and all the other German States, with a view to have o uniform current coin. Every one who has travelled throu Germany is aware of the great inconvenience which result from the various coins which were in circulation throughe those States. The standard of value in Germany and t current coin are of silver, as is the case in India. But so of the parties to the Treaty, and especially the Governme of Austria, were anxious to supplement their silver curren with gold coins, as has been desired in India. The plan t this purpose provided for by the Treaty is similar to th upon which I have just commented:—it was provided th gold coins should be issued at a fixed valuation wh should remain a legal tender, and current for six mont

and should then again be subject to readjustment in their current value according to the market price of gold; and so on, a new readjustment taking place every six months. The words of the Treaty are:—

"Extract from the German Monetary Convention, dated January 24th, 1857.

"Article XXI. para. *a*.—That each State is at liberty to allow their gold coins (Article XVIII.) to be taken at their treasuries in lieu of silver, at a rate of exchange to be beforehand decided upon; and this at all treasuries, and for all payments, or only partially, as shall be thought proper. Such pre-decided rate of exchange shall last at the utmost for six months, and at the close of the last month is to be each time re-considered for the next similar period.

"Well, Sir, when I saw that propositions of a similar character had been made here, I wrote to Lord Wodehouse, the Under-Secretary of State for Foreign Affairs, and begged that he would ascertain from the Austrian Ministry what had been the practical effect of that provision in the Treaty. I have just received his Lordship's reply. He encloses a communication from Lord Augustus Loftus, our Minister at Vienna, of which the following are extracts:—

"Extract from Despatch of Lord A. Loftus, No. 92, dated November 8th, 1859.

"The provisions of the convention between Austria and the Zollverein States, affording the faculty of supplementing their legal currency by the addition of gold coinage, have virtually been a dead letter as regards Austria.

* * * * * *

"Under these circumstances, the provisions in the monetary convention in question, as far as regards gold, have never been acted on, and very little gold, comparatively, has been coined in Austria, that metal for some years past being little current, and principally confined to the hands of money-dealers and merchants, for the purpose of making payments in foreign parts; it cannot, therefore, be reckoned an active or operative portion of the specie currency of the Empire.

"Sir, the experience of Germany is no encouragement for India to rely upon impracticable schemes of this nature for the improvement of our currency. But then another and more extensive change has been suggested, and that from a quarter deserving of every consideration. It has been said—Why not change our standard of value?—why not, as in England, adopt a gold standard, supplemented by silver tokens of limited tender as subordinate coins? Sir, if we had now to begin *de novo*, no one will doubt that that would be a much preferable plan to that which we now find in use. But we have to deal with a system already established—a system under which an enormous amount of obligations, both public and private, has been incurred. As I have already said, those obligations in reality are to pay a given quantity of silver. And if we were now to change our standard of value, and to adopt gold in place of silver, because the former is becoming cheaper in relation to the latter, I think no one can doubt that we should by law be enabling every debtor—the State amongst others—to commit a breach of faith upon his creditor. Let us bear in mind that a reduction in the price of gold of only five per cent. would, under such circumstances, in effect reduce the claim of the holders of the public debt of India by no less a sum than five millions sterling. Sir, we are bent upon reform and economy in every legitimate shape that lies within our reach, but we believe that the credit of the Government will be best sustained by the most rigid observance of good faith in all its transactions."

INDIAN PAPER CURRENCY AND THE ACT OF 1844.

[COMMUNICATED.]

The introduction of a paper currency into India has reopened a discussion of great commercial and scientific importance.

The Indian Government proposes to adopt a circulation of notes, based on a reserve of coin equal to at least one-third of the value of the notes issued. Criticism has at once taken alarm, and already denounces the project as a departure from the principles of the Bank Act of 1844. It protests against a fluctuating reserve, and vaunts the merits of the self-regulating action of a fixed limit, beyond which every issue of notes must be balanced by a corresponding addition to the reserve of bullion.

The admiration of the Act of 1844 has become quite a superstition. It is defended with more than the usual intolerance of theorists, and the Indian Government will confer a very real benefit on this country by drawing public attention to the evils which we suffer from the present system.

The Act of 1844 was directed against a purely imaginary danger. Great calamities had arisen at various times from bad banking and injudicious trading; but the true causes of the mischief not having been perceived, a remedy was sought by taking costly precaution against an evil which had never had any existence. The securing of the convertibility of the Bank note into gold was vehemently proclaimed as the object on which every effort was to be concentrated. Yet that convertibility had never been in the least danger. At no period since the repeal of the law which restricted the Bank from paying its notes in gold, the Bank note has not suffered the smallest depreciation compared with gold. Trade has been violently agitated, and the fortunes of many have been swept away; interest has often risen to enormous rates, discount become almost unprocurable, and even the power of the Bank to meet the demands of its depositors has been questioned: but one thing the fury of no storm has been able to shake,—the value of the Bank note. At no time has the note of the Bank of England not been held as good as gold.

In the panic of 1825, the Bank escaped stoppage by the discovery of a million, not of gold, but one-pound notes. In the far more terrible panic of 1847, after the Act of 1844 had come into operation, deposits were withdrawn from the Bank, not in gold, but in notes; and these notes were hoarded in the strong boxes of the merchants, without the slightest misgiving as to their value. What they dreaded was not the worthlessness of their Bank notes, but the danger that the Bank might not be able to discount bills or repay deposits. This was shown by a remarkable fact. As soon as an order in Council suspended the Bank Act, and enabled the Bank to issue notes on its own credit, without storing up gold, the panic was immediately relieved; and the notes, abstracted by hoarding from trade and circulation, flowed back to the discount office of the Bank.

The loss caused by this system is very heavy. It involves a large extinction of capital. The limit of 14 millions, up to which the Bank may issue notes uncovered by gold, was selected upon no scientific principles. It was the result of the pure accident that the Government owed this sum to the Bank. The debt of the State doubtless secured the holder of notes against ultimate loss; but it certainly gave him no guarantee whatever that he could get gold for them on demand. Experience has shown that, although there have been more disastrous panics since 1844 than before, the bullion in the Bank has not been reduced below eight millions. The point of distress only has been shifted. When the Bank had eight millions, the pressure has been still severer than when it had only one.

Seven millions, therefore, have been mere surplusage; of no more use for banking or any other purpose than so many pebbles; a waste of interest to the Bank and of profitable capital to trade; a gratuitous diminution of the very benefit contemplated by the employment of paper as currency.

But still more, the Act of 1844 most mischievously impairs the resources of the Bank in helping trade over difficulties. When pressure arises, the soundest securities and the most solid establishments are often exposed to imminent peril for want of temporary loans. It is precisely here where relief is most urgently needed, and can be most safely bestowed. A supply of spare capital at such times is invaluable. Is it not the extremity of perverseness that, amidst the fall of mercantile houses and the cries of distressed populations, so vast a sum as seven millions should be piled up in the Bank's treasury, and yet condemned to virtual annihilation by a baseless theory, in order to procure credit for notes which have never known discredit?

Many unreflecting persons suppose that under the Bank Act there is much less danger of pressure in the money market and difficulty of discounts, when the Bank possesses 17 millions of bullion than when it has only ten. This is a complete mistake. When the state of the money market has reduced the bullion to the extent of nine millions, the severity on trade is as great, nay greater than when under the old system, as in 1825, the Bank had but one million left. In fact, the Bank obtains no assistance whatever from its Issue Department. It reaps the profit of interest on the 14 millions of uncovered notes, and in every other respect, as regards Bank notes, is a banker, like all the other bankers, and nothing more. It has no more command over the bullion in its store than Glyn's or Masterman's.

The Indian measure will restore the true principle and the true practice. The amount of the reserve of bullion will be determined by experience, whilst the coin replaced by paper, instead of being senselessly and uselessly hoarded, will be directly available for profitable employment.

Agriculture.

FARMING COVENANTS.

We have often had occasion to show the impolicy of the numerous and restrictive regulations which are usually introduced into leases and farming agreements. These are commonly useless to the landlord, though often vexatious to the tenant. But then it is said, it may be well enough to permit a good tenant to farm without regulations laid down by the landlord, but what are you to do with a bad tenant?—that a bad tenant would greatly injure the land if permitted to farm without any prescribed regula

tions. Now, we say at once that all the regulations of the strictest lease ever used can never make a bad tenant farm well or prevent him from having his land in bad condition, while one of the consequences of such regulations is, that landlords and their agents, assuming they can so control the tenant and protect the landlord's interest, accept or retain as tenants men who have neither the capital nor the skill to use the farm properly. And strange as, at the first blush it may appear, there is always a tendency amongst English landlords and their agents to take the most inferior tenants from whom they believe payment of the rent can be got.

An inferior tenant will often engage to give more rent than a better farmer would think it prudent to offer, having regard to the actual state of the farm; he will make far less difficulty about bad buildings, bad roads, or no drainage; he will be more easily satisfied by the assurances usually made that the game shall not injure his crops; and he will be more submissive to the gamekeeper and more respectful to the steward, aye and to the landlord himself, than a man of capital and enterprise. Hence, there is always a certain, though unavowed leaning towards bad tenants, while restrictive covenants and stringent regulations, short tenures and the agent's watchfulness, form the frail reeds on which reliance is placed to save farms from the natural consequences of admitting tenants who are unequal to manage them with advantage. And these covenants form fruitful sources of complaints and strife. The tenant, too often careless in considering their possible operation, either disregards them, or finds himself hampered and at a disadvantage should he fall out with his landlord.

A correspondent of the *Mark Lane Express*, signing himself "A Land Agent," and writing from West Suffolk upon the subject of a farm agreement which appears to have been discussed in the columns of that journal, says:—"It is far from my desire to uphold the covenants contained in the agreement in question, but if the tenant was simple enough to sign an agreement containing such objectionable covenants, it is not fair of him to be a party to their exposure." We do not quite see the logic of that proposition. On the contrary, a tenant who has been simple enough to sign objectionable covenants is doing good service to all concerned in agriculture to expose their injurious influence in his own case. He afterwards says:—"My object in writing is merely to advise farmers in general to look more strictly into their covenants, and raise business objections to them *before* signing an agreement, and when once signed abide by the result." This seems to be reasonable; and there can be no doubt that in many instances farmers might and ought to consider and discuss the stipulations to which they are asked to bind themselves when taking farms, but we apprehend that in far more numerous instances very little opportunity is afforded to the tenant-farmer of discussing the special stipulations he is required to sign. We wish it were otherwise, for if once such objection and discussion became general, farming covenants would soon become rationalised and practical. As things are, we have no doubt of the truth of the Land Agent's remark when he says:—"It is not an unfrequent occurrence to find many farmers in my neighbourhood *who never read their agreement*, and really know no more about what they have agreed to perform than you do; and it is not an unusual circumstance to hear of men towards the end of their term grumble and find fault with their agent and landlord for the unreasonable and oppressive covenants they are under." Such, however, are the necessary fruits of a system which leaves to the tenant-farmer very little power of being an active or effective party to the contract he makes for his farm. The landlord lays down the regulations, and commonly the applicant for a farm can only accept those terms or reject the farm altogether, and it requires more of decision and business habits than the ordinary classes of tenant-farmers possess to act on the latter branch of the alternative.

LAND-DRAINING.

The very wet winter we have lately passed through has brought strongly to light the necessity of draining much land, which, during the four or five previous years of deficient moisture, was thought not to require to be drained. At the same time the contrast shown between land drained and land undrained, in the rapidity with which the former might be tilled, has never been greater. To observing men such striking illustrations of the necessity and the value of draining were not required, but to the far more numerous classes of unobservant owners and occupiers, the state of their land during the past winter cannot fail to stimulate them to fresh exertions in the way of land-draining. That it will do so there is no doubt. But in the present day there is more risk of imperfect draining, and consequent waste of capital, than of the total omission to drain. It is a process involving great outlay, it must be set about in the right way,—the right way not being that which is very commonly adopted,—and it must be executed under competent and vigilant superintendence. Now the failure of drainage is caused sometimes by the desire to avoid expense, and as deep cutting and tiles cost much money, various devices are resorted to. Shallow drains, formed with bushes, are still in common use where the whole cost of draining is thrown on the occupier, and, as a temporary measure—all a yearly tenant cares to effect—it answers his purpose. Then there is still a good deal of lingering prejudice in favour of shallow draining, under the belief that in strong soils the water will not readily be carried off by deep drains; and this belief has been fostered by injudicious applications of deep draining to clay land, where drains have been laid so wide apart as not effectually to dry the land. Here the fault lies not in the deep drains, but in the too small a number of them in a given area. We believe that in uniform clays, and clay loams, the drains should never be placed at greater distances from each other than eight yards=24 feet, and at that distance four-feet drains will effectually dry the strongest soils. Yet in such soils we hear of drains being placed at 35 and 40 feet apart, and that, though fully four feet deep, they do not dry the land. We wonder that any man acquainted with clay land should expect to dry it by such operations. Yet it is from such works that deep draining has occasionally suffered discredit. Then some people will persist in laying drains across instead of down the fall of the land. And, finally, insufficient attention is paid to the careful laying of the tiles, so that there be a uniform fall.

We have before us a new and revised edition of Mr Hewitt Davis, "Essays on the Improvement of Farming," in which, amongst many valuable and practical papers, there are some on draining so apt and instructive that we recommend them to the persual of all readers who are interested in the subject of land-draining. And Mr Davis is not one of those agricultural engineers who would sooth landowners into the belief that they can find a royal road to the permanent improvement of wet land by a cheap system of drainage, for he shows that to drain such land effectually a considerable outlay must be incurred. Hence he dwells on the necessity of taking care to render draining operations as perfect as possible. But assuming the outlay to be sufficient and the plan of draining adopted to be proper, much disappointment and partial failure may occur if the work be not carefully superintended during its execution. This is especially applicable to land having no great fall. Mr Davis mentions an instance of some extensive draining which had been done some time, on a clay soil and where the surface was nearly level, where he found that though the drains discharged freely and the surface generally was free from standing water, "yet there were spots, and over drains too, where it lay, after rain, some days." On examination he found the pipes were "carrying a continuous stream from end to end, and nowhere was there any impediment in the pipes, save that from some slight irregularity in maintaining a uniform fall, the *pipes in places ran at times full of water*. I found that, owing to slight inequalities in the surface, and inattention to maintaining a uniform inclination at the bottom of the drain, or from the pipes not being straight, there were places where the pipes for short distances lay low, *and ran full for a short time* after heavy rain; wherever this occurred there was no drainage for a time from the surface, and water rested in these spots. The surface wetness was occasioned by the pipes in these spots not always admitting the access of water from the exterior, and although they carried off the water brought to them from beyond, and the quantity in them was not sufficient to fill them, except in these low places, they were still inoperative in draining the land whenever they ran full." This was a defect proper superintendence would have prevented.

In one essay, written in 1850, Mr Davis dwells on the importance of the public money drainage loans, which, under the care of the Inclosure Commissioners, have been granted to landowners, but in a note of December last, he admits "that the legal provisions of the Act have been too difficult and expensive to comply with, and its place has been taken by private Acts granted to companies." Thus it ever is, that Government undertaking work beyond its legitimate province can never compete with private enterprise. Mr Davis is himself one of the inspectors of drainage under the Commissioners, and his experience and knowledge of the subject naturally give satisfaction and confidence to the landowners whose estates are drained by means of the Government loans, but what security is there, that he or any other of the able inspectors originally appointed may not be superseded or succeeded by some inexperienced pet or connection of men in office? Indeed it is quite time that the public money should be withdrawn from drainage loans. Private enterprise can do all that is required.

Literature.

American Securities. Practical Hints on the Tests of Stability and Profit, for the Guidance and Warning of British Investors. By An Anglo-American. Mann Nephews, Cornhill.

This is a very sensible pamphlet, pointing out judiciously enough the tests of safe railway investment in a newly settled-country like the United States. The object of the writer is to reduce within due limits the not ill-founded fear which is entertained by British capitalists for American securities of this class. He remarks, truly enough, that "though in England the pressure for good investments does not diminish, but waxes more formidable every year, our countrymen, deterred by some cases of disappointment, rather hold back when asked to look into the nature of American securities, and invited to take 7, 8, or 9 per cent. interest for their money, instead of the 3 per cent. given by Consols, or the 3½ to 4½ which is the utmost they can obtain from other

securities, including British railway stock, or bonds of good repute.' This is a somewhat exaggerated statement, as it is by no means difficult to get 5 per cent., and sometimes even more, on excellent security in the debentures or stock of British or Irish railway companies. Still, in substance, of course, it is true enough; and we believe our author exercises a sound discretion when he advises British capitalists to place confidence in American railway enterprises, as certain of success and as first-class investments, where they can be shown to fulfil the following tests:—

1. The possession by the shareholders of considerable extent of land in the immediate neighbourhood of the railway,—the rents of which will secure the interest of money expended and the working expenses long before the traffic of the line makes it self-supporting.

2. The existence upon such lands of valuable timber and mineral resources.

3. The line and its contiguous landed estate being so situated as not to absorb, in cost of conveyance, too large a proportion of the price obtainable at market for the various commodities forwarded.

4. Careful management and the existence of a "powerful British element" in the directoral department of such enterprises.

The author, though mentioning, scarcely lays stress enough on the last mentioned condition, and we wish to point out that, in point of fact, the distrust of British capitalists is directed more perhaps to the management than to the inherent advantages of transatlantic enterprises; nor is it easy to get over this difficulty by appointing British directors. If habitually absent, or on the spot only at rare intervals, they would in fact merely lend their names to sanction the American management, and yet more than this they could seldom do. A "powerful" British element in the direction it would not be easy to obtain.

The considerations advanced by our author as to the very much larger rate of profit which is by the very nature of the case attainable from the virgin soil of a new continent, are sound in themselves, extremely well-illustrated from Mr Connel Andrews' valuable tables, and, while familiar to all economists, will appear novel and striking to many readers. There are, however, one or two considerations on the opposite side which he has passed over, that go to justify the timidity felt by English lenders in lending their money on the security of American railway or other similar debentures, which it is only fair to state in connection with this subject. First, then, there is little doubt that the process of sinking fixed capital for the improvement of a new country must very often be ruinous to those who advance it, though in a generation or two the mere annual profit on such capital may become larger than the original capital sunk. This was the experience of England in her own railway mania,—it is the experience of every country which attempts to sink anything beyond its yearly savings in mere improvements, which, though they may increase the value of property, yet cannot at best do more than pay interest,—cannot, like circulating capital, hope to reproduce itself. Introducing railways in a new country, is like introducing machinery in a factory; on the cost of the machine you get a yearly profit, but it is many years before the sum paid for it is recovered by yearly instalments. Hence, America cannot afford to spend more than her *savings* on improvements such as railways: did she spend more, it would have to be squeezed out of her circulating capital, *i.e.*, out of the direct labour-fund of the country which yearly reproduces itself, and this would produce a crisis of distress and insolvency. Consequently, the United States find that their own resources in this direction are easily exhausted, and borrow a large part of the capital thus sunk on machinery from older and richer countries, like England. Thus we find that of the capital invested in American railways a very large proportion is raised on bonds,—which for the most part come to Europe,—a very much larger proportion than in England. Let us compare the amounts in 1855, the last year for which we are enabled to compare them. On referring to Captain Galton's report, we find the following statements:—

ENGLAND AND WALES—1855.

Total Capital Raised.			
Ordinary Shares.	Preferences and Guaranteed Shares.	Loans.
£	£	£
125,656,691	51,620,837	61,320,811

UNITED STATES—1855—FOR RAILWAYS OPEN.

Capital Stock paid in.	Bonds.	Floating Debt.
£	£	£
80,976,853	55,451,059,	7,177,285

So that while in England about one-third is raised on loan,—in the United States nearly half is so raised, and it is notorious that the bonds on which it is raised are held by European capitalists. Now it is certain that the same feeling of security cannot attach to undertakings in which so large a proportion of the capital is lent by persons who have no power to interfere in the management of the concern, as would attach to those in which by far the larger portion was contributed by the shareholders themselves. There is a feeling in England, to some extent just, that many of the American railways are set on foot by persons who have less interest in the success of the railway than in the additional value which the railway will give to the land through which it passes, and this naturally and legitimately disturbs the confidence of English investors.

With these qualifying remarks, we heartily recommend the pamphlet of the Anglo-American to our readers as sensible, and valuable, and apparently entirely dictated by disinterested motives, and not intended to win credit for any special American speculation.

TRAVELS IN EASTERN AFRICA; with a Narrative of a Residence in Mozambique. By LYONS MCLEOD, Esq., F.R.G.S., late H. B. M. Consul at Mozambique. Hurst and Blackett.

[SECOND NOTICE.]

THE evidence given in these volumes to prove that the "free labour" scheme, whatever were the intentions of its founders, however fair the treatment of the negroes on their arrival at their ultimate destination, did in fact renew the slave trade on the coasts and in the interior of Africa, is, we think, convincing. At first the increased demand for labourers was supplied from the over-numerous slaves of the Portuguese settlements, their condition in all probability being bettered by the change of masters; but, after a while, "slaves became scarce, the price rose, the demand still increased," and it became necessary to send into the interior for "free labourers." "At first it was found that the chiefs in the interior refused to comply with the demands of the Moors or Arabs, who went there for the purchase of slaves, alleging as a reason that it was contrary to the wish of the Portuguese Government that there should be any more traffic in slaves; and the Moors, on their return to Mozambique, declared to the Governor-General that they could not in consequence supply the demand." This over-conscientiousness on the part of the native chiefs was overcome by sending soldiers in the uniform of the King of Portugal back with the Moors into the interior. Being thus "guaranteed that the slave trade was authorised by the Portuguese Government, immediately they set to work to supply the traffic in earnest." "All the horrors which had accompanied the slave trade in the interior of Africa in former times were revived. Parents sold their children, and every available slave was disposed of to supply the demand; but this increasing, recourse was had to arms, for the purpose of capturing individual prisoners. Numbers perished in the deadliest warfare. This state of things was brought about by the Moors and the Portuguese soldiers who had accompanied them to procure the slaves. I have myself conversed with some of the actors in these scenes, and the facts which I have stated cannot be denied. At last a reaction took place; the natives found that they were destroying each other to obtain a few prisoners for the supply of the slave trade which the Portuguese were carrying on, and for a time they ceased from warfare, and again there was a scarcity in the slave market of Mozambique."

After a time emissaries were despatched up the country.

At first they were again successful, but at last the negroes, exasperated by the bloodshed which had again commenced among them, and attributing it to its correct cause, viz., the presence of the Portuguese soldiers among them, rose and destroyed some of them, and the survivors escaped only with their lives, to bring to the city of Mozambique the intelligence that all the natives had risen with the intention of driving the Portuguese into the sea.

By the influence of a Portuguese officer over the native chiefs, this danger was averted by promising for the future to refrain from attempting to obtain slaves from their country.

During these disturbances, while all the Portuguese were in alarm, the Consul's wife drove out daily among the natives unmolested; and he heard also "that the natives had determined only to spare my house, and those within it." "They knew well who the British Consul was, and the purpose for which I was sent to Mozambique."

The official character in which Mr McLeod resided at Mozambique, and which he had acted up to, to the extent of his power—while it preserved him from any danger of native hostility, exposed him to the not less deadly and more continuous hostility of the inhabitants of Mozambique. Owing to his representations Vasco Guedes had been superseded in his post; and the new Governor, General Almeida, entered upon his office with an apparent determination to enforce the decrees of the Home Government, and to support the British Consul in his efforts. It was at this time that the Charles et Georges was seized in the waters of Conducia Bay. "The slave trade was being effectually suppressed;" the enraged slave merchants were roused to a sense of their danger, and began a systematic resistance to their Governor and persecution of the Consul. At this critical juncture, a British frigate, the Castor, Captain Lyster, appeared in the port; the Consul, full of renewed hope, opened to Captain Lyster the full dangers of his position, and the inability of the Governor to protect him effectually unless well supported by England. "The next morning at daylight the Castor was observed, under her topsails, standing out to sea. It was imagined that H.M. frigate had gone in chase of some strange sail in the offing, but as day passed after day, the fearful and humiliating truth dawned on the inmates of the British Consulate, that they had been abandoned to their fate." The Castor left without even waiting for the despatches from the Consul. The consequences of this desertion was soon seen in the altered behaviour of the Governor-General, "for he anticipated that the British Government would not support Portugal in the struggle which he saw that weak Power would have with France. Those who have studied this subject may pronounce their own opinion, but one thing is certain, that to the base desertion of the British Consul at that critical period may be traced the subsequen

insolence of the slave-dealers, the increase of the slave trade, and the sufferings of H.M. Consul and family."

Mr McLeod was now deprived of all the slaves who had been left in his hired house. No one could be found to do anything for him or his family. "A cordon of slaves was established for the purpose of preventing any supplies coming near us." It was only owing to the compassion of these slaves, who, at their own peril, procured their prisoners food, that the inhabitants of the Consulate were not starved. At all hours of the night attacks were made on the house to terrify the inmates and deprive them of sleep. A notice was served on Mr McLeod to quit the only house he had any chance of obtaining, even when he first came to Mozambique; the fever attacked his family, but not a doctor of Mozambique would come near them; finally, even with a brig-of-war from England lying in the harbour, the slave-dealers became bold enough to mob his house, wounding his wife in the attack. The commander of the brig had given little help to the Consul of his nation, and had by his neglect played into the hands of the slave-traders; yet, when it became necessary that the brig should proceed to sea, "the Governor-General distinctly stated to me that he would not be answerable for any consequences which might ensue, affirming that he was totally unable to protect me against the slave-trade party, and that I would be doing a service to the interest of both my own country, and also that of Portugal, by representing his utter inability to protect the Consul of any nation professing anti-slavery principles, until his hands were strengthened by the Imperial Government of Portugal. Taking all the circumstances into consideration, after mature deliberation, it was decided in consultation with the senior naval officer, that the best course was to retire to Mauritius or even England, until such time as arrangements were made between England and Portugal for the reception of a British Consul in honour and safety at Mozambique. This decision was made known to His Excellency, which he looked upon as the wiser course, to prevent more serious results than had already arisen; and on the 18th of May I embarked on board H.M.S. Lyra, which had lately joined her consort from the Cape, with my fellow-sufferers."

Thus ended the first attempt of England to establish commercial relations with Mozambique on a regular and authorised footing. We trust the experience we have gained from this failure, and from the light thrown upon its causes by our persevering and courageous Consul, may assist in re-establishing the Consulate on a more secure and honourable basis; and in putting a close to that illegitimate trade which demoralises all who engage in it, and prevents the development of a most fertile region, admirably situated with regard both to labour and to facilities of commercial intercourse with other nations. Mr McLeod's description of the rich and varied productions and mineral wealth of Eastern Africa is not the least interesting portion of his work. There is not a tropical production of the Slave States of America that might not be successfully cultivated there, if the desolating slave wars were no longer encouraged, and the abundant labour now drafted to other countries were directed to the cultivation of its native soil. "In the African dominions of the Imâm of Muskat the slave trade is forbidden, spice gardens have arisen, the cocoa-nut is cultivated, and large exports of simsim seed annually take place." In other places the industry and prosperity of former years has been interrupted, if not destroyed, by the renewal of internal wars for the supply of the so-called free emigrants. We trust that this source of evil will now be suppressed, and that the progress of Africa in the cultivation of its natural products and the civilisation of its inhabitants may be, if slow, yet steady and continued.

Biographies of Lord Macaulay contributed to the Encyclopædia Britannica. With Notes of his Connection with Edinburgh, and Extracts from his Letters and Speeches. Edinburgh: A. and C. Black. 1860.

These biographies were well worth a separate reprint. Without the elaboration of Lord Macaulay's other essays, they have all the characteristic marks of his style and modes of thought. They show the same vivid conception of character, the same somewhat traditional standards of judgment, the same wealth of illustration, the same shrewdness of perception within (and not beyond) the familiar sphere of his thought. The lives here contained are five,—Atterbury, Bunyan, Goldsmith, Johnson, and Pitt. The portrait of Pitt is far the most finished,—for Pitt's was a mind which bore measuring by Lord Macaulay's standard well, and yet, unlike Atterbury's, was really a great mind of its class, and one that excited Lord Macaulay's sincere admiration. On Goldsmith, Macaulay was less fitted to pass judgment, and there is something jarring—not in the manly tone of censure in which he speaks of his vices,—but in the complete want of sympathy with Goldsmith's nature. The pliant, elastic, nerveless, thriftless, sensual, but warm-hearted Irishman, is anatomised in a tone approaching to contempt, which Lord Macaulay never employed even in dealing with the kindred faults and vices of any of his own especial heroes, such as Charles James Fox.

If his criticism on Goldsmith is jarring, that on Johnson is more, and that on Bunyan most so. In his love of the details of a graphic picture, he accentuates Johnson's oddities into almost hideous deformities, and though not for a moment omitting to describe his virtues and his most noble traits, yet he does so in an external manner, which leaves us wondering what subtle change it is which has transformed the really loveable though eccentric hero of Boswell's book into a human curiosity approaching the monstrous, and certainly utterly repulsive, in spite of the ticketed virtues. Carlyle's insight into Johnson is infinitely deeper than Lord Macaulay's.

In the life of Bunyan, the defects of the Macaulay style of portraiture are at their highest point,—for it is evident throughout that Macaulay is profoundly convinced that Bunyan's imagination is the fundamental thing about him, and his faith a rather unfortunate accident of the imaginative temperament,—while Bunyan himself certainly lived his life on the exactly opposite hypothesis. Hence the reader is uncomfortably conscious that the biographer is undertaking to account for Bunyan in a very off-hand manner,—nay, to apologise for him to the world on a ground which Bunyan would himself have repudiated, or rather did repudiate by every act of his life. It is a Whig theory of the author of the "Pilgrim's Progress" which we find in this little biography,—and by no means a satisfactory theory. Every one can feel how jarring and incongruous an essay of Lord Macaulay's on St Paul would have been;—and there is an approach to all the incongruities of such an attempt in this essay on Bunyan.

By far the noblest and most enduring of these essays is that on Pitt,—not unworthy to be placed beside the still greater essays on the elder Pitt. The portrait is finished and brilliant, for there was no central feature in Pitt's character which Macaulay was not able to apprehend and appreciate. We extract from it the following powerful and characteristic passage as the best recommendation of this little volume which it is in our power to give:—

Parliamentary government, like every other contrivance of man, has its advantages and its disadvantages. On the advantages there is no need to dilate. The history of England during the hundred and seventy years which have elapsed since the House of Commons became the most powerful body in the State, her immense and still growing prosperity, her freedom, her tranquillity, her greatness in arts, in science, and in arms, her maritime ascendancy, the marvels of her public credit, her American, her African, her Australian, her Asiatic empires, sufficiently prove the excellence of her institutions. But those institutions, though excellent, are assuredly not perfect. Parliamentary government is government by speaking. In such a government, the power of speaking is the most highly prized of all the qualities which a politician can possess; and that power may exist, in the highest degree, without judgment, without fortitude, without skill in reading the characters of men or the signs of the times, without any knowledge of the principles of legislation, or of political economy, and without any skill in diplomacy or in the administration of war. * * * * *

Pitt was emphatically the man of parliamentary government, the type of his class, the minion, the child, the spoiled child, of the House of Commons. For the House of Commons he had a hereditary, an infantine love. Through his whole boyhood, the House of Commons was never out of his thoughts, or out of the thoughts of his instructors. Reciting at his father's knee, reading Thucydides and Cicero into English, analysing the great Attic speeches on the Embassy and on the Crown, he was constantly in training for the conflicts of the House of Commons. He was a distinguished member of the House of Commons at twenty-one. The ability which he had displayed in the House of Commons made him the most powerful subject in Europe before he was twenty-five. It would have been happy for himself and for his country if his elevation had been deferred. Eight or ten years, during which he would have had leisure and opportunity for reading and reflection, for foreign travel, for social intercourse and free exchange of thought on equal terms with a great variety of companions, would have supplied what, without any fault on his part, was wanting to his powerful intellect. He had all the knowledge that he could be expected to have; that is to say, all the knowledge that a man can acquire while he is a student at Cambridge, and all the knowledge that a man can acquire when he is First Lord of the Treasury and Chancellor of the Exchequer. But the stock of general information which he brought from college, extraordinary for a boy, was far inferior to what Fox possessed, and beggarly when compared with the massy, the splendid, the various treasures laid up in the large mind of Burke. After Pitt became minister, he had no leisure to learn more than was necessary for the purposes of the day which was passing over him. What was necessary for those purposes such a man could learn with little difficulty. He was surrounded by experienced and able public servants. He could at any moment command their best assistance. From the stores which they produced his vigorous mind rapidly collected the materials for a good parliamentary case: and that was enough. Legislation and administration were with him secondary matters. To the work of framing statutes, of negotiating treaties, of organising fleets and armies, of sending forth expeditions, he gave only the leavings of his time and the dregs of his fine intellect. The strength and cap of his mind were all drawn in a different direction. It was when the House of Commons was to be convinced and persuaded that he put forth all his powers.

The prefatory portion of this volume, concerning Lord Macaulay's connection with Edinburgh, and containing extracts from his letters and speeches, does not add to the value of the volume.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The 15th of this month was the day originally fixed by the Government for bringing into operation the large reductions it recommends in the import duties on coffee, sugar, cocoa, and tea; and the still more extensive modifications it proposes in those on cotton

and wool. To-day is the 19th, and the Bills for effecting these reforms have not yet passed through the ordeal of examination in committees of the Legislative Body; and, consequently, it will be a fortnight at least, and most likely longer, before they can be discussed and passed. I need scarcely say that the delay has caused profound dissatisfaction in every seaport and every market; and really merchants and shipowners have just reason to complain that measures which so vitally affect their interests are not more promptly dealt with.

The shareholders of the Credit Foncier of France held their annual meetingy esterday. A dividend of 25f per share was declared for 1859, of which one-half has been already paid. This dividend is equal to not less than 10 per cent. on the paid-up capital; and, in addition to it, a sum of 394,000f was set apart to the reserve. Thus, the Credit Foncier, thanks to good management and to the wide field open to its operations, has obtained striking success.

The directors of the Paris, Lyons, and Mediterranean Railway Company announce that in the approaching general meeting of shareholders, they will propose a dividend of 63f 50c for the year 1859. Of this sum 20f have already been paid on account; and the balance is to be paid from 1st May next. The directors of the Northern Railway announce that they will, in the approaching annual meeting of the shareholders of the company, propose a dividend of 65f 50c. The Orleans Company declare that there is no truth in a report, which has been somewhat diligently spread, that a new creation of shares is about to take place. Considering that the shareholders of the company in their last meeting authorised the raising of a loan of 8,000,000*l* sterling, the said report must have appeared improbable to any one who would have taken the trouble to reflect.

The usual quarterly return of the direct and indirect taxes has been published, and it has been scanned with more than usual interest, in order to see the effect produced by the projected great commercial changes. Of direct taxes, the total paid up in the first three months of the present year was 110,972,000f, which was more by 31,592,000f than could legally have been exacted, and 3,700,000f more than was paid in advance at the same epoch last year. This, on the whole, is satisfactory. The return of indirect taxes is less so. The total of the first quarter of the present year was only 3,558,000f more than the corresponding quarter of last year, and 2,056,000f than that of 1858; and yet during the first three months of last year war with Austria was impending, and in the year before there was a great commercial crisis. On comparing the items of the indirect taxes for the present year with those of last year, there is much to be regretted. Thus there is a large reduction in the import duties on all sorts of goods except foreign sugar, a decline in the duties on exports, a heavy fall (1,444,000f) in the wine duties, that is in an article of general consumption; and, lastly, one in the duties on the manufacture of native sugar. Even the increase which has taken place in certain items is not free from objection; there is, for example, a large one in the registration and mortgage dues, which proves that the debt on real property must have largely increased, and that the sales of such property have been unusually frequent; there has, too, been a not inconsiderable augmentation in the receipt from the sale of tobacco (a Government monopoly), but that proves that the French disburse in an idle, if not a pernicious luxury, an enormous sum, which could certainly be better employed, both for smokers individually and for the community at large. The increase in the item of foreign sugar, too, goes for little in regard to the falling off in the Customs duties on imports and exports, and in the duties on the manufacture of native sugar. The increase in the stamp duties, and in the Post Office revenue is, however, satisfactory; so, likewise, is that on salt. It will be noticed that a new tax on securities and articles of value sent through the Post Office came into operation at the beginning of the present year, and that the yield of it in the first quarter has not been unimportant.

The following is a detailed account of the indirect taxes:—

	First Quarter of—		
	1858.	1859.	1860.
	f	f	f
Registration and mortgage duties	74,253,000	68,283,000	74,339,000
Stamp duties	14,487,000	13,748,000	14,830.000
Customs duties on the Import of — Grain	104,000	641,000	203,000
Customs duties on the Import of — Different sorts of merchandise.	25,649,000	26,164,000	22,392,000
Customs duties on the Import of — Colonial sugar	6,924,000	8,742,000	8,013,000
Customs duties on the Import of — Foreign sugar	6,116,000	6,444,000	7,738,000
Customs duties on exports	649,000	985,000	614,000
Navagation duties	660,000	801,000	873,000
Various Customs duties and receipts	422,000	431,000	434,000
Tax on salt in the Customs districts	6,224,000	6,406,000	6,696,000
Duties on wine, &c.	38,004,000	42,560,000	41,116,000
Taxes on salt levied beyond the Customs districts	1,825,000	2,143,000	2,127,000
Duties on the manufacture of native sugar	16,872,000	12,868,000	12,426,000
Various duties and receipts	10,262,000	11,225,000	12,018,000
Receipts from the sale of tobacco	41,649,000	43,206,000	43,869,000
Receipts from the sale of gunpowder	2,145,000	1,876,000	1,854,000
Post Office	12,420,000	12,632,000	13,536,000
Duty of 2 per cent. on money orders	435,000	443,000	460,000
Duty of 10 per cent. on securities and articles of value sent through the Post Office	...	...	111,000
Transit duty on foreign mails	...	...	...
Various receipts	6,000	6,000	13,000
Totals	261,106,000	259,604,000	263,162,000

The monthly Customs returns have just been brought out; and they show how much imports and exports have been affected by the coming commercial changes, combined with the prevailing political distrust. In March last the import duties were only 11,497,413f; whilst in the corresponding month of last year they were 15,578,610f, and in that of 1858, 14,951,043f. For the first three months of the present year, these duties were 38,345,834f; but in the same period of last year they were 41,990,689f, and in that of the year before, 40,793,299f. The following table will show the quantity of different articles imported for consumption; the items of cocoa, coffee, sugar, cotton, wool, coal and iron, will be specially noticed:—

	Three months of 1860.	Three months of 1859.	Three months of 1858.
Oxen and sheep ....head	82370	91051	64874
Wines ....hectolitres	42825	30161	33508
Brandies	9433	4537	8324
Alcohol (3-6)	4014	35	5685
Cocoa ....quintals	8663	10695	9072
Coffee	58071	72932	76554
Grain	72343		
Flour	238	523037	582746
Cotton	173102	246031	210318
Hemp	12383	12772	14274
Flax and hemp yarn	4466	1867	1475
Oleaginous seeds	247366	208875	182524
Tallow	1588	2880	11613

The retail dealers in cotton and woollen fabrics at Paris are petitioning the Government to establish an office for measuring the pieces sent up by the manufacturers; experience having demonstrated that all pieces nominally of 100 metres are really only of 98 or 96, or even less. The Parisian jewellers—their trade is very important one in this city—also contemplate representing in a petition to the Government, that if they be not allowed to make articles in gold of a lower standard than at present, they will derive no advantage from the treaty with England, inasmuch as English, German, and Swiss makers can pillage their models (in which they excel), and, by making articles of an inferior standard, undersell them in the English market. In France, it appears, jewellers are compelled by law to employ 18 carats of gold in an article in which an English, Swiss, or German jeweller would only employ 14, or even 11.

The London correspondent of the *Independance* of Brussels does not act fairly by the Economist:—he constantly borrows its information without ever making any acknowledgment. Some weeks back the Economist gave before any other newspaper, whether English or Continental, the principal points of the treaty of commerce between England and France; and the said correspondent not only took them without ceremony, but intimated that he had obtained them exclusively from a high political source. In the last Paris letter of the Economist, there is an account of the increase which the public debt of France has undergone during the last few years, that account being taken from a proof sheet of an unpublised work, —Horn's "Annuaire du Credit Public pour 1860,"—which was exclusively communicated to the Economist:—the said correspondent translates the account almost literally, and intimates that he obtained it from "a house in the city!" He also takes the information contained in the letter from Brussels in your last number, and communicates it to the *Independance* as his own.

A subscription has been opened under the auspices of the "Société Generale de Credit Industriel et Commercial," for 70,000 shares of 500f each of the "Royal Company of Portuguese Railways;" and as the enterprise is considered a good one, and is patronised by some influential persons, the subscription has obtained, it is said, marked success. The lines to be executed go from Lisbon to the Spanish frontier near Badajoz, and from Lisbon to Oporto, and are 300 miles long. The Portuguese Government is to give a large subvention. A subscription is also now open for 20,000 shares in the Seville, Xeres, and Cadiz Railway; and MM. Guilhon and Co., bankers, and the General Company of Credit in Spain *guarantee* an average interest of nearly 7½ per cent. up to the end of 1865 to subscribers.

The following are the quotations of the Bourse:—

The following is an account of the markets:—

Flour.—At *Paris*, during the week ending yesterday, business was somewhat more active; and yesterday superior sorts were at 57f to 57f 50c the sack of 159 kilogs; good, 55f to 56f; ordinary, 53f to 54f; and ordinary in store, 51f to 52f. The four marks have advanced, and were yesterday at 56f 50c for the current month; May, 57f 25c; June 58f; July and August, 60f. Last evening, however, the current month fell to 56f, and May, 56f 75c, and even 56f 50c.

Wheat was in more demand at *Paris* yesterday, and prices rose, inferior sorts being 34f to 35f the sack of 120 kilogs, and ordinary, 32f 50c to 33f 50c. Of the provincial markets, as many as 89 present a rise of 9c to 1f 50c the hectolitre, and only 9 a fall of from 9c to 80c. 36 other markets have undergone no change

Cotton.—At *Havre*, in the week ending Friday, business was not active, the total sales having only been 4,542 bales. The brokers left the closing prices of the week the same as those of the week preceding, low New Orleans being 99f the 50 kilogs; and very ordinary ditto, 106f. This week the demand has been somewhat active, but yesterday the quotation of low New Orleans was 98f.

Sugar.—At *Havre*, in the week ending Friday, business was insignificant: 30 casks French West India disposable went at 62f the 50 kilogs duty paid; 69 ditto, for delivery, 62f to 63f; and 100 ditto "usine" disposable, 63f. The arrivals were not considerable. This week sales have not been very numerous; they have consisted in small lots of French West India at 62f. At *Bordeaux*, last week, there was no demand for Reunion; a small lot of French West India went at prices not stated. Quotations were nominally: French West India, 62f; Reunion, 62f 50c to 63f 50c; Mauritius, 71f to 73f; Havana, 34f to 34f 50c. This week a small lot of French West India "usine" has been sold—part at 76f, part at 79f. At *Nantes*, last week, nothing was done, and quotations were nominally: Reunion, 63f; Mauritius, 66f in bond; Havana, 37f. This week there have been no sales. At *Marseilles*, last week, 4,800 bales Reunion were sold at 62f.

Coffee.—Business, at the beginning of the week, at *Havre*, was very calm, but was more active at the close. The total sales were 2,830 sacks Rio, not washed, disposable at 73f 50c to 79f the 50 kilogs in bond, according to quality; 5,000 sacks ditto, for delivery, 75f 25c to 75f 50c; 180 sacks Rio, washed, disposable at 81f to 89f; 61 sacks Porto Cabello, 91f 50c. In addition, about 1,800 sacks damaged of different sorts were sold. This week, there have been numerous sales: Hayti, 79f; ditto Cape, 81f; Gonaives, 82f; Santos, 77f; Rio, 75f to 76f 50c. At *Bordeaux*, last week, scarcely anything was done, and the importations consisted solely of a very small lot of French West India. This week, only a very small lot has been sold, and the price is not stated. At *Nantes*, last week, nothing was done; neither has there been any business this week. At *Marseilles*, last week, between 300 and 400 sacks Brazil were sold at 73f to 75f.

Indigo.—At *Havre*, in the week ending Friday, the demand was languishing: only 24 cases Bengal were sold, and the prices of them is not stated. Some sales of Bengal and Java have been made this week, but the prices are not given. At *Bordeaux*, last week, 24 cases Bengal were sold, but no prices were mentioned. No sales of importance have been made this week.

Hides.—The sales at *Havre*, in the week ending Friday, were not important: they were only 3,100 dry La Plata in six lots at 152f 50c to 160f the 50 kilogs duty paid, 119 Santo Domingo dry salted 77f 53c, Some lots of damaged were also sold. The arrivals exceeded 7,000. This week sales have been small: Rio Grande dry, 150f duty paid; Buenos Ayres dry ox, 161f 25c.

Tallow.—As has been the case for a long time past, there were at *Havre*, last week, neither sales nor arrivals. This week nothing has been done. At *Paris*, yesterday, the quotation was 135f 75c the 100 kilogs; a fall of 1f on last week's prices.

Wool.—The sales at *Havre*, in the week ending Friday, were 43 bales Monte Video, unwashed, at 2f 50c the kilog in bond; 16 bales Alpaca at 5f 75c; 25 bales sheepskins La Plata, unwashed, 1f 17½c to 1f 50c. There have been no sales this week.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. was 107f the hectolitre; Montpelier of 86 deg., 135f. At *Bordeaux*, the day before, 3-6 Languedoc was 135f; and beetroot, first quality, 105f.

Vienna, April 14.

The subscription to the new Austrian loan will decidedly not exceed 75,000,000 florins at the outside. Considering that 200,000,000 florins were demanded, this result is most mortifying to the Government. Most of the subscriptions made are by public companies, or private bankers, who dare not offend the Government by refusing; that is to say, the subscriptions are virtually compulsory. The Crédit Mobilier has taken 7,500,000 florins; Messrs Rothschild 3,500,000 florins; the Lombardo-Venetian Railway, 2,500,000 florins; the Franco-Austrian, 2,000,000 florins; the Ferdinand, 1,500,000 florins; the Municipality of Vienna 1,000,000 florins, and so on.

Berlin, April 16.

It is stated in a journal of this city, of some authority in commercial matters, that the reports which have latterly been current, as to the negotiation of a treaty of commerce between France and the Zollverein, are unfounded. The journal says that France, having given up the prohibitive system, has so little to offer the Zollverein that it is not worth the while of the latter to bargain with her; and that, besides, the Zollverein can, under the English treaty, send through England into France as much merchandise as it pleases, and on the same terms as English goods. The journal asserts, but whether truly or not I cannot tell, that most of the productions of the Zollverein, and especially fabrics in which silk is partially employed, knitted articles, hides, articles in metal, cutlery, needles, tools in iron and steel, and articles in wood, can be sold in England "much cheaper" than English; and that, consequently, they can hope to find a market in France under the English treaty (no certificate of origin being required), notwithstanding the expenses of carriage, commission, &c., to which their introduction, *via* England, would subject them.

Correspondence.

THE RIGHT HON. SIR CHARLES WOOD, BART., M.P., VERSUS THE RIGHT HON. JAMES WILSON, M.P.

TO THE EDITOR OF THE ECONOMIST.

Sir,—In the correspondence between these right honourable gentlemen on the Indian Currency Scheme, proposed by Mr Wilson, we find the advocate and the opponent of the Act of 1844 fairly at issue upon the principles of a sound system of currency,—Sir C. Wood contending for the application of the principles of restriction imposed on paper money by the Act of 1844, and Mr Wilson throwing them overboard. Which of them is in the right, and which will have to give way to the other, are questions of great interest to the public, who as the jury will have to try and decide.

Mr Wilson, in paragraph 13 of his Minute, says:—

"By maintaining at all times a fixed proportion of silver to the amount of notes in circulation, and convertible public securities for the remainder, not only is the *immediate convertibility* of any probable portion of notes likely to be presented provided for, and the ultimate payment of the whole specially secured, but a *natural and self-acting limit* is placed upon the amount of the circulation, *a limit which would expand and contract, according to the wants of the community, in the same manner, and to the same extent, as a purely silver currency would do.*"

Sir Charles Wood, in his rejoinder, denies that the immediate con-

vertibility of notes into bullion will ensure a natural and self-actin g limit, and says:—

Par. 13.—"The sound principle for regulating the issue of a paper circulation, is that which was enforced on the Bank of England by the Act of 1844, i. e., that the amount of notes issued on Government securities should be maintained at a fixed sum within the limit of the smallest amount which experience has proved to be necessary for the monetary transactions of the country; and that any further amount of notes should be issued on coin or bullion, and should vary with the amount of the reserve of specie in the Bank, according to the wants and demands of the public."

If this principle be sound, then are the principles of free trade unsound, and should be superseded by restrictions on all other trades as well as on that of money. This "sound principle" ensures a constantly diminishing quantity of currency for the wants of an ever-increasing commerce, inasmuch as the quantity of notes issued by the Bank of England against securities is a fixed quantity and cannot be increased, and those issued by country banks are subject to diminution in quantity, for when their issue ceases from any cause whatever, the vacuum can only be filled up to the extent of two-thirds of the amount by the Bank of England. Thus, were the present aggregate amount of about 17,000,000*l* to be in the course of time withdrawn, only about 11,000,000*l* could be issued by the Bank of England as substitutes.

This vaunted principle, therefore, makes the unlimitable increase of our commerce dependent on the accidental and fluctuating amount of gold for the supply of the medium of exchange for carrying it on; it seeks to regulate the quantity of money, not according to the wants and demand of the public, but according to the ebb and flow of gold in the coffers of the Bank. Hence, naturally the monetary panics of 1847, 1857, and 1859, and the constant apprehension of their recurrence. On Mr Wilson's plan, any person taking silver bullion to the Bank can obtain Government notes in exchange, or taking notes can have bullion in exchange, but power is given to the Commissioners to sell and invest two-thirds of the amount of the bullion in Government securities, so that the only limit to the issue of notes is the maintaining the proportion of one-third of bullion to the whole issue.

This plan takes care of the quality of the currency, but leaves the quantity to take care of itself; it is free trade in a sound currency, a principle for which we have been long contending.

Is not the time arrived for acting on the same principle here, by establishing a national bank of issue, where all can have as many national notes payable in gold on demand as they may want, on depositing one-third of the amount in gold and two-thirds in Government securities; and which notes, when no longer wanted, could be returned and the deposit recovered? Should not an end be put to the squabbling for notes between the great money-dealers, the discount houses and the Bank of England (a dispute highly prejudicial to the commercial community from the artificial absorption of money which it creates), by allowing the public, whose agents they are, to have an unrestricted and natural supply of a perfectly convertible paper medium of exchange? The mischief is owing not so much to the Directors of the Bank of England, as to the restrictive clauses of the Act of 1844 by which they are fettered.

Is it consistent for this country, the commercial mistress of the world, to sanction opposite principles of currency at home and in her dependencies,—to permit free trade in a sound currency in India, and to impose restrictions on the currency in Great Britain and Ireland?—I am, Sir, your obedient servant, HAMER STANSFELD.

The Grange, Burley, near Otley, April 14, 1860.

COMMERCIAL AND MISCELLANEOUS NEWS.

The commercial advices from New York report forced sales of French and German manufactured goods at a great sacrifice; otherwise the trade of the port was healthy, and a large business was looked for in the season. The chief glut on the market was of dress goods. The exports to Europe were small. A statement of the trade inwards and outwards for the first three months of the year gives the following result:—

	1858.		1859.		1860.
	IMPORTS.				
	dols.		dols.		dols.
Dry goods	1,360,641	.....	594,274	.....	1,497,479
General merchandise	2,357,824	.....	2,741,315	.....	3,123,893
Total for March	3,718,465	.....	3,335,589	.....	4,621,363

	EXPORTS EXCLUSIVE OF SPECIE.				
	1858.		185		1860.
	dols.		dols.		dols.
Since January 1	13,891,210	.....	13,273,268	.....	18,777,960
	EXPORTS OF SPECIE.				
	1858.		1859.		1860.
	dols.		dols		dols.
Since January 1	10,161,726	.....	8,684,254	.....	3,847,587

The number of banks and branches on the 1st of January throughout the United States, according to the returns of the Treasury Department, was 1,562; the capital paid in 421,880,000 dols, and the amount of specie on hand 83,994,000 dols. The resources of these banks, including loans, notes, securities, and real estate, is stated at nearly one thousand millions, and their liabilities five hundred and thirty-one millions.

The following commercial intelligence is dated Bombay, March 26:—During the fortnight which has elapsed since the date of our last advice the money market has become much easier, and there has been a considerable improvement in the demand for cotton piece goods twist also having advanced in value, though little business has been done. Metals generally, on the other hand, have been less easy to place, and considerable arrivals of copper have caused a reduction in the value of manufactured kinds. Imports have been in more demand, and the prices of cotton and oilseeds have advanced considerably, partly in consequence of lower freights, which are now, however, rising again. The money market has been gradually assuming an easier aspect, and the Bank's rates of discount were reduced 1 per cent. on the 15th and 1 per cent. on the 22nd inst., leaving them at 7 per cent. for cash credits under Government securities, and 8 per cent. for commercial bills at short date. Government securities have been in demand, and the prices gradually advanced until the 22nd inst., when the receipt of a telegram with intelligence to the 3rd from London checked the improvement. The market, however, is firm at our closing figures of 85½ for Four, 97½ for Five, and 103½ for Five-and-a-Half per Cent. paper, being 1 to 1½ per cent. better than our last quotations.

Total	1,363,160,372 59	1,382,662,378 82	1,283,181,273 80

We (*The Bi-Monthly Observer*), have obtained a summary of the trad of Ceylon for 1859, which we are able to compare with the figures for 1857 and 1858 previously obtained. It appears that, deducting specie and bullion, the value of our imports has risen from 1,946,539*l* in 1857, to 2,314,707*l* in 1859. In the same period the value of our exports has slightly decreased, having fallen from 2,253,381*l* in 1857, to 2,160,502*l* in 1859. The total value of goods imported and exported in 1859 was:—

	£
Imports	2,314,707
Exports	2,160,502
	4,475,209
Add specie imported	1,150,780
Add specie exported	364,249
Total	5,999,238

or in round numbers six millions sterling, our population being under two millions. The bulk of our import and export trade has been, of course, with Great Britain and British possessions in India; British colonies (save Australia in the matter of specie) not telling for much. To France our exports are large, the imports being trifling. In the case of French possessions in India it is the very reverse. With Holland and the United States we have some export trade; while we import considerably from the Maldive islands. The value of our exports to France (chiefly native coffee) fell from 342,000*l* in 1857 to 143,000*l* in 1859.

A return relating to the operations of the Mint has just been issued. The number of sovereigns coined in 1859 were 1,547,603; of half-sovereigns, 2,203,813, a greater number than those for the former year, when 803,234 sovereigns and 855,578 half-sovereigns were coined. The total value of all the gold coinage manufactured at the Mint during the last 10 years was 54,490,265*l*. The number of florins coined in 1859 was 2,568,060; of shillings, 4,561,920; of sixpences, 4,688,640; of fourpences, 4,158; of threepences, 3,584,328; of silver twopences, 4,752 and of silver pence, 7,920. In copper the coinage was as follows:—1,075,200 pence, 1,290,240 half-pence, and 1,290,240 farthings. Half-farthings have not been coined since 1856.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria. cap. 32, for the week ending on Wednesday, the 18th day of April, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,365,225	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	13,890,225
		Silver Bullion	...
	28,365,225		28,365,225

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,728,943
Rest	3,211,759	Other Securities	22,790,338
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	5,838,581	Notes	6,548,560
Other Deposits	15,512,425	Gold and Silver Coin	734,461
Seven Day and other Bills	686,537		
	39,802,302		39,802,302

Dated the 19th April, 1860. W. MILLER, Deputy Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,503,202	Securities	32,441,281
Public Deposits	5,838,581	Coin and Bullion	14,624,686
Private Deposits	15,512,425		
	43,854,208		47,065,967

The balance of Assets above Liabilities being 3,211,759*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£1,669,882
A DECREASE of Public Deposits of	39,554
An INCREASE of Other Deposits of	941,708
No change in the amount of Government Securities.	
A DECREASE of Other Securities of	744,050
A DECREASE of Bullion of	12,416
An INCREASE of Rest of	11,262
An INCREASE of Reserve of	1,638,174

The large increase in the reserve, following the still heavier decrease in the previous return, shows the effect of the restoration to the Bank of the million and a half of notes which were withdrawn from the establishment last week by an eminent discount firm. The increase in the private deposits and the decrease in the circulation are attributable to the same cause. The decrease in the private securities forms a satisfactory feature.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,494,075	£ 20,496 731	£ 21.393,488	£ 22,810,347	£ 22,503,202
Public deposits	4,627,318	4,851,404	3,324.285	5,079,902	5,838,581
Other deposits	10,946,342	10,663,410	16,007,987	15,121,365	15,512,425
Government securities	14,292,170	11,133,126	9,869,853	11,371,118	9,728,943
Other securities	9,779 210	18,404,357	15,515,090	16,808,520	22,790,338
Reserve of notes & coin	10,294,161	4,346,004	12,541,363	10,523,985	7,283,021
Coin and bullion	16,629,601	9,605,740	18,584,383	18,051,375	14,624,686
Bank rate of discount	2½ p. c.	6½ p. c.	3 p. c.	2½ p. c.	5 p. c.
Price of Consols	96	93¼	96⅝	94⅛	94⅞
Average price of wheat	37s 10d	53s 0d	43s 2d	41s 2d	49s 1d
Exchange on Paris (shrt)	25 55 60	25 25 30	25 7½ 12½	25 2½ 7½	25 15 20
— Amsterdam ditto	13 3½	11 16½	11 14½ 15	11 14 15	11 14½ 15
— Hamburg (3months)	13 13	13 8½	13 6 6½	13 5½	13 5½ 6

At the corresponding period of the year 1850, the Pope, having issued an amnesty, had at length re-entered Rome. Between the public apprehension of socialism, on the one hand, and of an Imperial *coup d'état* on the other, the funds in France were falling. Here, the money market was in a glutted state. The foreign exchanges were remarkably high, owing partly to the transmission from the Continent of large sums for investment and safe custody in this country. The languor of trade is indicated by the small amount of the "other" securities in the Bank.

In 1857, the Bank of France were still buying gold here, and the money market was very tight. 7 per cent. was paid in the Stock Exchange for short loans on English Government securities. The great Russian railway scheme had been brought forward, but had been received with indifference by the public.

In 1858, the features immediately exciting attention in the political world were the complications arising out of the seizure of the Sardinian steamer, Cagliari, by the Neapolitan Government, and the dismissal, by high authority, of M. Renée from his post as political director of the *Constitutionnel*, in consequence of the appearance of an article insulting to England. The Bank of England rate of discount was maintained at 3 per cent., although the best bills were taken elsewhere at 2¼.

In 1859, great confusion had been occasioned in monetary circles by the news of the threat of an immediate declaration of war by Austria against Sardinia. The Paris Bourse indicated extreme alarm. The adjudication of the last Indian Debenture Loan of 7,000,000*l* had just taken place. The Government reserved price was 95 per cent., at or above which 5,077,000*l* was taken.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 1,167,132*l*; in 1857, a deficiency of 7.740,947*l*; in 1858, an excess of 492,897*l*; and in 1859, a deficiency of 1,687,215*l*. In 1860, the deficiency is 7,277,913*l*.

The money market last week was chiefly affected by the withdrawal from the Bank of a million and a half of notes by a well-known discount firm, as alluded to in our last impression. This withdrawal was probably the immediate cause of the advance in the Bank rate of discount to 5 per cent. on last Thursday week. During the present week the money market has been principally influenced by the explanations afforded on the subject, and by the return of the notes to the Bank. Perceiving that some of the disturbing causes were of an exceptional and temporary character, holders of money have shown more disposition to take advantage of the high rates now current. The market is decidedly easier. There is still, however, sufficient hesitation to cause long engagements to be avoided as much as possible. Last week the rates of discount in nearly all quarters were above those of the Bank. This week, choice bills having not more than a month or six weeks to run, are negotiable at the Bank minimum, or even at 4¾ per cent. The supply of money has sensibly increased. For four months' paper, nevertheless, 5½ per cent. is the nearest quotation, whilst for six months' 6 per cent. is asked.

The tendency to ease in the money market would probably have been more clearly shown but for the liability to provide the heavy sum of 2,650,000*l* on the 30th inst. on the Victoria Government Loan. There is, of course, no prospect whatever of any such anomaly occurring as would be involved in the export of gold to the great gold-producing colony. The money will, doubtless, be partly applied to meeting the requirements of the Government of the colony, chiefly connected with railway purposes, in this country. But the present remittance of debentures constitutes a liquidation of a proportionate amount of debt due by the colony to the mother country. It may be fairly said that Australia has now sent us some millions of debentures in lieu of gold, just as America is sending us millions worth of cotton in lieu of gold. These considerations have an important bearing upon the position of our reserves of the precious metal. It is also evident that so large a sum as 2,650,000*l* cannot be transferred in a mass from the hands of one set of holders to those of another without disturbing the ordinary current in the market.

Meanwhile, it is satisfactory to remark that the relatively higher value of money here has had its natural action upon the Continental exchanges, and has caused a stoppage of the usual demand for gold for exportation. It is probable that any supplies which may come to hand will be carried at once to the Bank of England. A sum of 95,000*l* in Australian gold was sent into that establishment on Wednesday.

The arrivals of specie and bullion this week have comprised 129,000*l* from Melbourne, 23,000*l* from the United States, and 11,000*l* from Africa. The steamer Ceylon took this day 526,395*l* in specie and bullion (viz., 62,937*l*-gold, and 463,458*l* silver) for Calcutta and China. The amount would not have been by any means so large had it not been for the recent arrival of a very large amount of dollars from Mexico, which were offered at a considerable reduction from previous prices.

Several Australian gold ships are now overdue. The Copenhagen, with 157,000*l*, has been at sea 116 days; the Greyhound, with 20,000*l*, 94 days; the Monarch, Norwood, and Ocean Chief, with a total of 285,000*l*, 87 days; the Montmorency, with 36,000*l*, 83 days; the Lightning,

with 54,000*l*, 72 days; and the Lincolnshire, with 87,000*l*, 71 days.

In the Stock Exchange, the supply of money is abundant, and the rates for short loans on English Government securities do not exceed 2 to 3 per cent.

On Tuesday, the foreign exchanges were very firm; but this afternoon, the pressure in the money market, which previously drove the exchanges up, having subsided, some indications of a partial reaction were observable. The rates for bills on Hamburg, Paris, and St Petersburg were quoted somewhat less favourably than on last Friday.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day :—

Gold.—The Suffolk has arrived from Melbourne with 129,000*l*, but the demand for export having materially decreased, a large portion of this (95,000*l*) has been sent into the Bank of England, and other sums will doubtless soon follow. The total amount now on the way from Australia is 632,000*l*, the greater proportion of this may be considered as due, and is hourly expected. The Ethiope from Africa has brought 11,000*l*, and the City of Manchester from New York has 23,000*l*; and these sums, together with a small amount by the Tasmanian from the West Indies, have been taken for the Continent. The Tagus has taken 427*l* to the Peninsula; the Atrato 400*l* to the West Indies; and the Ceylon, to sail the 20th instant, takes 12,938*l* to Madras and 50,000*l* to Malta, all in sovereigns. The latter amount is sent by Government.

Silver.—The silver ex Parana and Tasmanian has been sold at 5s 1⅛d per oz standard, being a further decline. The steamer Ceylon takes out nearly 200 000*l* in silver bars to Calcutta. The Sultan has brought 3,300*l* from the Peninsula, and the Indus 2,600*l* from Alexandria.

Mexican Dollars.—A large amount of dollars have been shipped for China, by the mail of the 20th inst., and Government have made a remittance of 103,500*l* by the same opportunity; the price which was 5s 2⅛d per oz is now slightly lower, with not much demand.

The Teutonia from New York brought 42,000*l*; nearly the whole of which consisted of Mexican dollars.

Exchange on Bombay and Calcutta for 60 days' sight Bank drafts is 2s to 2s 0⅛d. Madras, 2s. Bills with documents on the two former places 1s 11⅛d to 1s 11⅜d.

India Government Loan Notes have been more in demand yesterday and to-day, and the tone of the market is decidedly better than at the date of our last; prices, however, have not advanced much, and we quote them 103¾ to 104 for 5½ per Cents., 98 to 98½ for 5 per Cents., with buyers at the lower quotations. Money generally has been easier since the beginning of the week, and a better market is now looked for, supposing money should become plentiful.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, fine, 78s per oz std; bar gold, refinable, 78s 1d per oz std; Silver—Bar silver, 5s 1⅝d per oz std, last price; bar silver, containing 5 grs of gold, 5s 1⅞d per oz std, last price; fine cake silver, 5s 6⅛d per oz, last price; Mexican dollars, 5s 2⅛d per oz; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11¾d to 4s 11⅞d per oz.

The supplemental adjudication of the Victoria Government 6 per Cent. Loan took place on Tuesday, when an amount of 1,078,000*l* (forming part of the 2,650,000*l* offered on the previous Wednesday) was submitted. It had transpired that the Committee's minimum was 105 per cent. The result proves how much better adapted to the public taste is the plan of offering securities at a fixed price, than that of inviting subscribers to tender in the dark. The total applied for upon this second occasion was no less than 1,451,900*l*. One tender was at 106*l*, and the average price was 105*l* 2s 6d. The amount applied for at 105*l* was 305,600*l*, but the whole of these bids were rejected. The tenders accepted were those between 105*l* 0s 6d and 106*l*; whilst as regards those *at* 105*l* 0s 6d, the new tenderers got none, the allotment being confined, in the proportion of about four-fifths of the amount applied for, to the persons who had been successful bidders on the previous Wednesday, and to whom a preference was judiciously given upon the second occasion. Although the price now current for the Debentures is 5 per cent. below that quoted a few weeks ago, the colonists have reason to be satisfied with the result of the transaction, considering the state of our money market. The comparatively low price at which the loan has been placed may also be regarded with satisfaction from two points of view affecting ourselves—firstly, as holding out to the English subscribers that fair prospect of profit without which no loan, foreign or colonial, ought to be taken up here; and, secondly, as being calculated to disabuse the colonists' minds of the dangerous idea that the home market is prepared to absorb at a high price any amount of securities that they may be pleased to create.

The price of the new Debentures this week has experienced little variation. The closing quotation this afternoon was 105¼ to ½. The tendency to improvement is checked by realisations by persons who subscribed merely with a view to snatch a quick profit.

Messrs Taylor and Pears, of Great Tower street, Staffordshire ware merchants, have suspended payment this week. Their debtors are understood to be chiefly houses in the United States. The amount involved is not large.

We learn with regret that misappropriation of money to a considerable amount has been committed by the chief cashier of the Union Bank of London, Mr William George Pullinger. The accused was given into custody this afternoon on a charge of having misappropriated a sum of 360*l*. This is only one of a series of charges of a similar character. An investigation has been at once instituted by the Committee.

At the meeting of the Oriental Bank Corporation yesterday, a dividend of 5 per cent. for the last six months of 1859, and a bonus of 7 per cent., were declared, making a distribution of 17 per cent. for the year.

The prospectus of M. Salamanca's Portuguese Railway Company has been issued in the markets of London, Paris, Madrid, and Lisbon. The share capital is fixed at 35,000,000f, or 1,400,000*l* sterling. The lines to be constructed are—1, from Lisbon to the Spanish frontier, near Badajoz; and, 2, from Lisbon to Oporto. The total length of the two is 298 miles. Eight per cent. per annum interest is to be paid on calls during construction, of which two per cent. is receivable from M. de Salamanca.

Another new undertaking is the Hull West Dock Company. This undertaking is stated to have met with very strong support at Hull, where the shares of the old Dock Company command an enormous price. The trade of the port is sufficiently large and extending to justify fully the proposed work. The capital is fixed at 400,000*l*, of which it is stated that a large amount has already been placed.

Captain John Vine Hall was to-day appointed commander of the Great Eastern. Captain Hall has commanded steamers belonging to the General Screw Company, and is a man of energy and ability.

At Paris, to-day (Friday), the 3 per Cent. Rentes closed at 70.05, both for money and the account, showing in the latter instance a decline of ⅛ per cent. since yesterday. Compared with last Friday's rates, there is also a reduction of ⅛ per cent. Very little business is going forward on the Bourse at present.

The English funds have been strengthened by the subsidence of the tightness in the money market. There is also a less uneasy feeling with regard to the immediate prospects of politics on the Continent, now that the fate of Savoy and Nice has been sealed, and that the French Government has consented to refer to a Conference of the Powers of Europe the questions connected with the position of Switzerland. Consols attained an extreme rise of ⅝ per cent., reaching, yesterday morning, 95 to ½ for the 9th of May. A partial relapse took place to-day, the closing quotations being 94¾ to ⅞ for money, and 94⅞ for the account; but, compared with last Friday's rates, a rise of nearly ¼ per cent. is shown. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :—

The market for British railway stocks has experienced several variations. In the early part of the week the tendency of prices was upwards, but yesterday and to-day drooping. The recent extraordinary rise seems to have tempted a few holders to realise, but the principal supply is derived from speculative quarters, where stock had been purchased upon borrowed money. The state of the money market has naturally caused some of these loans to be called in, unless at much higher terms. Against this supply of stock must be set the continued investments by the public. To-day's closing quotations, compared with those of last Friday, show a rise of 1 per cent. in Brighton stock, ¾ per cent. in Lancashire and Yorkshire, ½ per cent. in Great Western, and ¼ per cent. in Berwick and York and North Midland; a decline of ½ per cent. in Midland, and ¼ per cent. in South-Eastern; and little alteration in other descriptions. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.19 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 1-10th per cent. dearer in London than in Paris.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 108⅞ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

The Commercial Times.

LETTERS FOR TUSCANY AND THE ROMAGNA.—According to a communication which has been received from the Sardinian post office, all the regulations and rates of postage in force in the Kingdom of Sardinia have been extended to Tuscany and the Romagna. Letters, newspapers, and other printed papers, addressed to Tuscany and the Romagna will, therefore, in future, be forwarded via France, in the mails for Sardinia, and will be subject in all respects to the rates of postage and general regulations applicable to correspondence addressed to Sardinia. Registered Letters.—Any letters for Tuscany and the Romagna which the senders may desire to register, will be chargeable with the reduced registration fee of sixpence, instead of elevenpence as heretofore. The following are some of the principal places in the Romagna:—Bologna, Castel Bolognese, Castiglione, Comacchio, Ferrara, Forli, Imola, Ravenna, and Rimini.

EARLIER DEPARTURE OF THE DAY MAIL TO FRANCE.—On the 1st May next, and thenceforward, the day mail to France will be despatched from the London bridge station at 6.55 a.m., instead of 1.30 p.m., as at present, and it will arrive in Paris in time for the letters addressed to that city to be delivered the same evening, and for the correspondence for places beyond Paris to be forwarded by the night mails. The following are the regulations under which letters, newspapers, and other printed, papers addressed to France, or intended to be forwarded through France, may be posted on and after the date mentioned, for transmission by the day mail:—At any of the ordinary receiving offices, up to 9 o'clock the previous evening; at the district offices, and at the branch offices at Charing cross and Lombard street, as well as at the pillar letter boxes in the town districts, up to 5 o'clock on the morning of despatch; at the Chief office, St Martin's-le-Grand, up to 6.30 a.m.; at the Foreign post office (adjoining the Continental parcels office) at the South-Eastern railway station, London bridge, up to 6.50 a.m. A corresponding alteration will be made in the arrangement for despatching the day mail from Paris; and this mail will be due in time for paid letters to be delivered in London the same evening, and for both paid and unpaid letters to be forwarded to the country by the night mails.

BOOK PACKETS TO HAMBURG, BREMEN, AND LUBECK BY PRIVATE SHIPS.—On the 1st May next, and thenceforward, book packets addressed to Hamburg, Bremen, or Lubeck, may be forwarded by private ships, either from London or Hull, at the following rates of postage:—Not exceeding 4 oz, 3d; above 4 oz and not exceeding 8 oz, 6d; above 8 oz and not exceeding 1 lb, 1s; above 1 lb and not exceeding 1½ lb, 1s 6d; every additional ½ lb or fraction of ½ lb, 6d. A book packet may contain any number of separate books or other publications, prints, or maps, and any quantity of paper, parchment, or vellum; and the books or other publications, prints, maps, &c., may either be printed, lithographed, written, or plain, or any mixture of the four. Further, all legitimate binding, mounting, or covering of a book, publication, &c., or of a portion thereof, will be allowed, whether such binding, &c., be loose or attached; as also rollers in the case of prints or maps, markers (whether of paper or otherwise) in the case of books; and, in short, whatever is necessary for the safe transmission of literary or artistic matter, or usually appertains thereto; but no patterns or books of patterns (unless consisting merely of paper) will be allowed. The following conditions must be observed:—1st. The entire postage must be prepaid. 2nd. Every book packet must be sent without a cover, or in a cover open at the ends or sides, so as to admit of the enclosures being removed for examination. 3rd. No book packet may contain any written letter, closed or open, or any enclosure sealed or otherwise closed against inspection; nor must there be any letter, nor any communication of the nature of a letter, written in any such packet, or in or upon its cover. 4th. No book packet must exceed two feet, British, in length, width, or depth. This arrangement is not to extend to or interfere with the transmission of printed papers allowed to pass by the post under the newspaper privilege, which will continue subject to the existing regulations.

MAILS ARRIVED.

Imports of the week ..... 115,240 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Although scarcely any English wheat was on offer at Mark lane, this morning, the demand for both red and white qualities ruled very inactive; indeed, so little business was transacted, that the quotations were almost nominal. The inquiry for consumption in Ireland appears to have subsided. Owing chiefly to a large influx from abroad,—nearly 23,000 quarters,—foreign wheat was very dull; nevertheless, there were no sellers, except at Monday's currency. The barley trade ruled steady, on former terms, and there was a fair demand for other kinds of produce, at full prices. The nominal top price of town-made flour was 46s per 280 lbs.

The imports of foreign produce, this week, amount to 22,990 quarters of wheat; 2,820 barley; 24,610 oats; and 310 sacks of flour. A large quantity of wheat is, we understand, in progress of shipment to this country from the Lower Baltic ports—in which the accumulation of stock is somewhat heavy—and the impression in various quarters is that that produce has seen its highest range for the present, even though very little grain is likely to reach us during the present year from the United States.

At Liverpool, this morning, wheat sold at 1d per 70 lbs more money, and all other articles were firm in price.

The latest advices from New York state that wheat was a slow inquiry, and somewhat cheaper. Flour, maize, and other articles, however, commanded very full prices. The supplies in warehouse were moderately extensive, but there was scarcely any demand for export purposes.

There has been again a fair inquiry in the Liverpool cotton market during the week, the total sales amounting to 59,000 bales, of which the trade have taken 45,000 bales, speculators 3,000, and exporters 11,000 bales; but notwithstanding the extent of the

business, the quantity offering is still so large and the demands of buyers are met so freely, that prices can with much difficulty be maintained. The better qualities are perhaps barely a quotation cheaper, but the lower descriptions can be purchased on easier terms. In the last two or three days, with the appearance of the money market being a shade easier, there has been decided activity in the market, but no improvement in prices can at present be established. Sales to-day fully 10,000 bales.

At New York, on the 5th instant, the cotton market was dull. In the three previous days the sales were only 3,500 bales, at 11⅛ cents for middling uplands. Our report from New Orleans to the 4th says:—"Cotton is unchanged; sales to-day 12,500 bales; sales yesterday 6,500 bales. Middling is quoted at 10½ cents to 11 cents. The business of the past three days has been 26,000 bales. Receipts of the three days 15,000 bales. The increased receipts at all the Southern ports, as compared with the same date last year, are now 767,000 bales."

Very little alteration has taken place of late in the state of the cotton market at Alexandria, where sales have been effected at the annexed rates free on board:—Very low to middling, 6.90d to 8.21d; barely good middling to fair, 8.25d to 9d; good fair to fine, 9.13d to 10.60d; Sea Island, 10.64d to 12.63d per lb. The total exports from October 19 to April 2 amounted to only 56,385 bales, against 70,636 in the previous twelve months.

Large public sales of tea have been held this week. The biddings, generally, have ruled heavy. China qualities have gone somewhat easier, and Assam parcels have fallen 2d to 6d per lb. In the private market, next to nothing has been passing.

No disposition has been shown to operate in any kind of raw sugar, and importers have been compelled to submit to a reduction in value of from 6d to 1s per cwt. Refined goods have ruled in favour of buyers, and floating cargoes have continued heavy.

The coffee trade has been tolerably healthy; but the transactions have not been to say extensive. Large supplies of cocoa have been brought forward; but only a small quantity has found buyers.

The rice market has continued firm as to price. The transactions, however, compared with the previous week, have been limited, although wheat was 2s per quarter dearer at Mark lane on Monday.

The demand for nearly all descriptions of wool still continues inactive, but without leading to any change in prices. The next public sales of colonial, in London, will commence on the 3rd of May. The imports since the close of last sales, together with the stock then remaining unsold, consist of the following:—4,934 bales Sydney, 17,655 bales Port Philip, 3,602 bales Tasmania, 10,101 bales Adelaide, 6,265 bales Cape; total, 42,557 bales. The Liverpool wool sales have commenced. The attendance of buyers has been extensive; nevertheless, Port Philip qualities have given way in price fully 1d per lb, compared with the closing rates of the last sales held in the metropolis. East India and foreign parcels have realised full quotations.

East India rum has sold to a moderate extent at about stationary prices; but other kinds have met a dull inquiry. Brandy is held at full quotations.

The saltpetre market has been devoid of animation, but we have no change to notice in value.

Most kinds of hemp have realised fully previous rates, with a fair demand. Flax, jute, and coir goods have changed hands slowly.

Iron has continued heavy, and Scotch pig has fallen to 53s 6d cash, mixed numbers. Tin has sold slowly at 129*l* for Straits. Spelter is quite as dear as last week.

We have very little change to notice in the value of oils, and the current value of linseed is 28*l*. Spirits of turpentine have realised 35s 6d to 36s per cwt.

The tallow market has been somewhat heavy, yet P. Y. C. on the spot has maintained its previous value of 56s 6d per cwt. The deliveries still continue on a very limited scale.

COTTON.

NEW YORK, April 3.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with closing prices, f.o.b., with freight in sterling at current exchange:—

		Sales.	Closing.		Middling.		Freights.		F.o.b.
New Orleans	April 2	74000	¼c lower	...	10¾c	...	9-16d equal to		6.11d
Mobile	Mar. 31	25000	—	...	10¾c	...	¼d	—	5.86d
Charleston	30	7000	unchanged	...	10¾c	...	7-16d	—	5.99d
Savannah	30	4000	—	...	10¾c	...	⅜d	—	5.93d
New York	April 3	4000	—	...	Upl. 11c	...	9-32d	—	5.93d
Total		114000 bales					Average		5.96d

There is now an excess in receipts of 742,000 bales over last year, when the crop reached 3,851,000, and of 1,560,000 bales over 1857-8 (crop 3,114,000 bales).

New York Market.—There is no improvement to report in this market. Business continues very languid; and with unsettled markets at the South, buyers show no disposition to operate. Prices have been irregular, particularly for the lower grades. The week's sales sum up about 4,500 bales, closing heavily at 11c for middling Uplands, while good ordinaries are offered at 8½ to 9¼c. Transitu operations have been very limited, and prices irregular.

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years:—

	Receipts. Week's Receipts. bales	Receipts. Since 1st Sept. bales	Exports for the Week. To Great Britain. bales	To France. bales	To other For. Pts. bales
1859-60	88000	4002000	72000	11000	17000
1858-59	75000	3260000	66000	4000	20000
1857-58	100000	2442000	82000	2000	10000
1856-57	41000	2622000	54000	13000	10000
1855-56	83000	2909000	66000	10000	18000
1854-55	92000	1995000	21000	5000	6000

	Exports Since First September. To Great Britain. bales	To France. bales	To other For. Pts. bales	Total. bales	Stock. bales
1859-60	1872000	478000	345000	2695000	969000
1858-59	1206000	342000	416000	1964000	817000
1857-58	1017000	276000	218000	1511000	780000
1856-57	1003000	323000	295000	1621000	537000
1855-56	1200000	365000	368000	1933000	653000
1854-55	984000	254000	173000	1411000	357000

Thus the receipts show an increase of 742,000 over those of last year, and an increase of 1,560,000 over 1857-58, and the exports exhibit the following results:—

	To G. Britain.	To France.	To other F.P.	Total.	Stock
Compared with last year	Inc. 666000	Inc. 136000	Dec. 71000	Inc. 731000	Inc. 152000
Compared with 1857-8	Inc. 855000	Inc. 202000	Inc. 127000	Inc. 1184000	Inc. 189000

Southern Markets by Telegraph.—The Southern markets have been irregular during the week under the recent dull advices from Liverpool. Sellers became anxious to realise, and a decline of ⅛c in the Gulf markets caused more activity in clean desirable cottons, while the low qualities have been nominal in value and almost unsaleable. At New Orleans the week's sales amount to 74,000 bales, closing on the basis of 10¾c for even running middling, and 10½c to 10⅝c for average lists. The Mobile market has shown a similar range of quotations for mixed lists, but good stapled middling is scare and cannot be bought under 10⅝c. The Atlantic markets have been quiet, with only a small business in each. Freights have receded to ⅛d at Mobile, but New Orleans has again advanced to 9-16d. Latest telegraphic quotations from each point, with price free on board with freight, will be found in our table above.

Crop.—There is still a diversity of opinion on the crop question. Those who yet believe in a sudden falling off in receipts expect the crop will stop at 4¼ millions, while the more general impression is that the decrease will be gradual, and the crop run beyond this figure. The course of receipts to latest telegraphic dates favours the latter view, but the question may be said to depend almost entirely on the receipts henceforward at New Orleans. The weekly deliveries there still show an excess over last year, but at all other points a decrease. The total by telegraph, including overland cotton to Eastern spinners, is now 4,137,000 bales. The average receipts of the past five years subsequent to this date were 530,000 bales; last year 490,000 bales; and year before, 605,000 bales.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by J. C. Ollerenshaw, Esq., of Manchester.*

The cotton market has been extremely languid throughout the past week. Business has been done almost daily in almost all qualities of American at 1-16d to ⅛d per lb below our last week's quotations, and yet in isolated cases the better grades have realised firm prices. There is great irregularity in the market, owing to the heavy supply pressing for sale. Quotations are reduced. Egyptians are again somewhat lower in the better descriptions. Brazils are very difficult of sale. East India are lower, and attract the attention of buyers from their cheapness. The sales to-day are 8,000 bales. The market continues heavy. The reported export amounts to 11,160 bales, consisting of 2,960 American, and 8,200 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Owing chiefly to the late advance in the value of money, and the dull accounts at hand, both from India and China, the business doing in goods in the manufacturing districts during the present week has been very limited in a comparative sense. In prices, however, very little change has taken place,—most of the mills are running full time,—and the stocks in warehouse continue very moderate. The iron trade has continued heavy, and the quotations have had a drooping tendency; but the demand for coals has been decidedly active.

MANCHESTER, April 19.—This market has been very tame and without feature. There has continued to be a moderate amount of inquiry for China, and for certain outside Eastern markets; but India goods, as a rule, have been without animation, though without essential change in price. The home trade has been exceedingly quiet. Transactions in yarns have been below the average, and scarcely in all cases at recent prices.

Bradford.—We have no improvement in the wool market; sales are upon the smallest scale, and buyers reluctantly pay the rates now current. In noils and shorts there is scarcely the same animation, but prices remain about the same. The demand for yarn is far from buoyant, and much below an average of former years. In the home trade the demand is steady, but both home and export buyers complain of the difficulty to obtain a profit upon the present high prices. There is less doing in pieces. The merchants are holding back, owing to the extreme coldness of the season. Spring goods are not selling, and the drapers are not open to replenish their stocks. The export houses buy very sparingly, and, as a whole, the market must be considered a flat one.——Leeds.—There has been a better demand for summer goods. The market may be considered an average one for the season. The woollen trade in general in this town and district is moderately steady, but the tone of business is not so buoyant as it lately was, and orders are given cautiously. The wool trade is quiet, but prices are firm.——Nottingham.—There have been a few orders executed this week for threads, muslins, and other cotton fabrics. Mechlin edgings are also in demand. Silk goods are in no more request than for some weeks past. In hosiery, many branches are quiet. Yarns are still high in price.——Leicester.—There is very little alteration to report in the state of the hosiery trade; business in some departments is quiet, but the trade generally is in a satisfactory condition, and hosiers are of opinion that the demand will soon improve. At Hinckly and other country districts there is a fair amount of business doing. Wools continue firm, and high prices are yet obtainable. There is no material change in the price of yarns.——Huddersfield.—Our market is still very quiet, and although there have been some large buyers about the Cloth Hall and the warehouses, the business done has hardly been an average one for this season.——Halifax.—Yarns and wools are steady in price, yet the demand is not actually brisk. The heavy goods trade is dull, the chief demand being for fancy productions. The carpet trade, take it in all its departments, is in fair condition, as is also the woollen trade.——Rochdale.—There is very little change in our wool market as to prices, and all transactions are limited to the supply for immediate necessities. Flannel—Most of our manufacturers are low in stocks, although for some weeks past we have had merely a sorting-up business going on. The Yorkshire trade is quiet, except in scourers.——Glasgow.—Prices for all classes of wool have remained unchanged. A steady consumption is going on, which is gradually lessening stocks. Laid and white Highlands are in fair request, and combing lots of first quality are wanted. Laid cross is inquired for, and well-managed clips are easily sold. There is hardly so much inquiry for laid Cheviots, but a good many lots have been sold within the last few days.——Dundee.—The market, generally, is firm as to price, but the business doing is very moderate.——Belfast.—Linens command previous rates. The demand, however, is less active. Yarns are quite as dear as last week.——Birmingham.—The present position of the iron trade is a disappointment to all who are engaged in it, so confidently had activity been anticipated at this season. The manufacturing trades in this quarter are in the enjoyment of a moderate amount of prosperity.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Nearly the whole of the local markets held this week have been very scantily supplied with home-grown wheat. For actual consumption, the demand for both red and white qualities has ruled steady, and prices have further advanced from 1s to 2s per quarter, and at which good clearances have been effected. At the outports, foreign wheat has commanded more attention, and the quotations have had an upward tendency. The barley trade has continued in a healthy state, at fully late currencies; but malt has moved off somewhat slowly. The demand for oats, beans, and peas has been rather active; nevertheless, no change has taken place in value. The flour trade has ruled active, and prices have advanced from 2s to 3s per 280 lbs.

Advices from all parts of the United Kingdom state that vegetation is unusually backward, and that the wheat plants are looking otherwise than healthy. The sowing of spring corn has been concluded in the whole of our forward counties.

The continental markets have continued steady for wheat, and, in most transactions, prices have advanced 1s to 2s per quarter, at which some large quantities have been disposed of for shipment to England. The stocks in the Lower Baltic ports have become somewhat heavy. In the United States, both wheat and flour have changed hands slowly—almost wholly for home consumption—yet scarcely any alteration has taken place in prices. The supplies now on passage to this country are very limited.

The Scotch markets have been fairly supplied with wheat, in which a steady business has been passing, on rather higher terms. All spring corn has moved off steadily, but without leading to any quotable change in value. Flour, however, has advanced quite 2s per sack.

In Ireland, there has been an improved feeling in the demand for wheat, at enhanced currencies. Other articles have sold at very full prices. The stocks of foreign grain in warehouse are seasonably extensive.

Only a limited quantity of English wheat was on sale here, to-day: nevertheless, the demand for all kinds ruled very inactive, at Monday's improvement in value. Foreign wheat, owing to large importations, was dull, but not cheaper. There was a good consumptive inquiry for spring corn and flour, at full quotations.

Mr Ed. Rainford states that only three vessels laden with grain have arrived off coast since the 12th inst. A full average business appears to have been transacted in cargoes afloat at full quotations.

The London averages announced this day were:—

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—The market opened with a steady demand for consumption, but it has since become dull, and prices again show an occasional reduction of 6d to 1s, especially for low to middling qualities. Arrivals continue in excess of the weekly clearances, and the stock shows some further increase, being still considerably above that in 1859. About 1,670 hhds West India found buyers to yesterday at previous quotations. Barbadoes, by auction, went at 37s 6d to 44s 6d for brown to very good yellow; and grainy Demerara at 39s to 44s 6d; very fine grey as high as 46s per cwt. The deliveries last week amounted to 3,645 tons, making a deficiency of 3,150 tons for home use and 1,720 tons for export since the beginning of the year. The stock is nearly 14,000 tons above that of 1859 at the same period.

Mauritius.—16,000 bags nearly three-fourths sold at and after the sale: yellow, 38s to 42s; grey, 37s 6d to 40s; brown, 31s 6d to 37s; grainy and crystalised sorts, 40s to 45s 6d per cwt, being in many instances 6d cheaper.

Bengal.—Some contracts have been made in Gurpatta date by private contract at about previous rates.

Penang.—2,506 bags sold steadily at about the former value: soft grey to very good yellow, 37s 6d to 42s 6d; brown, 33s to 37s.

Foreign.—1,000 bags low soft brown Siam have changed hands by private contract at 31s 6d, a few parcels of foreign muscovado at previous rates, and 5,000 bags dark unclayed Manilla at 32s 3d. A floating cargo of Rio Grande has been sold at 24s 6d for the United Kingdom. In public sale, 1,824 boxes Havana chiefly met with purchasers: sound, grey to fine yellow, 39s 6d to 45s; washed in proportion. 305 casks Cuba were mostly bought in at 39s to 42s 6d; brown, 37s to 38s 6d; a portion being since sold. 565 casks Porto Rico partly sold: mid to very fine pale yellow, 42s to 49s per cwt.

Refined.—The market has been quiet, but prices are not lower than last quoted, viz., common to middling dry goods, 51s to 52s 6d. Crushed and pieces remain much the same as before.

Rum.—Rather more inquiry prevails for common kinds. 350 casks East India sold yesterday at 1s 7d proof. Small sales have been made in Leewards at 1s 9d, and Demerara at 1s 11d to 2s per gallon.

Cocoa.—Yesterday, 5,200 bags Guyaquil, offered by auction, were withdrawn, the bulk at 80s, and 500 bags at 72s, there being no offers made near those prices. 491 bags Trinidad partly sold at previous rates: grey, 76s to 80s; mixed to fine red, 81s to 95s 6d. 151 bags Grenada were taken in at 66s to 70s; and 500 bags St Lucia at 62s to 63s per cwt.

COFFEE.—Large public sales have taken place, but the various parcels brought forward nearly all sold, Plantation at 1s to 1s 6d, and native at 6d to 1s under the previous value. Of the former, 1,250 casks 600 barrels and bags found buyers: fine fine ordinary to low middling, 66s to 70s; middling to good, 70s 6d to 81s. 3,600 bags 535 casks and bags native realised 60s to 64s 6d for ordinary to good. 159 casks Jamaica, fine ordinary to good, 63s to 80s 6d. 694 bags 47 casks East India: pale bold Manilla, 64s 6d; low good ordinary Singapore, 59s to 59s 6d; and Tellicherry 65s 6d to 66s 6d. A floating cargo of St Domingo has been sold for a near port at 62s 6d per cwt.

TEA.—Business has been nearly suspended by private contract, on account of the large public sales. These commenced on Wednesday, and consisted entirely of Assam, which went generally 2d lower in most cases, fine flowery pekoe showing about 6d reduction. The China teas passed off heavily, but the importers generally supported the market and bought in freely. Some blackish leaf congou sold for cash at 1d to 1½d per lb reduction. There were 37,169 packages in the catalogues, and 20,422 had passed up to yesterday afternoon, leaving nearly 17,000 packages for sale this day.

RICE.—Two floating cargoes of Arracan have been sold at 10s 9d, and considerable sales made on the spot at extreme rates: Necrancis Arracan, 9s 1½d to 10s 6d; other soft grain descriptions, 8s 6d to 9s 4½d; pinky Madras, 9s 6d to 10s 6d; Java, 11s 6d to 12s 6d; while Bengal, low to good, 9s 6d to 12s 6d. The deliveries continue remarkably large, especially those for home use and there has been a further serious falling off in the stock.

IMPORTS and DELIVERIES of RICE to April 14, with STOCK on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	7760	6350	34270	17000
Deliveries for home use	18780	6810	9450	11170
Exported	6890	6850	5345	19500
Stock	54900	78880	82700	41050

SPICES.—The chief feature in the markets has been the sales of pepper, with 5 per cent. interest allowed to the trade, the same as on other spices. 2,200 bags 1,600 robins greyish black Aleppy partly found buyers at moderate rates, from 4⅜d to 4⅝d. 544 bags Penang realised 3¼d, one lot 4d. Of 804 bags white, about 100 bags good Singapore brought 6⅝d, one lot 6½d. The Penang was bought in at 6½d to 6⅝d. Small nutmegs have gone slightly cheaper; others the same as before: brown sorts ranged from 1s 4d to 2s 2d, good to fine, 2s 6d to 3s 4d. 59 cases mace realised 1s 1d to 1s 8d for ordinary to good; mouldy and wormy, 10d to 1s, being the former value. 626 bags pimento partly sold at 3⅛d to 3⅜d per lb. Large sales are declared, but holders have obtained 3⅞d per lb for good by private contract.

SALTPETRE.—There has been a limited business done by private contract, and former prices cannot be obtained in many cases: Bengal, refraction 14, sold at 39s; fine, 43s 6d. By auction, 1,100 bags, retraction 11¼ to 8¼, were taken in at 40s to 41s 6d per cwt. Since sold at prices which do not transpire.

IMPORTS and DELIVERIES of SALTPETRE to April 14, with STOCK on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	4510	6106	3205	4910
Delivered	4310	5720	4700	3500
Stock	4050	3340	4900	3475

Delivered last week 385 tons.

COCHINEAL.—292 bags Honduras about half found buyers; low silvers at easier rates, other kinds much as before: low small to superior silvers, 3s to 3s 10d; low to middling blacks, 3s 4d to 4s 1d per lb.

OTHER DYESTUFFS.—55 bales Bengal safflower went at rather lower rates, from 6*l* 10s to 7*l* 10s for middling to fair. Several sales of Gambier have been effectd at 16s 6d to 16s 9d. Of 4,700 bags good Cutch, a portion of the sound sold at 26s 6d; heated and damaged, 25s to 26s 6d. Bengal turmeric sold at 13s 6d to 14s per cwt.

LAC DYE.—55 chests common were bought in at 7½d per lb.

DRUGS.—No business of importance has been done this week.

DYEWOODS.—Red Saunders has realised 5*l* 10s to 5*l* 12s 6d, and Manilla Sapan 7*l* 10s to 8*l* 5s per ton.

RUBBER.—A few parcels of East India have changed hands at 2s to 2s 1d per lb, which makes the market firmer.

METALS.—There has been a general want of animation in the markets this week. Scotch pig iron is again lower, and the last quotation yesterday afternoon was 52s 9d to 53s. Manufactured remains without improvement. 350 tons of spelter have sold at 20*l* 15s to 20*l* 17s 6d, and ome, to he delivered at the latter price. Foreign tin is dull, and prices almost nominal: Straits, 129s to 130s; Banca, 137s per cwt. No change in British tin or other metals. Copper is in steady demand.

HIDES.—The sales of East India held yesterday went off at ¼d to ⅜d per lb lower rates.

OILS.—Nearly all kinds of fish have been dull. The lower qualities of oliva are more inquired after. Gallipoli remains dull at 61*l*, and floating cargoes offer at 58*l* to 59*l* per tun. Fine palm has been in moderate request at 46s. An export demand has sprung up for cocoa-nut. Ceylon sold at 42s 6d to 43s; Cochin, 44s 6d to 45s. Sales are reported on Russian account. Linseed has been firm, with a fair demand by the trade and shippers: 28s is now the value on the spot; 29s 3d for forward delivery. More inquiry exists for rape: foreign refined, 41s 6d; brown, 39s 6d per cwt.

SPIRITS OF TURPENTINE remain at 36s for American. Rough is held at 9s 6d per cwt.

JUTE.—A limited inquiry has prevailed privately, although the market is firmer. 4,144 bales by auction, on Wednesday, sold at previous rates to 10s or 20s advance for some marks: ordinary to good, 14*l* to 20*l* 2s 6d per ton.

HEMP.—All kinds are rather quiet.

TALLOW.—The market has been steady during this week, and was firm yesterday. 1st sort Petersburg Y.C., 56s 6d; April to June, 55s to 55s 3d; for the last three months, 51s 9d per cwt. There is little speculative business going on, but the relatively low prices for late deliveries attract partial attention.

PARTICULARS OF TALLOW.—Monday, April 16.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market was more steady to-day. 3,734 bags Mauritius, 6,007 bags Madras, 1,157 bags Bengal, and 577 bags Natal, by auction, realised the previous value. 2,200 casks West India have found buyers during the week. To-day, two floating cargoes of Havana, Nos. 11½ to 12, sold at 29s 3d to 29s 6d per cwt for Northern ports.

COFFEE.—327 bags Singapore Java brought 60s to 62s 6d. 59 casks 121 barrels and bags Jamaica, and 32 casks plantation Ceylon, went at the previous value.

COCOA.—41 bags Grenada at 61s to 63s 6d per cwt went lower.

TEA.—The parcels offered "without reserve" sold more readily to-day at full prices. 6,000 packages remain for sale on Monday.

RICE.—8,137 bags Java partly sold at 13s 6d to 15s 6d. 7,389 bags common to good pinky Madras brought 10s to 10s 6d per cwt.

SPICES.—Of 103 cases cassia lignea, one lot good sold at 96s; common bought in at 90s to 92s per cwt.

OILS.—30 tuns colonial sperm sold by auction at 98*l* 10s to 99*l*; 10 tuns bagged, 99*l* 10s; 50 tuns Southern, 30*l* to 35*l* per tun. 780 packages cocoa-nut: Ceylon, 42s to 43s 3d; Cochin, 44s 9d to 45s. 1,265 casks palm part sold at 42s 9d to 46s 6d.

TALLOW was easier, viz., Y C. on the spot, 56s. 1,200 casks, by auction, were mostly taken in, except a few lots South American, which sold at 55s 6d to 56s 3d per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very steady this week, the demand moderate, and no material alteration in prices. Nothing doing for export. The Dutch market for crushed is very steady. About 120 tons have been sold in barrels, at 32s 6d f.o.b. at Amsterdam.

GREEN FRUIT.—Arrivals have been of an extensive character, which has depressed prices. Some cargoes of oranges, from St Michael's and Valencia, sold by Keeling and Hunt at public sale, went 2s per package lower. More inquiry for lemons; stock light. Nuts in moderate demand; Spanish lower; Brazil difficult to sell at the present high price.

DRY FRUIT.—With the exception of four public sales this week, the market has been in the same position as before Easter. Fruit of all sorts is dull, except lowest priced currants, say 29s to 30s, or red raisins at lowest quotations. A great reduction has taken place in the price of layer muscatels during the week.

ENGLISH WOOL.—The market is rather quieter this week, and prices generally a trifle lower.

COLONIAL AND FOREIGN WOOL.—There is very little doing. Our next sales will commence on the 3rd proximo. Quantity arrived is only 43,000 bales. The sale of 2,000 bales colonial, at Liverpool, on the 18th inst., went off at an average reduction of 2d per lb on last London sale rates

HEMP AND FLAX.—In flax nothing is doing. The hemp market is steady at our quotations.

COTTON.—Sales of cotton wool from Friday, 13th April, to Thursday, 19th, inclusive:—400 bales Surat, at 4d for fully fair Dhollers, and 4½d for good fair Oomrawattee; 50 bales Madras at 5½d for good fair Tinnivelly. In the early part of the week, 100 bales Surat were sold at ⅛d per lb decline on last week's prices, and 50 Tinnivelly at previous rates. Yesterday a forced sale was made for cash of 300 bales fully fair Dhollera at 4d per lb, being ⅛d per lb decline, and the market closes heavily, prices being quite unsettled; at the same time, generally, there is no great pressure to realise. 760 bales Surat are advertised for public sale on Thursday next, the 26th inst. Also, on the 3rd May, 1,360 bales Tinnivelly, without reserve.

SILK.—Prices remain unchanged, but without business doing.

TOBACCO.—Business has been very limited, and the small sales effected have chiefly consisted of assortments for immediate consumption.

LEATHER AND HIDES.—The market continues without alteration. The fresh supplies are not large, and at Leadenhall on Tuesday there was a fair inquiry for English butts, chiefly of the lighter weights, good common dressing hides, heavy harness hides, calf skins, and English horse hides, at previous quotations. The demand for heavy foreign butts is unusually small. At the public sale of foreign soles this week, the few heavy hides sold well: the best Australian at 6d to 6⅜d; Cape, 8¼d; the light Australian were not sold. Of the 110,000 East India kips, about 50,000 only were sold, and those generally at a reduction of ½d per lb. No salted Buenos Ayres were offered. By private contract there have been sold 686 Buenos Ayres cow hides, 44 lbs, at 7¾d, and 1,000 Melbourne, 60 lbs, at 6¼d.

METALS.—The market exhibits few features of interest, the general tone of it continuing to be flat. Copper finds a steady demand for both English and foreign, and there is nothing to indicate any change at presents in that state of things. Iron is dull of sale in all quarters, that is, for manufactured, while Scotch pig is steady at about last week's quotations. Tin is without change. Spelter shows a shade of improvement in price. Lead goes off rather more slowly. Tin plates are quiet.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	56	6
Fat by ditto	2	11½
Yellow Russian	57	6
Melted stuff	41	0
Rough ditto	24	0
Greaves	16	0
Good dregs	7	0

PROVISIONS.

There has been a complete reaction in the bacon market this week. Prices much higher, some having been sold, for weekly shipments, at 68s f.o.b. for sizeable, and 66s for heavy. The Wiltshire curers are paying exceedingly long prices for pigs, as much as 61s being paid. Butter still in good demand, at higher prices. Scarcely any Irish butter in the market, only a few new Corks coming on.

METROPOLITAN CATTLE MARKET.

MONDAY, April 16.—The total imports of foreign stock into London last week amounted to 3,825 head. In the corresponding week in 1859 we received 3,021; in 1858, 1,254; in 1857, 1,096; in 1856, 229; in 1855, 951; and in 1854, 505 head.

Compared with Monday last there was a considerable increase in the supply of beasts on offer this morning, and the general quality of the stock was good. All breeds met a dull inquiry at a decline in the quotations of 2d per 8 lbs. The general top figure for Scots was 4s 8d per 8 lbs. The show of most breeds of sheep was seasonably extensive. On the whole the mutton trade ruled firm at the currencies realised on this day se'nnight. The best Downs in the wool sold at 5s 10d, out of the wool at 5s per 8 lbs. We have to report a dull sale for lambs, the supply of which was good, at from 6s to 7s 4d per 8 lbs. Calves were in short supply and steady request at very full prices.

SUPPLIES.

	April 19, 1858.	April 18, 1859.	April 16, 1860.
Beasts	4190	3110	4240
Sheep and Lambs	22880	20310	23610
Calves	147	85	126
Pigs	355	400	320

THURSDAY, April 19.—Although only a moderate supply of beasts was on sale in to-day's market, the demand for all kinds ruled very inactive, at Monday's decline in the quotations. The show of sheep was rather limited; nevertheless, the mutton trade was less active, on former terms. We have to report a very dull sale for lambs, at from 4d to 6d per 8 lbs less money. The quotations ranged from 5s 6d to 7s per 8 lbs. Calves were heavy, and 4d to 6d per 8 lbs cheaper, the top figure being 5s 6d.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	2	3	4	Prime Southdown sheep	5	6	5	10
Second quality ditto	3	6	3	10	Large coarse calves	4	6	5	0
Prime large oxen	4	0	4	4	Prime small ditto	5	2	5	6
Prime Scots, &c.	4	6	4	8	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	0	Small porkers	4	2	4	10
Second quality ditto	4	2	4	8	Suckling calves...each	18	0	23	0
Prime coarse-woolled do.	4	10	5	4	Quarter old store pigs	24	0	30	0

Lambs, 5s 6d to 7s 0d.

Total supply—Beasts, 800; sheep and lambs, 6,100; calves, 190; pigs, 284.
Foreign supply—Beasts, 90; sheep, 512; calves, 110.

NEWGATE AND LEADENHALL.

FRIDAY, April 20.—The supplies of meat on offer to-day are seasonably extensive. The trade generally is less active, as follows:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	8	2	10	Mutton, inferior	3	8	4	0
Middling ditto	3	0	3	4	— middling	4	2	4	6
Prime large	3	6	4	0	— prime	4	8	4	10
Prime small	4	0	4	2	Large pork	3	8	4	2
Veal	4	2	5	0	Small pork	4	6	5	0

Lambs, 5s 6d to 6s 4d.

HOP MARKET.

BOROUGH, Monday, April 16.—Our market remains in the same passive state as of late; the demand being very moderate, and prices steady. Our currency is as follows:—Mid and East Kents, 80s, 105s, 140s; Weald of Kents, 62s, 75s, 82s; Sussex, 60s, 75s, 76s.

FRIDAY, April 20.—The bine at present has made but little progress, and is unusually backward. The market is firm at late prices.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, April 16.—During the past week the arrivals coastwise have not been large, but the trade continues very heavy, and our last week's prices were barely maintained. The following are this day's quotations:—York Regents, 90s to 150s; Lincolnshire ditto, 80s to 100s; Dunbar ditto, 100s to 120s; Perth, Forfar, and Fifeshire ditto, 80s to 100s; ditto Rocks and reds, 75s to 85s; Irish whites, 70s to 80s; French ditto, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, April 19.—The arrivals of potatoes coastwise and by rail have been moderate this week, and trade continues tolerably active at the annexed rates:—York Regents, from 160s to 180s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto Cups, 90s to 100s; Dunbars, 100s to 105s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 4*l* 17s 6d; clover, 4*l* to 5*l* 12s 6d; and straw, 1*l* 7s to 1*l* 14s per load. Trade firm.

CUMBERLAND.—Meadow hay, 3*l* 3s to 5*l* 0s; clover, 4*l* 0s to 5*l* 12s 6d; and straw, 1*l* 8s to 1*l* 14s per load. A fair demand.

WHITECHAPEL.—Meadow hay, 3*l* 0s to 4*l* 17s 6d; clover, 4*l* 0s to 5*l* 17s; and straw, 1*l* 7s to 1*l* 14s per load. Trade steady.

COAL MARKET.

WEDNESDAY, April 18.—Howard's West Hartley 16s—Tanfield Moor Bute's 12s 9d—Wylam 16s. Wall's-end:—Acorn Close 20s 6d—Eden 20s 6d Belmont 19s—Framwellgate 20s 3d—Haswell 21s 6d—Hetton 21s 6d—Lambton 21s 3d—Hartlepool 21s—Heugh Hall 20s 3d—Hunwick 16s—Kelloe 20s 9d. Carway and Duffryn Malting 23s. Ships at market, 21; sold, 20.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 19.—The public sales commenced here yesterday with about 2,800 bales fine colonial, &c., wools, which brought together a large number of buyers, who eagerly competed for them, but the prices obtained are quoted from 1d to 1½d below those realised at the recent London sales. To-day, and until the 26th inst., East India and other low wools will be offered, amounting in all to about 12,000 bales of the former, and 6,000 bales of the latter.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 20.—Grain market very firm. Good business in wheat at 1d advance since Tuesday; flour realising extreme rates. Indian corn in fair inquiry at 37s 3d to 37s 6d for Galatz, and 36s for Ibraila Egyptians. Beans, 37s. Oats, oatmeal, and barley firm at full prices.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 20.—There still continues great inactivity in the market for manufactured iron, and with little change to note in prices. In Scotch pig iron there has been a further decline during the week, but the tone has slightly improved within the last few days. No change in copper, but yellow metal has been advanced in price ¼d per lb. Most other metals dull, but with little or no change to note in value.

IMPORTS OF FOREIGN AND COLONIAL WOOL.

COLONIAL and FOREIGN WOOL imported into London, Liverpool, and Hull, from Jan. 1 to Feb. 28, 1859 and 1860, and the total imports, including Bristol, Leith, Grimsby, and Hartlepool.

Colonial.	London.		Liverpool.		Hull.		Totals, inc. Bristol, Leith Grimsby, and Hartlepool.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending April 7 amounted to 507,270*l*, and for the corresponding week of 1859 to 442,310*l*, showing an increase of 64,960*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 222,050*l*, and for the corresponding week of last year to 188,504*l*, showing an increase of 33,546*l*.

ILLINOIS CENTRAL.—The report of the directors states that the earnings of the railway for the year 1859 amounted to 2,114,449 dola and in 1858 to 1,976,599 dols, showing an increase of 137,850 dols. The application of free land bonds and debentures, to the extent of 35,000 shares under the full paid plan, with the payments of debts by the call, had converted within a few months over 2,000,000 dols of debt into share capital, and the directors would regard their hopes and those of the shareholders for the prosperous issue of this enterprise, with early dividends, as certain of realisation, if the extinction of the debts beyond the construction bonds (of which 15,640,000 dols were outstanding, due in 1875, and which the sinking fund was rapidly diminishing,) could be provided for entirely by the conversion of the free land debt into share capital.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, April 16.—The railway market improved on the completion of the settlement, and in some degree in sympathy with Consols. There was not much business doing, but the general tendency was good. Indian guaranteed stocks were in demand and firm. Great Western of Canada shares were also a fraction better, while Grand Trunk receded to 33 to ¼. Foreign railways were inactive, but steady. Paris and Lyons, Lombardo-Venetian, and Pernambuco advanced, the latter to 1½ to 1¼ dis. San Paulo were dull, at ½ to ¼ dis. In American securities, the shares of the New York and Erie were higher. The transactions in mines were comparatively numerous, and in several cases a rise took place.

TUESDAY, April 17.—The railway market was again inactive, and generally closed the same as yesterday. The only important changes were an advance in North-Eastern and a decline in Caledonian. Lancashire and Yorkshire stock continued in demand. Great Western of Canada shares again improved, and Grand Trunk stock is ¼ per cent. higher, the final quotation being 33¼ to ¾. Indian guaranteed continued steady. In the foreign market, Lombardo-Venetian were lower at 1½ to ⅝ pm.; Bahia left off ⅜ to ¼ dis.; and San Paulo, ½ to ¼ dis. Victor Emmanuel obligations advanced ¼ per cent. The bonds and shares of the New York and Erie, and the free land bonds of the Illinois Central improved, while a decline took place in New York Central and Illinois Central shares. Mines again showed an occasional rise, the most important being in Copiapo. The shares of the London Chartered Bank of Australia were slightly higher.

WEDNESDAY, April 18.—The railwsy market was inactive, but generally steady. In one or two stocks a trifling variation took place, the principal being a reaction in Great Northern A. The sales of stock held on loan during the monetary pressure appeared to have been in some degree met by renewed investments by the public. The market was stronger at the close than at one period of the day. Indian guaranteed stocks were dull during the usual hours of business, but afterwards became firmer. East Indian left off 101¾ to 102¼. In the foreign market, Lombardo-Venetian and Great Luxembourg improved, while Paris and Lyons were flat. In American securities the bonds of the Illinios Central and shares of the New York and Erie advanced. Nova Scotia Government debentures were quoted lower. Mines were steady, and in one or two cases show an improvement. In joint stock banks there was a fresh rise in Ottoman and London Chartered of Australia, the former closing at 17½ to 18. No change of importance occurred in miscellaneous descriptions.

THURSDAY, April 19.—The railway market opened firmly, but some sales led to a general decline, from which there was no recovery. The stocks chiefly supplied were Midland, South-Eastern, and Lancashire and Yorkshire. London and North-Western and Great Western were less offered, and, although lower, comparatively steady. The colonial market was better supported, except as regards Indian guaranteed stocks, one or two of the latter showing a reduction. Grand Trunk improved to 34 to ½, and Great Western of Canada to 13 to ½. Atlantic and St Lawrence and Cape Town were likewise higher. There was no change of importance in foreign descriptions. In American securities the shares of the New York and Erie advanced. There was also rather a better inquiry for mining shares. In joint stock banks, London and County were in demand, with no supply; the nominal quotation was 35 to 36. London and Westminster were likewise in request. In miscellaneous descriptions, Electric Telegraph stock receded 1 per cent., while Madras Irrigation improved. The Canadian loan closed ½ to 1 pm. scrip, and 99½ to 100 bonds.

FRIDAY, April 20.—A very limited business was transacted in the railway share market, and a slight decline occurred in most of the principal lines. No business of any importance was done in the foreign market. Buenos Ayres and San Fernando improved to 5½. In the colonial market, Grand Trunk of Canada declined to 34½; and Great Western of Canada were steady at 13¾. East Indian were 102; and Great Indian Peninsular, 99¼ 99¾. Joint stock bank and miscellaneous shares were very dull, but prices a shade firmer.

FLUID BLACK WRITING INK—never thickens in the inkstand, permanently jet black, and produces copies by the machine—recommended for rapid writing, and adapted to climates of extreme heat or cold—in stone bottles, pints 12s dozen, quarts 21s; or packed in casks for exportation or the country, one dozen quarts 25s, two dozen 50s, three dozen £3 12s 6d.

NISSEN and PARKER, Engravers, Printers, Account Book Makers, Manufacturing and Exporting Stationers, 33 Mark lane, London.

THE GREAT EXHIBITION OF 1851—Council Medal, Exposition Universelle, 1855—Grande Medaille d'Honneur.—Gallery of Bronzes d'Art.—F. BARBEDIENNE and CO., of Paris, respectfully inform the British public, that a complete COLLECTION of their MATHEMATICAL REDUCTIONS (by the process of M. Collas) from the CHEF d'ŒUVRES of ANTIQUE and MODERN STATUARY in the Galleries of of the Louvre, Florence, and Rome, Museum of Naples, and British Museum, may be seen at Messrs JACKSON and GRAHAM'S, 35, 37, and 38 Oxford street. The Prices the same as in Paris, with the charges of importation only added. Catalogues, with marginal illustrations, may be had free on application. N.B. A large and splended collection of Ornamental Clocks, Vases, Candelabra, and other objects of taste.

HOLLOWAY'S PILLS.—Headaches, biliousness, loss of appetite, and lowness of spirits, so frequently prevalent in the spring, are all removed by a course of these purifying Pills, which act so mildly, yet so energetically, on the different organs of the body, that they never fail in removing the disagreeable symptons of indigestion above enumerated. No noxious substance enters into the composition of these Pills; hence, everybody may take them with safety. They act mildly on the bowels, strengthen the stomach, and brace the nerves. They induce a healthy action to the liver, and invigorate the whole system. In enfeebled, debilitated, and hardly used constitutions, they at once effect a marvellous improvement, which, day by day, gains ground as the Pills are taken.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, STRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Sherland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hemorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell. Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners prove that a half-pint of DR DEJONGH'S Oil is equal in remedial effects to a quart of any other kind. Hence as it is incomparably the best, so it is likewise tar the cheapest.

Palatableness, speedy efficacy, safety, and economy unitedly recomend this unrivalled preparation to invalids.

Opinion of A. B. GRANVILLE, Esq., M.D., L.R.C.P., F.R.S., Author of "The Spas of Germany," "On Sudden Death," &c.

"Dr Granville has found that DR DE JONGH'S Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Newfoundland Oils. The Oil being, moreover, much more palatable, Dr Granville's patients have themselves expressed a preference for Dr De Jongh's Light Brown Cod Liver Oil."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES,
ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

TEETH.—MR ESKELL, Sargeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic), and Bennett's hill, Birmingham. Established 1847.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c, which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq, 8 Burton crescent, Tavistock square, London, W.C.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

POSITIVELY THE LAST SEASON.

DR KAHN, IN RETIRING FROM the position he has so successfully occupied for many years, takes this opportunity of thanking most cordially the public who have so liberally supported and rewarded his exertions, and begs to inform his numerous patrons that this is the last season of his popular lectures Dr Kahn will continue to deliver his Lectures on the "Philosophy of Marriage," daily at 3 and 8, at his Museum, top of the Haymarket. Admission, One Shilling.

Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

Just published, in 1 vol. 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,

VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.

(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12 3, and 5 till 8. Sundays from 10 till 1.

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s: Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED,—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3¾-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair: larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR

SILVER.—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

A TOILETTE REQUISITE FOR

THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 13 Wellington street north, Strand, W.C.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

CROSSE AND BLACKWELL,

Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

HANDSOME BRASS AND IRON

BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED

CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road W.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality.	Medium Quality.	Best Quality.
	£ s d	£ s d	£ s d
Two dozen full-size Table Knives, ivory handles	2 4 0	3 6 0	4 12 0
One-and-a-half dozen full-size Cheese do	1 4 0	1 14 0	2 11 0
One pair regular Meat Carvers	0 7 6	0 11 0	0 15 6
One pair extra size do	0 8 6	0 12 0	0 16 6

One Steel for sharpening	0 3 0	0 4 0	0 6 0
Complete Service	4 14 6	6 18 6	9 16 6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III., c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,
MAPPIN BROTHERS,
Queen's Cutlery Works, Sheffield; and
67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

SAFETY BOILERS (TUBULOUS)

PROVED AT A PRESSURE OF 3,000 lbs.

These Boilers are now made with water fire-box and water fire-bars. They supply at pleasure either overheated or saturated steam. They combine great economy of fuel with perfect safety from explosions.—For particulars apply to the manufacturers and patentees, Messrs A. W. Williamson and Loftus Perkins, 8 Francis street, Regent's square, W. C., or to the agents, Messrs Robert MacAndrew and Co., 3 Allhallows chambers, Lombard street, E. C.

EAU-DE-VIE.—THIS PURE PALE

BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

REDUCTION OF TEN POUNDS PER TON
IN THE PRICE OF

THORLEY'S FOOD FOR CATTLE

SPRING AND SUMMER ATTIRE.—

E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have ransacked the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of Minories and Aldgate, and corner of New Oxford street and Hart street.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the History of British Costume, with self-measurement and list of prices, gratis on application, or post free.

THE "INDISPENSABLE" SUIT,

made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

THE GREAT EASTERN.—

An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other Paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

When in bottle, the genuineness of the labels can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

NEW LINE OF STEAM

PACKETS from LIVERPOOL to the BRAZILS.—The fine new first-class and powerful Steamer ERNST MERCK, Captain Andersson, 900 tons register, is appointed to sail on the 24th April from Liverpool, for Bahia and Rio de Janeiro, calling at St Vincent and Pernambuco to land passengers, parcels, &c.

This magnificent steamer is the pioneer of a new line from Liverpool to the Brazils, and, to insure success, moderate rates of freight and passage money will be charged.

This line of steamers being under contract, are all engaged, under heavy penalty, to make their passages within a certain number of days, including stoppages, thus insuring to passengers and shippers a speedy and sure conveyance.

Apply, in London, to Messrs Windsor Brothers, 115 Leadenhall street; in Glasgow, Messrs J. and R. Young and Co., 107 Buchanan street; in Manchester, Mr J. J. Radford, South parade, St Mary's; in Hamburg, Messrs Cellier and Parrau; in Antwerp, Messrs Grisar and Marsily; in Havre, Messrs Soubry and Grosos; and in Liverpool to Nuttall, Mors, and Co., 18 Chapel street, Agents for this line.

OVERLAND ROUTE.—

COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Reunion, Ceylon, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers call at Cork Harbour, on both outward and homeward passages, to land and receive Mails. The Steamers from New York to call at Cork, commencing with the Persia, to leave New York on the 25th April.

BRITISH AND NORTH

AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and her Majesty's mails. TRADE B/P MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—

The LANCET states, "This is superior to anything of the kind known."—The most wholesome part of the best Indian corn, prepared by a process patented for the Three Kingdoms and France, and wherever it becomes known obtains great favour for Puddings, Custards, Blancmange; all the uses of the finest arrow root, and especially suited to the delicacy of Children and Invalids.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Manchester, Dublin, and London.

TO INVESTORS.—

CONSOLS CAPITAL STOCK is a medium for employing and improving large or small sums of money in connection with Government securities. The stock is issued by the Consols Insurance Association, 429 Strand, London. Incorporated pursuant to Act of Parliament. Investments bear five per cent. per annum interest, receivable monthly, if desired.

Full particulars may be obtained on application at the chief offices, 429 Strand, London, to

THOMAS H. BAYLIS, Managing Director.

TO MERCHANTS AND OTHERS —

Very Important.—The following letter has been received by the Secretary of the Additional Curates Society:—

London, Feb. 27, 1860.

Rev. Sir,—I should be glad to know how far the following plan would meet the wishes of your Committee.

I am thinking of making a special contribution (intended to be annual for at least some years, provided nothing unforeseen occurs), towards providing additional clergy for those parts of the metropolis where they are most needed, and which are the least able to provide them for themselves.

My wish, however, is that, wherever practicable, the parish or district shall provide a portion of the clergyman's stipend to meet a grant from the fund which it is my desire to help to form. It would also be my wish that, in order to get the parish or district gradually to find the whole of the stipend, grants should only be made for a limited number of years—say 3, 5, or 7—and with the understanding that they should annually be decreased. Should I resolve on contributing £200 or £300 a year, is it your opinion that others would be induced to join in the work? On those who make their money in a particular town or city it appears to me that there is an especial call to provide for the spiritual wants of the humbler inhabitants of that town or city, and I trust that there are many in London who will acknowledge the claim.—Yours obediently, A MERCHANT.

To Rev. W. R. Cosens, 7 Whitehall, S.W.

It is earnestly hoped that others who are interested in the humbler inhabitants of the metropolis may feel the claim upon them to provide for their spiritual wants, and assist in forming a London Diocesan Fund. All communications and contributations may be addressed to Rev. W. R. Cosens, the Secretary of the Society for Promoting the Employment of Additional Curates in Populous Places, at 7 Whitehall, S.W.

PERUVIAN THREE PER CENT. LOAN, 1853.

Notice is hereby given, that the following sums, viz., £38,324 5s, the amount of the Redemption Fund for the six months ending the first day of April, 1860, and £7,809, the amount of accumulated interest on previous redemptions, have been employed in the redemption of the undermentioned Bonds:—

Present—JOHN NEWTON, Jun., Notary Public.

London, April 18, 1860.

PORTUGUESE RAILWAYS' ROYAL COMPANY.

Share Capital, 35,000,000f (£1,460,000), divided into 70,000 Shares of 500f (£20 each.)

Public Subscription opened in Paris by the Société Générale de Crédit Industriel et Commercial (President le Marquis d'Andiffrat), duly authorised by His Excellency the Minister of Finance, and in accordance with the 5th Article of the Statutes of the Company.

A Subscription is also opened at Messrs C. Devaux and Co.'s, London.

BOARD OF DIRECTORS.

(Subject to the approval of the Shareholders at the First General Meeting.)

MM. Marshal, Duke of Saldanha, late President of the Portuguese Council of Ministers.
Viscount Paiva, Minister of Portugal in Paris.
Fortunato Chamico, Banker in Lisbon.
Roldan, Banker in Lisbon.
José de Salamanca, Vice-President of the Board of Directors of the Madrid and Saragosse Railway.
A. Llorente, Director of the Madrid and Saragosse Railway.
I. de Zaragoza, Director of the Madrid and Saragosse Railway.
De La Grandara, Director of the Madrid and Saragosse Railway.
José de la Fuente, Ex-Deputé.
Ch. Devaux, Banker, London.
Buddicom (William Barber).
E. Blount, Banker in Paris, Director of the Madrid and Saragosse Railway.
Lichtlin, Vice-President of the Société Générale de Crédit Industriel et Commercial.
Joseph De La Bouillerie, Director of the Société Générale de Crédit Industriel et Commercial
Chatelus, Chief Engineer of Mines, and Director of the Madrid and Saragosse Railway.
Gustave Delahante, Director of the Madrid and Saragosse Railway.

According to the statutes, with the approbation of the Portuguese Government, Monsieur Paulin Talabot, the eminent French engineer, has been appointed arbitrator to settle all questions relative to the execution of the line. Moreover, he is to superintend the definitive reception of the works.

The lines of railway forming the object of this Company are composed of—

1st. A line from Lisbon to the Spanish frontier, near Badajoz.

2nd. A line from Lisbon to Oporto.

The total length of these lines is about 480 kilometres (298 miles), divided as follows:—

	kilometres.
Section, common to both lines	110
Line to the Spanish frontier	153
The Oporto line.....	217
Total.....	480

The concession of this railway has been granted to M. José de Salamanca by Act of the 14th September, 1859, and ratified by the Cortes, at the following conditions:—

1. The concession is granted for 99 years.
2. Tariffs similar to those of the French railways.
3. Subvention granted by the Portuguese Government, amounting on an average to 123,653f per kilometre (equal to £7,958 per English mile).

M. José de Salamanca transfers the said concession to the Portuguese Railways' Royal Company without any reserve, on the following terms and conditions:—

1. According to Article 6 of the Statutes, the cost of the line (single line of rails like the Saragossa Railway) over and above the amount of subvention allowed by the Portuguese Government, is agreed to be executed at a fixed price of 132,350f per kilometre (£8,518 per English mile), including stationary and rolling plant, stations, workshops furnished with tools, lands, electric telegraph, and other accessories, the whole ready to be delivered for the working of the line.

The interest to be paid during construction, and the expenses relative to the formation of the Company will be borne by the Company.

2. Monsieur José de Salamanca undertakes to work, on his own account, at his risk and peril, such portions of the line which may be opened before the whole of the works are completed, in consideration of which he undertakes to pay to the Company 2 per cent. per annum upon the calls received on the shares until the lines are completed.

3. M. José de Salamanca undertakes to deliver, completely finished, the line to the Spanish frontier within two years and a half, and the line to Oporto within three years.

The Company is "anonyme." Its statutes have been approved by a royal decree, dated the 22nd of December, 1859.

Independent of the 70,000 shares, forming the share capital of 35,000,000f, the Company is authorised to issue bonds for the completion of the undertaking.

Until the completion and opening of the lines, the shareholders will receive, half-yearly, in Paris, London, or Lisbon, 8 per cent. per annum, from the 1st January, 1860, being 6 per cent. interest, and 2 per cent. to be paid by M. José da Salamanca, as before stated. Total 8 per cent. from 1st January, 1860.

By the terms of the statutes, after 6 per cent. interest has been paid to the shareholders, 1-20th of the surplus is to be paid to the Concessionnaires, and 1-20th to the Directors for the time being.

A gross receipt of 24,000f per kilometre would give a dividend of 50f per share of 500f (£2 per share of £20); larger receipts must be expected, taking into consideration that the receipts of the Portuguese lines will no doubt, within four years, be as large as those of the Madrid and Alicante, whose present gross returns are now more than 30,000f per kilometre. There is even reason to believe, that in consequence of the importance of the port of Lisbon, and its special situation as regards transatlantic countries, the receipts on the line will reach to a much higher figure than what has been just mentioned. This opinion is corroborated by the following:—

The railway from Lisbon to the Spanish frontier is a portion of the great line which crosses the Iberian Peninsula, joining Lisbon with Santarem, Badajos, and the line from Madrid to Alicante, and creating a communication with Madrid, Saragossa Pampelona, Barcelona, and the French lines—all which railways have been granted, and are to be entirely finished when the Portuguese lines are completed.

The Oporto line joins the Tagus with the Douro provinces and the North of Portugal.

It crosses Coimbra and the richest provinces of Portugal. The population of these provinces, according to the official statistics, are equal, within one-sixth, to the population of the three most populous departments of France, viz., the Nord, l'Aisne, and the Pas de Calais.

A section of a railway opened from Lisbon to Ponte d'Asseca, which does not yet carry goods, and has not actually the traffic from the left bank of the Tagus, has already gross receipts of 13,000f to 14,000f per kilometre.

The Portuguese Government, desirous fully to develop the traffic of the railways, has proposed to the Cortes the construction of 1,600 kilometres (1,000 miles) of new public roads; this is of great importance to this undertaking.

The subscription will be closed on Monday, the 23d April inclusive.

100f, or £4 per share, to be paid on application. Second call of 100f, or £4 per share, to be paid within 10 days after allotment.

The shares will be allotted at the pro rata of the quantity applied for, except applications for 10 shares or less, which will not be reduced unless the amount of such applications exceeds the share capital.

Subscriptions are opened—In Paris, at the offices of the Société Générale de Credit Industriel et Commercial, 57 rue Taitbout: London, at Messrs C. Devaux and Co.'s; Lisbon, at M. Roldan and M. Chamico's; Madrid, at M. José de Salamanca's.

Copies of the Statutes can be had at Messrs C. Devaux and Co.'s, where also can be inspected copies of the Act of Concession, statistical reports, and other documents.

ROYAL ITALIAN OPERA, COVENT GARDEN.

First appearance of Madame Grisi and Signor Mario.

On Tuesday next, April 24, will be performed (for the first time at the new theatre) Donizetti's Opera, LA FAVORITA. Leonora, Madame Grisi (being the first of the twelve representations to which her engagement is limited); Inez, Madame Tagliafico; Alfonso IX., M. Faure (his first appearance in that character); Baldassare, M. Zelger; Don Gaspare, Sig. Rossi; and Ferdinando, Signor Mario (his first appearance this season).

Conductor, Mr Costa.

The Incidental Divertissement will be supported by Mdlle Zina and M. Desplaces.

Extra Night next Thursday.

Third appearance of Mdlle Csillag. — On Thursday next, April 26, an Extra Night will take place, on which occasion will be performed (for the third time these five years) Beethoven's celebrated Opera, FIDELIO. Leonora, Mdlle Csillag (her third appearance in England); Marcellina, Mdlle Corbari (her third appearance this season); Rocco, M. Zelger; Pizzaro, Sig. Tagliafico; Il Ministro, Sig. Polonini; Giacchino, Sig Lucchesi; and Florestano, Sig Neri-Baraldi.

After which, the Divertissement entitled AZELIA; in which Mdlle Zina will appear.

ASTLEY'S ROYAL AMPHITHEATRE.

Proprietor, Mr Wm. Batty.

Sole Manager, Mr E. Hughes.

The New Management, in announcing the Triumphant Success of the Re-opening of this Popular Theatre, have the utmost satisfaction in stating they but re-echo the sentiments expressed by the entire press and the public nightly, that the New Great Military Spectacle, with its unprecedentedly Magnificent Scenery and Effects, Splendid and Appropriate Costumes and Appointments, and Grand Mise-en-scene, is the most perfect and Imposing Hippo-Drama ever produced. The Renowned Continental and British Equestrian Artistes are also received, each evening, with the unbounded approbation of astonished and delighted audiences. The novel and elegant arrangement and conducting of the Arena give the most complete satisfaction; and with the truly gorgeous decorations, render the evening's amusement in this far-famed Establishment one of the most varied, brilliant, and recherche in this great Metropolis. On Monday, April 23rd, 1860, and during the week, to commence with the great military spectacle, in four acts, entitled THE HISTORY OF A FLAG! To be succeeded by an Inimitable Routine of Equestrian Achievements in the Scenes of the Arena, supported by a host of Star Riders of the day, and last nights of the wonder of the world—Jonathan Jack. Doors open at ½-past 6, commence at 7. Box-office open daily from 11 till 4. Stage Manager, Mr W. West.

NEW THEATRE ROYAL ADELPHI.

Sole Proprietor and Manager, Mr B. Webster.

Last 12 Nights of the Popular Drama of The Dead Heart (in consequence of Mr B. Webster's engagements at Bath, Bristol, and Manchester, commencing the 30th of April).

Last six nights of THE DEAD HEART. Mr B. Webster, J. L. Toole, D. Fisher, P. Bedford, Billington, Stuart, C. J. Smith, Powell, Romer; Miss Woolgar, K. Kelly, and Laidlaw. And the Grand Musical Fairy Extravaganza of THE FAIR ONE WITH THE GOLDEN LOCKS. Messrs J. L. Toole, P. Bedford, Eburne, Powell, Romer; Miss Woolgar, Miss Emily Thorne (her first appearance), Miss K. Kelly, Miss Laidlaw.

Doors open at ½-past 6, commence at 7.—Box-office open from 10 till 5. No charge for booking.

Acting Manager, Mr B. Webster.

S. W. SILVER AND CO., OUTFITTING WAREHOUSES, 66 and 64 CORNHILL, E.C.

Special Outfits for Australia, India, and China, for Naval and Military Officers, Cadets, Midshipmen, and Civilians. Clothing for Gentlemen's Home Use,—viz., Naval and Military Uniforms and Civilian Dress of the best Materials and Workmanship. Shirts, Hosiery, Gloves, &c. Ladies' Outfits. Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteaus, &c., portable and suited to all climates.

Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

The Political Economist.

THE EFFECTS OF INCREASING ELECTORAL CORRUPTION.

THE probable consequence of reducing the borough franchise has been generally discussed as if all boroughs were precisely similar. Such, however, is certainly not the case. Large manufacturing cities differ from small agricultural towns in all their political characteristics. Whatever is true of the one, will almost necessarily be untrue of the other. A correspondent of ours remarked last week:—

"The effect of the main provision of the Bill—the reduction of the borough franchise to 6*l*—will, I think, be very different in the small boroughs from what we may expect it to be in the large. In the great towns we are told, and I believe told truly, that there is an unenfranchised class, an artisan class, which, in intelligence, in independence, in social comfort, is on a level with many classes which now possess the franchise. We are informed, and I believe we are informed truly, that this class has peculiar political tendencies, peculiar prejudices to a certain extent, peculiar thoughts, which make it desirable that it should have a recognised organ in the House of Commons—that the Legislature should not totally and entirely be ignorant of its views. Let us concede that such is the case in the large towns. But can any one find this class in the small towns? Can any one who knows a petty agricultural borough say, that he knows there any considerable number of persons too poor to be reached by the present property qualification, and yet intelligent enough to deserve the franchise? I do not believe, among all our extreme Reformers, you would find *one* who would say 'yes' to that question. For this part of the subject is one on which we all have some means of informing ourselves. The large manufacturing cities are inevitably 'a great unknown' to many of us; it requires long residence, protracted investigation, careful study, to know them well. But almost all Englishmen know some petty country town or other. Let them endeavour to find there this peculiar intelligent class, with great political aptitudes and new political thoughts. They would never find it; they know it would be ludicrous even to look for it.

"It is common to say that we know nothing of the new class which the 6*l* franchise would include. And, as far as respects the great cities, it may in some measure be so. But in the small boroughs it is not so. There is no reason for doubting that the new class whom we are about to enfranchise would resemble the *lowest order of the present voters*. They are one degree poorer, but there is no chance of any other difference. No one can pretend to allege that in our petty boroughs a person who lives in a 6*l* house is the least likely to be *more* intelligent or *more* independent than a man who lives in a 10*l* house. Now what the lowest order of our present voters are we know. We know that in every small borough there is at the bottom of the scale a corrupt element which expects to be bribed at every election, and has no idea of the value of a political privilege except the privilege of being paid. This painful fact has been proved before hundreds of election committees, and if we could have a committee to examine the purses of members of Parliament, we should know even more about it than we do now. Why, then, should we increase this 'corruptible element'? Why should we add to the number of a class the very existence of which we lament? Why should we, who *say* we are opposed to bribery, augment the number of persons whom we *know* will be bribed?"

There cannot be any doubt that these observations are correct. The lowering of the borough franchise will in remote towns inevitably be attended with a large increase of corruption.

The importance of this circumstance cannot be appreciated, unless we call to mind how many these small towns are. From a paper laid on the table of the House of Commons last year, it appears that there were then, in England and Wales only,

12	towns with not more than 300 electors, returning	17	members
101	— more than 300 but less than 1,000 electors, returning	156	—
		173	—

Almost all of these are agricultural towns, and it is perfectly certain that the new voters we are about to place on the register will resemble in all essential respects the lowest class of the present voters. It is equally certain that the lowest class of the present voters in most of these towns are tainted—in a very great number of cases we fear it must be said thoroughly tainted—with corruption. Beside these towns, there are 42 towns (returning 77 members) with more than 1,000 but less than 2,000 electors; and though many of these may be tolerably pure, yet Gloucester and Wakefield are two of them, and we have lately learnt by the best evidence what the lowest classes of the present voters at those places are.

What, then, will be the effect of increasing the corruptible element in these towns? The first effect, we believe, will be nearly to destroy that which is said to be their special utility. These small boroughs are alleged to be useful inlets for young men of promise. But the effect of increasing the bribeable class will be to make them too expensive for young men of promise. Public life in this country has ceased to be remunerative. No sensible man thinks of making a livelihood by it. In consequence, very few young men of ability can afford to spend much money in buying a seat in the House of Commons. They may throw away—as far as pecuniary prospects go—their time and their lives, but they cannot afford to throw away their capital too.

Secondly. The increase of the corruptible element in the

small boroughs will augment the *vulgar* wealth of Parliament. We all know what this expression means. In consequence of our great industrial prosperity, new-made wealth abounds. But in this country such wealth does not immediately command an equivalent social position. Accordingly, its possessors look for a seat in the House of Commons, for a member of Parliament is always "somebody." Being energetic men of business, they know how to manage a small borough much better than "young men of promise." If we progressively augment the corrupt element of our small boroughs, we shall find they will return more enterprising railway contractors—not more Cannings and Gladstones.

Thirdly. We believe that the increase of corruption will diminish the strength of the Executive Government. Some persons who have not narrowly studied our political system are surprised at one of its prominent characteristics. We boast that we are a united nation; we say that there is no substantial difference of opinion among us; we say that Whig and Tory are nearly obsolete names; and we say so truly. In every society we can verify the remark. It is certain that there is no substantial difference of opinion among ninety-nine hundredths of cultivated Englishmen. But no trace of this unanimity can be found in the House of Commons. The two great parties there are as equal as they ever were. The majority of the present Government *could* not be smaller, if the country were distracted, if the old divisions of real opinion were to revive, if the Liberals had a principle which the Conservatives would not borrow, if Mr Disraeli had a "cry." It would have been thought that a united nation would secure a united Parliament, that a united Parliament would ensure to us a strong Government; but experience shows that the expectation would be groundless. We are, as a nation, substantially unanimous, but our Parliament is certainly divided, and our Government is admitted to be feeble.

The explanation is apparent if we turn our attention from the state of Parliament to the state of the constituencies. In each of the small boroughs of England there is a strong party organisation, there are committees and counter-committees; in each of them there is an attorney on each side, and his occupation is not one which it is pleasant to describe. He has to look after the "corruptible element." He has to watch that no voter fall into the power of the enemy; he has silently and stealthily to get as many as he can into his own power. This occupation is a lucrative business to him, and he naturally wishes it to continue. Accordingly, though the Liberal attorney and the Tory attorney are agreed in nothing else, they are agreed in wishing their strife to continue; each side wishes to win, but each wishes a battle. "No fight, no fees." Neither side wishes that the other shall be annihilated. Although the nation is united, those who manage the corrupt part of the constituencies wish that they shall be disunited. If we augment the corruptible element, we increase the influence of the borough attorney, we augment the power of the spirit of division.

Moreover, wealth is as likely to belong to one party in the State as to another. So long as intellectual considerations determine the vote, the unanimity of the nation may be expected to produce the unanimity of Parliament. But when votes are determined by pecuniary considerations, two equal purses will probably produce two equal parties. In so far as the new Reform Bill increases the purchaseable element in our constituencies, it will increase the division, a principal cause of the evident weakness of our Executive Government.

Fourthly. An increase in the corruption of the small boroughs will make them too corrupt to be endured. They are already unpopular; the *feeling* of honest men is against them. We know that they have political advantages; we know that they have done good service to the cause of the constitution; we will admit that they may do good service again. But we say that if the effect of the Reform Bill is to increase the already enormous corruption, it will not be possible to maintain their existence for many years. The new Bill will, as we believe, add an additional element of evil to the boroughs already tainted; it will add an element analogous to the freemen of Gloucester to many towns now tolerably pure. We observe that many persons believe that the reduction of the suffrage is not important so long as the small boroughs are retained; they expect to counteract the influence of democracy in great cities by the influence of property and of money in small boroughs; they think that the constitution is safe as long as this part of it is retained. But if we lower the property qualification, will it long be possible to retain this part of the constitution? We believe that any great augmentation to the present corruption will render it too great to be long endured by the conscience of the English nation.

THE REFORM BILL: THE DUTY OF THE HOUSE OF COMMONS.

The Reform Bill is not to be referred to a Select Committee. It remains a simple unbalanced lowering of the franchise, without a single security against the domination of numbers. It is proceeding to an unopposed second reading, and will then be passed on to what for such a subject may be called the mob of the Committee of the whole House. With solid guarantees against the overwhelming influence of numbers, it might have been made a sound and statesmanlike measure; without such guarantees, it is a concession to unsound principles of the most dangerous kind.

The Bill, as it stands, is notoriously opposed to the sentiments of many members of the Government which introduced it. Six hundred out of 658 members of the House of Commons heartily wish that they had never heard of it. The constituencies send up no petitions in its favour. Genuine Liberals, like Mr Black and Mr Marsh, condemn it on the very same principles which we have consistently maintained. Out of Parliament, there are many earnest advocates of Reform, ourselves among the number; but we cannot meet with a single independent man who will undertake the patronage of the present Bill in its present shape. The intellect and education of the country have tried it, and found it wanting. With the exception of a very few party newspapers, the whole press, every review, every journal, every pamphlet utter warnings against it. No writer of authority, no political thinker will give it the sanction of his name. It is a development of the least sound elements in the Reform Act of 1832, without being able to plead any of the excuses of that great crisis. Lord John Russell, in his very unsuccessful speech on Thursday night, argues that this measure will not throw all the electoral power of the country into the hands of mere numbers; but he does not, and cannot deny that, after this second and deliberate concession of an unsound *principle*, it will be impossible to stop at 6*l*, or anything short of a household suffrage, which, as he well knows, would transfer the *whole* power into the hands of one class, and that the class least fitted to monopolise it.

And yet, notwithstanding objections so overwhelming to the present form of the Bill, it is gradually becoming law. Some persons fondly hope that it may be made a statesmanlike measure by alterations in Committee; but that is impossible. Details are of the very essence of a political constitution, and how can details be supplied in an assembly of more than 600 men? Amendments will crowd in from every side: some will be important, but most will be trivial, based on no common idea, often inconsistent with each other, voted upon by different members on different nights, and dependent rather on the powers of speaking and party-connection than on the political attainments of their proposers. How can a matured, harmonious, profoundly thought-out political system, deserving the name of a constitution, emerge from such confusion? Let not the country deceive itself. If there be no other way of securing solid guarantees against the democratic tendencies of this measure, it will not be assuredly by means of a Committee of the whole House.

It is, indeed, possible that in a Committee of the whole House some change of apparent importance might be made. For example, the qualification might be raised from 6*l* to 8*l*, which would probably be a change for the worse, and annihilate the one good element in the present Bill. Under an 8*l* franchise scarcely one constituency would be really commanded by the working classes proper,—while many constituencies would have their corruptible element greatly increased. Again, it is possible that in a Committee of the whole House the lodger franchise or some equivalent qualification might be engrafted on this Bill; but no such general alterations either would or could have the effect of laying down definite limits to the influence of class-numbers,—simply because that is a question of detail—one that requires careful calculation, statesmanlike foresight, minute adjust-

ment. And we need not say that no minute adjustment can be expected from a Committee of the whole House. The true principle might, indeed, be affirmed, but it could not be worked out by that machinery. It is only too likely that the principle will be lost sight of, like all other principles, in the confused *melée* of general discontent and conscious self-reproach which is sure to prevail as the clauses of this Bill are discussed in Committee,—especially when we remember that one small but united section will be on the watch to draw off discussion from the democratic principle to questions of detail.

Meanwhile, the glorious inheritance we have received from our fathers, the wealth and strength of the present, the hopes of the future, are placed in jeopardy by a spontaneous and self-imposed sacrifice, which will transfer political power from its actual possessors to numerous and unknown classes. What, then, is to be done? First, and above all, to arouse the House of Commons to a determination to do its duty. Let it understand its true position, for its responsibility is very great. If, through faction or cowardice, without compulsion and in rebellion against its own conscience, it suffers a national institution for which the annals of the world offer no parallel, to be subverted,—if it makes the democratic principle of this Bill a turning-point which shall separate the England of the future from the England of the past,—history will point to the House of Commons of 1860 as composed of men who risked themselves and their country because they had not the manliness and energy to extricate themselves from conventional trammels. They will be associated with the triflers of Versailles, who thought only of the frivolities of a Court whilst the revolution was storming at its gates; but with this difference:—these poor courtiers knew no better; but members of Parliament are fully aware of the wants of the crisis and of the real import of the measure which they are asked to pass.

But what, then, is their duty? We do not hesitate to answer this question. They have received, on the most momentous of all subjects, an incomplete measure from the Government. The most important half is wanting. The aid of a Select Committee has been rejected, and it is not possible to supply the defect in a Committee of the whole House. Let the Bill be referred back to the Government for completion, with a distinct indication of what is wanted. The Government alone can weigh the merits of the various securities which have been proposed, and frame a well-proportioned Bill. The task, we are aware, cannot be performed this Session; but this will only be a gain of time for true Reform. Party arrangements may be inconvenienced, though we see no ground for thinking that they will, if an honest assurance is given that the time gained will be devoted to a deliberate settlement of this great problem. Party is great, but England is greater still; and if ever patriotism is to assert its supremacy over party, it must be when the nature and character of the future Government of our country are at issue.

THE INDIGO PLANTERS AND THE RYOTS.

We called the attention of our readers last week to the serious character of the threatened rising of the peasantry in the indigo districts of Lower Bengal. An official telegram has since conveyed an intimation that quiet will probably be restored. But there is none the less reason why the nature of the existing relations between the planter and the ryot should not be taken into serious consideration. Even if quiet is restored on this particular occasion, there will always be danger of renewed disturbances, so long as things are allowed to remain on their present footing. Even if this were not so, we cannot allow the continuance of a system which so greatly affects our national character in the eyes of the people of India; and we, therefore, return to the subject in the hope that it may excite attention in Parliament.

Those who have read our last article must be anxious to know how it is that any large number of Englishmen can have permitted themselves to adopt a system of such gross oppression, and how far the planter community would admit the accuracy of the facts we have stated.

It must be exlained, in extenuation, that the indigo system is one which has grown up by degrees; that it has not been originated by those now engaged in it; that they are probably blinded by habit to the real injustice of the system (just as our manufacturers at home were blind to the injustice inflicted on the women and children employed in bleaching works); and that a great number of the planters are merely the agents of companies and mercantile houses at a distance, and cannot therefore, if they would, endanger the capital of their employers by departing from the established usage for any new experiment. We are further ready to admit that the present system has been so long in force, that *at first* it would be difficult to give it up without considerable loss, and a great deficiency in the supply of indigo. Labour is scarce in a country like Lower Bengal, where the peasantry are all tenants, and, therefore, desirous of occupying themselves for the best part of the year on their own lands. If the planters, therefore, rented lands with the intention of cultivating indigo on their own account, they would have to engage large numbers of the indigenous tribes inhabiting the low hills in the Santhal and Chota Nagpore districts to come and settle on their estates. This they already do to a small extent, but of course the adoption of such a plan is expensive, as these immigrants would have to be supported all the year round. But, as we said last week, the profits of indigo are sufficiently large to admit of that course being adopted. We have already indicated one other mode of meeting this difficulty, that of offering such a price for indigo as shall make it worth the ryot's while to grow it,—to make it, in fact, as profitable to him as it is to grow rice, oil seeds, or mulberry for cocoons. It is possible that for a time even this course might fail, for the present system of *compulsion* has made the very name of indigo hated by the people, and it is only by degrees that this strong feeling would pass away. But does not that very fact show most forcibly how much odium the planters,—and indirectly the British Government itself,—incur through the mode in which indigo cultivation is now carried on?

We have no wish to press too hardly upon the planters, and it is but fair to inquire what they have themselves to say on this question. Their defence then is, that they have embarked a large amount of capital in the indigo manufacture, and that they cannot afford to risk the loss of that capital; that they oppress the ryots much less than the native landowners and zemindars whose place they occupy; that they never enhance the ryots' rents or exact heavy fines; that they sometimes lend money to solvent ryots without interest, whereas the native money-lenders charge 50 per cent. for their loans; and that the expenditure of the money and employment of servants, which every factory brings to a district, must be a great advantage.

On the other hand, every conscientious planter is obliged to make the following admissions: that the whole system is one of compulsion; that no ryot would grow indigo if he could possibly help it; that the ryots infinitely prefer to grow their own crops; that the ryots' very best land is often that selected for the indigo; and that they get deeper in debt to the planter year by year in consequence of the loss which attends the cultivation of this crop; that the same price is allowed for the indigo, per bundle, year after year without any reference to the year's out-turn, or the price of provisions, so that the ryot gets a rupee for five bundles whether his crop is a bumper or an entire failure, and when he is now paying 50 per cent. more for every thing he buys than he did ten years ago. No conscientious planter will deny that if he takes the lease of a village, and the resident tenants refuse to accept his "advances" and grow indigo, they are always forced to do so by gross outrages, by the destruction of their crops, the seizure of their ploughs or cattle, by personal seizure, threats, and even confinement. He will admit that, in a vast number of factories, the planter's servants deduct an enormous per centage of the amount due to the ryot for his indigo on account of douceurs and presents; and that if a ryot is paid at a lower rate than one rupee for four bundles he must be a loser, and yet that in many factories he is required to supply five and even six bundles for the rupee. We have before us authentic documents recording all these admissions on the part of planters in the very district in which the recent disturbances have occurred. We

are quite ready to grant the truth of the assertion that the planters oppress the people less than their own zemindars, but what sort of justification is this? The planter is an Englishman, and every act of his is taken by the people to represent the character of the British nation: our national reputation, therefore,—the honour of our Government,—and its hold upon the people of India, are compromised by the continuance of the system we have described. A slight act of oppression on the part of a foreigner is ten times more odious than very great oppression on the part of their own people, as we have seen over and over again in India. What are we doing in India if we do not set before the people an example of justice and impartiality,—a higher standard of conduct than they had before? The British Government cannot afford to allow the great moral objects for which we hold India, our honour and good name, to be tarnished by such conduct on the part of our countrymen.

Even if it could be shown that the ryot does not lose by the cultivation of indigo, why should he be compelled by force to grow that or any other crop against his own inclination? The native tenant can barely live under the most favourable circumstances; and here a foreigner comes in and purchases the power of his native landlord that he may illegally and tyranically force him to grow a crop which as he believes, rightly or wrongly, involves loss and ruin. The Bengal tenantry are not slaves that they should be so treated, but by law and custom as free as any other subjects of the British Crown. We will now let them speak for themselves to our readers in the following extract from a petition which they drew up about three years ago, and which was brought to the notice of the late Colonisation Committee by the Rev. Joseph Mullens, a distinguished missionary:—

Being surrounded by indigo planters in this zillah, the ryots of each village are forced to take advances: if a ryot refuses, lattials (club-men) are sent numberless as locusts, and his cattle are impounded and carried to the factory, or the factory's ploughs are sent, and the ryot's recently sown rice is ploughed up, and indigo sown by force: from fear of this, the ryots rather yield to the evil, and take the advance, though with reluctance. When advances are made, the ryots receive two rupees the beegah, but from the time of leaving the factory to cutting the crop and carrying it to the vats, there is nothing but giving salamis (presents) and bribes, and thus all the money goes away. For to the dewân* eight annas have to be given for salami, to the ameen* and dagiddar* eight annas each; to the ticcah dagiddar four annas, and at the manufacturing time, some eight annas must be given to the various servants. Besides this, if a bullock strays into the indigo, the ryot has with folded hands to pay a fine according to their wishes. If the ryot does not submit to all this, he cannot cultivate any land for the support of his family, nor can he remain in his native place, but must flee from village to village. Even when there is a full crop on the land for which the advance was made, the amlahs,* at the time of the accounts being made up, manage only to pay a fourth part of what is due; consequently the advance not being balanced, the ryot has to sow again, each successive year, for the debt carried against him; and he has to sell crops or produce, in order to pay the rent of this very indigo ground, otherwise he will be beaten to death; besides all the labour of the ryots for indigo is lost labour.

* Factory employés.

We have already recommended that witnesses should be examined before a Parliamentary Committee on the subject of the condition of the peasantry in Lower Bengal; and we will only add now, that among many persons now residing in England who would give most valuable evidence on this subject, there is the late Lieutenant-Governor of Bengal, Mr F. J. Halliday, who, while known to possess an unusually intimate knowledge of this and other cognate questions, has never been accused, by the most bitter enemies of the Bengal Civil Service, of entertaining prejudices against the planters. It is to be regretted that the House of Commons should now be almost deprived of men like Mr Halliday, who could direct the attention of the House to questions like that now before us. Partly by the operation of the Act constituting the Council of India, by which its members cannot sit in Parliament—partly by the difficulty which men, however eminent and distinguished they may have been in India, find in recommending themselves to the favour of popular constituencies—the House of Commons has hardly one man competent to take a useful part in Indian discussions who has the advantage of long personal experience of the country and of official experience.

BELLIGERENT RIGHTS AND MERCHANT SHIPPING.

Mr Lindsay has written an able letter to Lord John Russell on a subject which we have often brought before our readers, the bearing of belligerent rights on merchant ships in time of war. In this letter he explains the difficulty created by the reluctance of the United States Government to abandon privateering, while the President of the United States has indicated the view of the same subject taken by the American Government, in replying to a memorial of the New York Chamber of Commerce, which had contended for the "perfect immunity" from capture of all private property on the ocean in time of war. In these letters we find three distinct views of the subject developed—(1) the view taken of it by the merchants both of England and America, which appears to be one and the same; (2) the view taken by such a Government as our own, which is likely enough to be embroiled in international quarrels and yet has a fair chance of commanding the sea in case of war; and (3) the view taken by a Government like the American, which is unlikely to be embroiled in international quarrels of any importance, and which, if ever so embroiled, is unlikely to be navally pre-eminent at sea.

(1) The English shipowner and the American Chamber of Commerce are agreed in wishing to secure the immunity of private property at sea (not contraband of war) from capture in war. This is said to grant an unfair advantage to private property at sea, as compared with private property on land; but it may fairly be said that if there were no other objection this at least is valueless. Private property, wherever it may be, if far removed from the actual scene of war, and held either in a foreign country or in a remote part of the invaded country, has a very great advantage over the same property held in the immediate neighbourhood of the scene of war. And to declare that at sea it shall be exempt, is merely to extend the area of safety, and cannot be said to be in the least degree more favourable to one class than to another. The merchandise is already exempted from capture if found in a neutral's ship,—where is the partiality in granting to the merchant ship the same immunity which is already granted to the merchandise? We do not say that good reasons may not be given against granting this immunity to private ships: we simply maintain that the argument derived from the apparent partiality of the scheme is wholly without value. The merchants and shipowners of any nation of course contribute to the cost of war in the legitimate way by means of taxation,—and it might as well be argued that mountainous districts should be deprived of their unfair advantage over plain or coast districts, as that ships at sea should not be exempt from capture simply on the ground that shipowners would so gain an unfair advantage over the rest of the people.

(2) The view evidently taken by Lord Palmerston, and apparently by Lord John Russell, is the view of a strong Naval Power, likely enough to be embroiled in international disputes, and reluctant to sacrifice its advantage by putting itsself on a level with a weak Naval Power. Lord John Russell very consistently disapproves entirely of the provisions embodied in the Treaty of Paris of 1856, which rendered enemies' property inviolate in neutral vessels and neutral property in enemies' vessels. This, he thinks, is depriving belligerents of one of the main terrors of war,—and when war is once declared, the more terrible it is to both parties the better. Lord Palmerston, less consistently we think, is committed to the Treaty of 1856, and yet hesitates to carry it out to its natural consequences. He thinks the shipowners should be prepared for the sacrifice for which all classes in time of war must be prepared; and that it would be dangerous for us to give up our privilege of seizing enemies' ships, and so crippling their commerce. But if the Treaty of Paris is to stand,—and no one seems to think of the possibility of retracing our steps,—this privilege is already conceded. We may no longer seize enemies' goods unless it be in enemies' vessels,—and of course the carrying trade of any nation with which we might be at war would be eagerly taken off their hands by some neutral Power, such as the United States.

We should not, therefore, cripple their commerce, but only ruin their shipowners. Into all ports where there was no effective blockade ships could go at pleasure, and come out again, bringing the products of the country. All our effective power would be concentrated on blockades. The real commerce of our antagonist in other quarters would be carried on in neutral vessels, and so be beyond our reach. Is it worth while to make a great stand for the privilege, not of embarrassing an enemy's general commerce, but of embarrassing the class of shipowners?

On the more general consideration, moreover, as to whether it was or was not wise to give up, in 1856, the right of seizing enemies' goods in neutral vessels, we may call to mind that this right has, in practice, not been found a pure advantage to England. It involved us in a dispute with America in 1812, which certainly, at that time, oppressed as we were with the weight of the great French war, was far more injurious to us than the right for which we contended was beneficial. In practice, we suspect the only efficient injury we can inflict on the commerce of an antagonist is through the blockade of its ports. What else we can do is more likely to involve us in disputes with neutrals, than to assist us against the enemy.

(3) The view taken by President Buchanan is the view of a weak Naval Power unlikely to be at war with any strong Naval Power, and prepared to risk much on the improbability. He writes as follows to the New York Chamber of Commerce:—

War is a dreadful calamity, shocking to humanity, and ought to be avoided by all honourable means; but while mankind continue in their present state it will sometimes be inevitable. If, with the small but gallant naval force of this country we should be driven into a war with a nation possessing a navy far more numerous and powerful than our own, we should then be in a comparatively helpless condition without the aid of privateers. We might with almost as much propriety agree to abandon our system of volunteer militia, and trust alone to the regular arms for our defence on the land as to deprive ourselves of the services of privateers, which are our volunteers and militia upon the ocean. Besides, privateers may be strictly guarded from abuses by law, and be restrained within the rules which govern our regular navy.

Neither would the abandonment of war against private property upon the ocean of itself afford freedom and security to our commerce. In order to accomplish this object we must proceed a step further, and obtain the consent of the powerful naval nations that merchant vessels shall not be blockaded in port, but be suffered to pass the blockading squadron and go out to sea. If these should remain blockaded in our harbours, there would be comparatively but little private property on the ocean to protect. A powerful fleet, by blockading the mouth of the Chesapeake, could eventually prevent any merchant vessel from going to sea from any port in that noble bay or its tributaries. So in regard to New York, New Orleans, &c.

If the proposition to abolish war against private property on the ocean were combined with a proposition to secure to merchant vessels a perfect immunity from blockade in any port, then the subject would be well worthy of serious consideration.—Yours respectfully, JAMES BUCHANAN.

From this it is evident that the American President thinks the international law for which the mercantile community of almost all nations wish, is not very likely to prove a practical advantage to the United States, while it is certain to be a very great practical advantage to the commercial rivals of the United States. He would rather keep all things as they are,—and as a set-off against the great risk incurred to American commerce, if England or France should ever go to war with the Union, he would maintain the right of privateering, which he considers as a naval militia or volunteer force. Nevertheless, he intimates that he might concur in the principle contended for, if even the right of blockade were so limited as to be equivalent merely to a local siege, for that is the gist of his proposal. He asks that all merchant ships should be permitted to leave a blockaded port. Otherwise, he says, however safe they may be on the ocean, in case of a war with a great Naval Power, they will probably never get on the ocean at all, but be blocked up at home. This is undoubtedly a proposal which involves great difficulties. In the case of a nation with such a line of coast as the American, the effect would probably be only to change for a time the channels of commerce, since it would be impossible to blockade the whole coast. In the case of Russia, with her few good harbours, to blockade these few is to cripple her whole commerce. But with the United States it would not be so. President Buchanan's suggestion certainly could not be accepted without the most serious deliberation. But the terms which the United States may accept or reject, as the conditions of their assent to the proposed international law, are, in fact, not very material. Once let private vessels, whether neutrals' or enemies', be put on the same footing of immunity on the high seas by European Powers, and the grievance of which our shipowners fairly complain,—that prudent merchants in China and the East look to any rather than English ships as the safest for their goods,—would disappear. What these merchants fear is a war between England and France. If these two countries once agreed to acknowledge the principle for which we have contended, the American ships would lose their advantage over our own.

A BUSINESS-LIKE VIEW OF THE COURT OF BANKRUPTCY.

THE object which the creditors of a bankrupt have in view, is the division of his property. It might seem useless to state this, but a large portion of the time of the Court of Bankruptcy has always been occupied with different considerations. The Court has been required to investigate why the bankrupt has failed, whether he ought to have failed or not, whether he is blameable or not, in what degree he is blameable, whether he ought to have a certificate or not, what sort of certificate he ought to have. All these questions are matters of public policy, or are interesting solely to the bankrupt himself. None of them are material to the creditors: what they wish for, is a prompt, equitable division of the bankrupt's assets.

Unfortunately there is a great practical difficulty in the way of obtaining such a division. The investigation is a complicated one. A bankrupt who has carried on business upon a large scale will almost necessarily have involved himself in many intricate transactions which few men can unravel; he will probably have property in distant parts of the world which it is difficult to realise; he will almost certainly have property of uncertain value which it will be very difficult to find the best moment to sell.

Legal questions, too, are sure to abound. Debts which the bankrupt himself could have recovered with ease, will not be recovered without a long and costly litigation by those who are managing his estate. Very few creditors like to undertake so perplexing a task. Nor have they any great motive to undertake it. The debt of each creditor is ordinarily but a small item in the list of the bankrupt's liabilities; and even if he manages the entire estate, the proceeds of his labour will be divided between himself and other creditors who do not labour at all. Moreover, the task is sure to be a thankless one. Realise it in the best way you can the complaints will still be many. There are special reasons why so much as is hoped for will never be obtained. The first statement of a bankrupt's affairs is almost always too favourable; it is necessarily taken from his own statements, for he is the only person who knows anything of importance about his own affairs, and he himself will almost certainly be more sanguine than he ought to be. He will fancy that his property is worth more than it is; he will believe that he can resist claims upon him which it will turn out that he cannot resist. In consequence, the ultimate dividend is almost always far short of that which is announced at first. Those who have the management of the estate are generally blamed for the issue; they are told that they promised a dividend of fifteen shillings, and that they only paid a dividend of five shillings. No creditor likes to expend time and labour which ought to be employed in his own legitimate business upon a thankless task, which will certainly cause him a great deal of anxiety, which will probably give him great vexation, by which he will mainly benefit persons who stand by and grumble at him.

Accordingly, few individual creditors like to spend much trouble about a bankrupt's estate. But if they don't take the trouble, who will take it? By the original constitution of the Court of Bankruptcy it seems to have been imagined that an officer of the Court would take it. But experience has shown that he cannot or will not do so. The management of a bankrupt's estate is not a matter of mere routine; it requires

prompt action, skilful use of opportunities, much ready zeal and energy. The inevitable difficulties are often considerable, and can only be conquered by vigour and sagacity. In practice, it has been found that a functionary in the Court of Bankruptcy cannot be relied on for these qualities; he will do routine work well, but he will only do routine work. Of late years nobody has expected the official assignee to take any great deal of trouble. It has been generally believed that no officer of the Court of Bankruptcy is fit to be trusted with the realisation of a bankrupt's assets.

Fortunately, a new class of persons is growing up who are quite willing to undertake the task, and who are quite able to perform it. Accountants have become a profession. A principal part of their business is the investigation of insolvent estates; it is their business to grapple with the attendant difficulties; they are able to tell what such and such assets are likely to realise; they will probably know the best way of realising them; they will be very likely to give sound advice as to the claims upon the estate which can be contested, and those which cannot. In a word, they are acquainted with this unpleasant sort of business, and, in consequence, they are able to manage it much better than any one else.

Accordingly, the practical conviction of every one who has had to do with such matters is, that the only mode of managing a bankrupt's estate properly is to place it in the hands of an accountant who is used to the task, to look after him a little, and to pay him well. Unfortunately, however, the law, as it stands at present, throws considerable obstacles in the way of accomplishing this.

First, it requires that five-sixths of the creditors, both in number and in value, should consent to the appointment of certain trustees; and in the event of their not consenting, the estate must be wound up in the Court of Bankruptcy. It is only as the clerk of these trustees that a professional accountant can be employed. Now, five-sixths of the creditors in number and in value is a very large proportion of the entire number, and it is always difficult and often impossible to obtain their consent to the arrangements which are proposed to them. The obstinacy of two or three persons may cause the whole to fail.

Secondly, the law has aggravated this great difficulty by what we must call a monstrosity of jurisprudence. The Bankrupt Acts now in force, indeed, profess to carry out, or at least to permit, private arrangements between a bankrupt and his creditors. They authorise a bankrupt to assign all his property to trustees to be appointed by five-sixths of his creditors. But, by a peculiar absurdity, the law has made this very assignment an act of bankruptcy until five-sixths of the creditors have signed the deed; and until certain formalities, which occupy some time, have been gone through, the whole arrangement may be stopped by a single creditor. The mere attempt to keep the estate out of bankruptcy is an act of bankruptcy, and gives, therefore, the opportunity to a single dissentient creditor to defeat the whole.

Thirdly, the existing law does not provide a proper position for the professional accountant, or give the means of paying him properly. As he is to be the person to be relied upon for managing the estate, he ought to appear prominently and be proportionately remunerated.

Sir Richard Bethell's Bill will materially diminish these defects. Only three-fourths of the creditors in number and value are required to assent to such arrangements as we have mentioned. Even this is a large number, and we should prefer that one-half in number and three-fourths in value had been considered a sufficient proportion. Nevertheless, the proposed alteration is an important improvement.

Secondly, a *bonâ fide* attempt to carry out a private arrangement with creditors, and an assignment of effects for that purpose, is no longer to be an act of bankruptcy. In practice, this change will be very beneficial, and it will remove a gross anomaly from our statute-book.

Thirdly, the three following clauses give the most ample authority to the required majority of creditors to make what arrangements they choose for the management of the estate, and to appoint a professional accountant as trustee, to give him what powers they think fit, and to pay him whatever remuneration they think suitable:—

"423. The Resolution or Agreement embodying the Arrangement may make such Provision for the Management of the Estate, and the Payment of the Dividends, and the Auditing of the Accounts, as to the Creditors shall seem fit."

"430. The Creditors shall apoint a Trustee, who may be required to give such Security, and shall have such Powers, Duties, and Discretion for the Purpose of carrying the Arrangement into effect, for the Management of the arranging Debtor's Property, the Recovery and Compromise of Debts, and otherwise in relation to the Arrangement, as the Creditors think fit; and the Creditors may, if they think fit, appoint, a Committee of Creditors to advise and assist such Trustee."

"432. The Trustee may be paid for his Services in such Manner as the Creditors determine, subject to the Approval of the Court as to the Mode of Payment, and to Taxation as to the Amount."

The operation of these clauses will, we think, be very beneficial. It will enable the creditors, if they agree among themselves, to manage the estate of the debtor in the cheapest and best way; they are to have ready access to the Court of Bankruptcy for the determination of any legal question that may happen to arise; and they will be enabled to engage the services of a professional accountant to act under their inspection, to be constantly employed in winding up the estate, and to be paid, if it should seem desirable, in proportion to the dividend he may succeed in obtaining.

THE BOARD OF TRADE RETURNS.

EFFECT OF THE CHANGE OF TARIFF ON IMPORTS.

The exports for the first three months of 1860 show no very remarkable feature. During the month of March there has been evidently some partial slackness in this part of our trade. The declared value is as follows:—

	1858	1859	1860
	£	£	£
March	9,000,274	11,313,228	10,393,470

And this falling off as compared with the exports of last year during the same month, seems pretty evenly distributed over the whole list of our exports, and of the foreign countries and colonies which are our principal customers. In our exports to British India, the exports of cotton manufactures have diminished in the last month (as compared with the same month in 1859) by more than 200,000*l* worth of goods: and in the last three months by more than 900,000*l* (as compared with the first quarter of 1859),—that is, speaking roughly, by about 30 per cent. And some reaction is visible not only in the exports of cotton goods, but also of our other British manufactures to India.

The woollen and worsted trade seems to be at present one of the most increasing, and the very great and rapid rise in the value of this class of exports to the Hanse Towns is well worthy of notice. We find the declared value of this class of exports in the last four years—we add those of 1857, because the decline in 1858, not entirely recovered in 1859, was caused by the commercial crisis—to be as follows:—

TO HANSE TOWNS IN THREE MONTHS ENDING 31ST MARCH.

	Declared Value.			
	1857	1858	1859	1860
	£	£	£	£
Mixed stuffs, flannels, &c.	68,156	34,517	66,121	73,214
Worsted stuffs	147,631	116,882	257,305	305,017
Woollen and worsted yarn	322,261	231,997	275,881	536,366
	538,048	383,396	599,307	914,597

Showing,—as compared with 1857, one of the most prosperous of years,—an increase of nearly 80 per cent. in the value of the exports of this class of goods to the Hanse Towns.

As regards the imports, the table of computed values is always a month in arrear of the declared values for exports. Up to the end of February, the statement is as follows, and shows a recovered trade:—

Month of February,			Two Months ending February 29,		
1858	1859	1860	1858	1859	1860
£	£	£	£	£	£
5,845,083	9,575,801	10,715,751	10,112,100	13,455,049	15,871,469

But at present our chief interest respects the result to the import trade of the simplification of our tariff effected by the Budget. Of course, the change has only taken effect to a very slight extent as yet; but we may notice the effect on the quantities imported in regard to the following articles.

From many the duty was taken off or reduced on the 7th March; from others on the 3rd March:—

	Landed March.			Entered for Home Consumption.—March.		
	1858	1859	1860	1858	1859	1860
Clocks & watches—Watches No.	9308	9330	16259	...	...	...
Fruit—Currants ..... cwts	...	...	...	23775	36124	87472
Lemons and oranges ... busb	160660	130534	208270	...	..	...
Raisins .... cwts	...	...	...	13805	14456	18860
Hair—Manufactures of hair and goats' wool ..... Value £	11287	23013	46015	...	...	...
Leather—Boots, shoes, and goloshes .....pairs	9156	9973	18564	...	...	...
Gloves.....	...	...	...	461597	541614	1083752
Provisions—Butter .....cwts	30892	26687	48437	...	...	...
Silk manufactures of Europe—						
Broad stuffs (silk or satin).lbs	37695	42234	78576	...	...	...
Gauze, crape, and velvet ...	2634	3748	4798	...	...	...
Ribbons of all kinds	43493	60512	74733	...	...	...
Spirits—Brandy.....gals	...	...	...	83481	100208	210951
Geneva	...	...	...	2171	2345	50715
Timber and wood, sawn and split ..... loads	...	...	...	43597	47399	176739
Not sawn or split.....	...	...	...	34440	29945	95500
Wine ..... gals	...	...	...	551937	635605	1147677

This will show that the change in the tariff has already produced considerable effect, though, of course, one in several ways inapplicable as a measure for future months. On the first reduction or the taking off of duty, much is likely to be entered for home consumption, or imported, speculatively, which will not again be imported in equal quantities. On the other hand, when the importing country is distant, the returns for the first month of the change cannot, of course, show any effect at all on the imports, though it may on the quantities entered for home consumption.

We may remark that the quantities of cotton received continue to be very large. For the month of March the quantity is double that of the corresponding month in last year, and for the three months it is about 75 per cent. more than it was last year.

ORDERS AND DOCK WARRANTS—THE NEW STAMP DUTIES.

The following replies to queries made have been made officially:—

Inland Revenue, Somerset House, April 18.

Gentlemen,—I have laid before the Board of Inland Revenue your letter of the 11th inst., and, in answer to the question therein submitted, I am directed to inform you that an endorsement of a stamped dock warrant operating as a transfer of the property is not chargeable with additional duty. An order for delivery of goods transferred into the name of the new owner, given by the latter, whether by endorsement of the former order or otherwise, requires to be stamped.—I am, Gentlemen, your obedient servant, T. Sargent.

Messrs Pontifex and Wood.

Inland Revenue, Somerset House, April 19.

Gentlemen,—The Board of Inland Revenue have had before them your letter of the 10th inst., submitting questions relating to the liability of certain documents used at your warehouses to stamp duty under the recent Act, and as questions somewhat similar have been asked by Mr Chandler, the Secretary of the London Dock Company, I am directed to transmit to you herewith a copy of the Board's reply to that gentleman.

The Board desire me to observe, in addition to the answer given to Mr Chandler in the matter of "weight notes," that they notice the variance in practice between the London Dock Company and yourselves—namely, that the company issue the dock warrant and the weight note together, whereas your firm issue the weight note first without the amount; which, if it constitutes any difference at all in reference to the question of duty, may be said to be somewhat in support of the view taken by the Board of the liability.

The memorandum or entries on the warrant of deliveries of portions of the goods do not seem to be or to impart an order for the delivery to which penny stamps attach.

That which is termed a "shipping note" does not appear to be an order to deliver goods on a wharf, or in a warehouse, so as to be subject to the penny stamp as a delivery order.

An order by an import merchant to deliver goods before sale or transfer, that is, it is presumed to himself, is not a delivery order within the Act.—I am, Gentlemen, your obedient servant, T. Sargent.

Messrs —— and Co.

Inland Revenue, Somerset House, April 18.

Gentlemen,—I have laid before the Board of Inland Revenue your letter of the 11th inst., submitting certain questions relating to the recent Stamp Act, 23d Victoria, cap. 15.

In reply to the first question, I am directed to state, that where, under the authority of a delivery order, a transfer of the goods has been made into the name of the new owner, any fresh order given by such owner, whether by mere endorsement of the former order or otherwise, is liable to the duty and must be stamped.

2 Warrants issued prior to the Act, not being in their inception liable to the duty, do not require being stamped previously to delivering out the goods.

3. Goods may be delivered out to the holder of the warrant stamped with 3d where no delivery order is necessary, without any further stamp being affixed.

4. The stamp may be cancelled by an authorised clerk.

5. If a warrant or delivery order be issued unstamped, or if goods be delivered out under an order that is not stamped, a penalty is incurred by the person issuing the document or delivering out the goods.

I am to add, with regard to the 6th question, that supplying stamps in the case put by you to parties for the purposes merely of your own business would not require a license to deal in stamps.—I am, Sir, your obedient servant, T. Sargent.

To Messrs Lesch and Neal, Mark Brown's Wharf.

Inland Revenue, Somerset House, April 20.

Sir,—I have to apologise for an inadvertance by which a letter to you was issued from this office in terms which were not sufficiently explanatory, and which appear, not unnaturally, to have caused some surprise when made public.

The letter, in fact, was a mere transcript of the note made by the Solicitor to the Board, on your application, for the information of the Board, and should not have been sent out in that form.

I beg leave now to explain, that the Board are advised by their solicitor that a bill, draught, or order drawn in the United Kingdom is chargeable with stamp duty at the time of its being issued, and cannot have a stamp added to it at any time afterwards; hence, of necessity, the words imposing a duty on such bills, &c., when endorsed abroad, can have no practical operation.—I am, Sir, your obedient servant,

To J. H. C. ——, Esq. T. Sargent.

Inland Revenue, Somerset House, April 17.

Sir,—I have laid before the Board of Inland Revenue your letter of the 13th inst., and in reply to the question therein submitted I am directed to inform you—first, that an order given by the owner of goods to deliver the same to himself or his servant, where there is no sale or transfer of the property therein, is not liable to duty under the new Stamp Act, 23d Victoria, cap. 15.

In reply to the second question, I have to observe that it is not essential to the liability of a dock warrant to duty that it should be assignable or negotiable, if it evidences the title to goods in the docks it is charged—a transfer certificate does this, and it is therefore subject to the duty of 3d.—I am, Sir, your obedient servant, T. Sargent.

Mr William M'Cannon.

THE BALANCE-SHEET.

An Account of the gross public income of the United Kingdom of Great Britain and Ireland, in the year ended the 31st day of March, 1860, and of the actual issues or payments within the same period, exclusive of the sums applied to the redemption of funded or paying off unfunded debt, and of the advances and repayments for local works, &c.

Treasury, April 17, 1860. S. LAING.

Agriculture.

SHEEP-BREEDING.

SHEEP have with justice been considered for many years past the "right arm" of the farmer occupying certain kinds of land, and upon most soils, by some management or other, sheep may be made to contribute largely to successful farming. But it is only on dry soils where turnips can be consumed on the land, and where the flocks can be continued on the arable land during the greater part of the winter, that a breeding flock can be kept with eminent success. On the chalk hills, the sands, and the gravelly soils, which for the most part require little or no draining, sheep may be brought at an early age to a size and condition which the occupier of stronger and better, although in the winter colder, soils in vain attempts to rival. Yet even on these soils sheep may be fed and even bred with advantage, if care be taken to adapt the system pursued to the peculiarities of the soil and climate. Hence sheep-breeding is a theme which excites the highest interest amongst English farmers. Of late years the high prices obtained for both wool and mutton have given more than ordinary impulse to this branch of husbandry.

To go amongst our flockmasters in the various districts, and see the fine animals they produce by very different methods and with very different sorts of sheep, would satisfy the most devoted follower of any system of sheep farming that there are other systems besides his own well fitted to render sheep profitable. The great practical question of the day, however, turns on the comparative merits of pure-bred or cross-bred sheep. The discussions on this subject, while exhibiting considerable practical skill and business-like activity, are for the most part characterised by some confusion of thought in reference to the principles of breeding. Many intelligent farmers, with good stock farms, and who are fully alive to the truth, long since enunciated by "Nimrod" in reference to hunters, that "more than half the goodness of an animal goes in at the mouth," finding that with the numerous useful breeds of sheep in this country they can easily select animals for crossing, which, with a constant introduction into the flock of fresh blood, produce great supplies of wool and mutton, jump at once to the conclusion that cross-breeding is, *par excellence*, the right method of sheep management. That this is a mistake needs but little argument to prove, and, in truth, the practice of the great body of farmers, who commonly keep the breeds of sheep best adapted to their respective localities, strongly corroborates this view. Nobody has put the matter more clearly than Mr Valentine Barford, in his communication to ourselves which we published in our number of the 7th instant. That letter was drawn forth by some remarks on his flock of Leicesters which we had quoted from Mr Spooner's paper on "Cross-breeding," wherein his sheep were stated to have become of small size from his persistence in close breeding. He says:—"Half a century of experience has convinced me, where two nearly related animals are true in form, sound in constitution, and I am sure they have no hereditary tendency to disease, in-and-in breeding does not induce degeneracy, and therefore I have no hesitation in coupling them. I think relationship is a consideration of much less importance than form and constitution .....Purity of descent, when combined with true form, becomes of immense value, and which increases with every year the breed is maintained." Mr Barford denies that his sheep are small, and adds "An animal of true symmetrical proportion always appears smaller than he really is, and I invite every one before giving a decided opinion to measure the girth, length, &c., of mine, and compare them with others." Of course, having a large flock, he has considerable opportunity of selection, and thus may easily maintain his flock at a high standard without the introduction of alien blood. Our own observation lead us to the belief that there is some truth in Mr Barford's remark, that most of the Leicester breeders have from time to time used Cotswold or Lincoln blood in their flocks with, we must confess, great advantage to the general character of their sheep. But the truth is, that the Leicester, the Cotswold and the Lincoln, though with distinctive characteristics, partake so much of the same qualities, that the produce of any two of them can scarcely be deemed cross breeds. At all events, such cross-breeding is something wholly different from the violent crosses between long-woolled and short-woolled, white-faced and black-faced sheep, which some agriculturists imagine may be perpetuated.

In connection with this subject, Mr Charles Howard's paper on "The Merits of Pure-bred and Cross-bred Sheep," read at the London Farmers' Club, deserves a passing notice. Mr Howard gave some historical notices of the various breeds of English sheep, and the progress made during the last thirty years in sheep husbandry, but we did not find anything very conclusive on the questions recently raised, and of which from its title the paper might have been expected to attempt a solution. Of the different pure breeds Mr Howard gave a fair and practical account, but, though professing to hold an indifferent hand between the merits of pure and cross-bred sheep he obviously inclined to the latter, of which we hear he is an extensive breeder. He then adverted to cross-breeding, saying that many farmers contended "that it is not desirable to go beyond the first cross, and the most successful and common mode pursued is to use a long-woolled ram upon South or Hampshire Down or other dark-faced ewes." The objection to this plan is that "all the produce is sold off annually, and the breeder is driven into the market every year for ewes, which are mostly the drafts of other people's flocks.....besides there is a want of uniformity in the lambs, some taking after the sire and others after the dam." To attain the advantages without the inconvenience of this hybric sheep-breeding, many attempts to create a sheep of fixed type, having much the same character as the first cross, have been made. Mr Howard, taking his account of these experiments from the somewhat sanguine experimenters, assumes that such attempts have proved, or will ultimately prove, successful. This we greatly doubt, though there can be no question that, in the hands of the earnest men who are trying to establish as a permanent breed of sheep an animal similar to the cross between a long-wolled and black-faced sheep, some very useful flocks will be produced, and may perhaps, to some extent, permanently modify the sheep in some localities. The districts in which the Oxfordshire Downs, as a cross between Cotswolds and Downs have been designated by their breeders, are chiefly bred, seems to be one highly favourable to sheep, and it is possible that there results may be obtained which would not follow in districts less suited to sheep. Thus, in the conversation which followed the reading of Mr Howard's paper, Mr Cother, well-known as a breeder and auctioneer of Cotswold rams, said "that much depended on climate, soil, and other circumstances connected with particular localities." He lived in the district of the "Oxford Downs," and "had found that about five miles North of Oxford the Cotswold sheep almost entirely ceased, persons who had commenced breeding them there having gone back to the old sort. There was a chain of land running from about East to West, and embracing an area of about 25 miles long and 14 or 15 broad. In that district, the breed of which he was speaking (Oxford Downs) prevailed to a considerable extent, the soil being that which intervened between the flint and chalk of the Berkshire and Wiltshire hills, and the stone and red lands of Oxfordshire, Northampton, and Warwickshire." It is, in fact, a tract of land with very dry gravelly subsoil. Mr Cother did not estimate very highly the information they had obtained that evening as to "the relative values of different breeds of sheep."

Mr Thomas, of Bletsoe, Bedfordshire, stated that in that county he had commenced with 200 pure Leicester ewes. These he crossed with Lincoln rams, afterwards he used Hampshire Down rams, but found his flock lost some of their early maturity. He then used Cotswold and Shropshire Down rams, by which the early maturity was restored. Of course this is only a modification of the plan of cross-breeding for the butcher, *i.e.* one cross, for it will be noticed that under such a system the flock, the ewe lambs being kept, must be in a constant state of transition; sometimes be

coming almost black-faced, and then again, with Cotswold rams, reverting to the long-woolled character. No doubt wool and mutton may be got in this way where the farmer can resort to well-bred flocks, but such a system has nothing to do with sheep-breeding, that is, producing lambs like the parent stocks.

An illustration of the difficulties which beset breeders from other than pure-bred stocks, where qualities of two parents differ materially, is found in the remarks of Mr Willoughby Wood, in the *Field*, on breeding hunters, where he says: "It is a problem almost as difficult in breeding horses as in mechanics to combine power with speed." And, after describing certain kinds of roadster mares as adapted for breeding, and also "well-bred hunting mares up to considerable weight," he adds: "From these (the well-bred mares) it is reasonable to expect produce of the highest excellence, yet, paradoxical as it may appear, there is more uncertainty with regard to the quality of their offspring than is the case with the class of mares we have last been considering"; that is, stout roadster mares. And "when sufficient breeding already exists on the dam's side, our object is not to gain blood, but to *preserve* power, action, and symmetry.....But in proportion as we multiply crosses of blood, is the danger of losing substance."

Be it observed, that this greater expectation of breeding a good hunter, of combining some of the speed of the blood horse with much of the power of the draft horse, from a thorough-bred horse and a stout active mare without breeding, rather than a mare herself well but not thorough-bred, is very analogous to the benefit derived in sheep or cattle from a first cross, but inasmuch as the object sought in the former case, a combination of power and speed, is much more difficult of attainment than the more simple one of producing good fat meat, the process of hunter-breeding is somewhat precarious.

Literature.

La Rome des Papes: son Origine, ses Phases Successives, ses Mœurs Intimes, son Gouvernement, son Système Administratif. Par un Ancien Membre de la Constituante Romaine. Traduction de l'ouvrage Italien inédit. Premier volume. Bale: Schweighauser. London: John Chapman. 1859.

In the host of books and pamphlets which has invaded the literary market on the subject of the States of the Church, it is a matter of congratulation to meet occasionally with a book such as the above, which condescends to details, and does not quite overpower our senses with the mysticism of the new Franco-Papal school of philosophy. The "*proscrit*" who, in this volume, claims the attention of Swiss and English readers, does so on the express ground that he is describing what he has himself seen and heard from his earliest years, and that his opportunities of observing the real state of things have been unusually large, in consequence of the position occupied by his family at Rome and throughout the Papal States, and his own admission within the precincts of the Papal administration. Of course, as he candidly admits at the outset, a *proscrit* must necessarily be looked upon as a prejudiced witness; but he seeks to remove this objection by declaring that he will say nothing without giving his opponents the means of testing its accuracy by the ordeals of time and place, and confronting it, if they are able to do so, by rebutting evidence. We suspect that the Papal partisans will be wise enough in their generation to avoid any such definite issue, and will confine themselves to vague and general contradictions, trusting that this neglect on their part may be imitated by the general public. It is to be regretted, on this account, that the volume, since England was selected as one of its two places of publication, was not translated into English rather than into French. There is a very large class of readers in this country to whom the difference of its appearance in an English or French dress would just determine whether they should undertake its perusal or not. In an age so prolific of books as the present, a little additional trouble exercises a very important influence on the choice of the reader between different works. It is, however, from works such as this that we are able to arrive at the only clear notion of the state of things against which the Papal Legations, whether justly or unjustly, have protested by their formal separation from the Government of the Holy See.

The author begins by controverting the common assertion, that to the Papacy Rome owes a second career of greatness. On the contrary, he affirms that it is to the name of Rome that the Papacy is indebted for its marvellous influence over the mind of Christendom and the unparalleled success of its spiritual pretensions. Perhaps the negative is put a little too strongly. It is quite true, as the author goes on to observe, that the absorption of Rome in the Papacy was a continual and insuperable obstacle to the consolidation of a Kingdom of Italy. The Italians were deprived of their natural head, and naturally enough became split up under a variety of secondary capitals. But it is quite another thing to say that Rome could have hoped to attain to a second period of such European importance as the head of a new Italian Kingdom, as she did as the seat of the spiritual head of Christendom. No doubt the Romans derived no little satisfaction as well as self-esteem from retaining in this new, though ambiguous manner, the old leadership of the civilised world which they forfeited at the downfall of the Roman Empire. The misfortune was that the Romans deluded themselves with this imaginary participation in the revived glories of Empire, while their own vital energies remained suspended, and the functions of free citizens were delegated to a sacerdotal class, to whom the happiness of the Roman State itself was a mere *bagatelle* compared with the vast schemes of spiritual domination in which its ambition was centred. The second age of the greatness of Rome was one of the social and moral degradation of the Romans; and herein lies its radical fault and crying sin.

We must pass over the author's sketch of the rise of this system of ecclesiastical administration, and take our readers at once to the completed edifice—the "Rome of the Popes." We must confine ourselves to a few facts culled nearly at random, which give something like an idea of what *is said* to be the general working of the system. The "confessional" is not a very popular institution in this country. In Italy it is not likely to be much more so. When the archives of the Holy Office at Rome were inspected in 1848, there was found there a series of reports regularly transmitted from the Bishops and Superiors of the religious orders of the confessions with which they were habitually intrusted. Under the Government of Louis Philippe, the Pope proposed to send a certain Nuncio to Paris who already acted in that capacity at a secondary court. Louis Philippe declined the honour of this prelate's presence, on the ground that his mode of life was too licentious for him to be the representative in France of the Catholic religion. The Holy See took no offence at this plain statement, but sent another Nuncio whose character was less notorious. The rejected nominee was sent to edify the inhabitants of another capital. Cardinal Ostini himself once related to the author, how while he was Nuncio at Vienna, he was surprised one evening in the streets by the Emperor himself. He felt a tap on the shoulder, and, turning round, he found himself face to face with the Emperor Francis, who was followed by an aide-de-camp. Half seriously, half in jest, the Emperor said to him, "Upon my word, I did not expect to meet at this hour, alone and in this dress, Monsignor the Nuncio: I recommend him to return to his palace." The author gives a very numerous collection of stories still more scandalous, for the truth of which he vouches, and which, if they are not entire inventions, go far to prove that immorality is no bar to advancement in the Sacred Conclave. "The curates are at Rome under the rule of a Bishop who is called Vice-gerent; he is to the Cardinal-Vicar what the latter is to the Pope, as *Bishop of Rom* Of all the dignities which are accumulated on one man, the Sovereign Pontiff, it is worth remark that this last is the only one which the Church strictly bestows on him; all the others he has of himself arrogated to himself, and of all these charges, that which is his true office is also that with which he occupies himself least. The Roman people sees in the Pope its Sovereign, the Church its Universal Chief; the Bishop of Rome is the Cardinal-Vicar, and the functions of the Bishopric are, officially at least, exercised by the Vice-gerent."

What the state of the people of Rome and the Papal provinces is likely to be when governed despotically by a set of men open to the common imputation, at least, of such vices as those described in this volume, and when shut out from every avenue of power and social or political influence, except that offered by the adoption of the ecclesiastical order, it is not difficult to imagine. The selfishness and indifference to all but personal advantages which become the usual accompaniment of a dignity sought for with such motives and exercised under such conditions, we can well believe in, even without the voucher afforded by the detailed revelations of the present volume. We would recommend those of our readers who have any curiosity or doubt as to the working of a purely priestly rule to turn to our author's pages, and read there what the Romans say at Rome of the Roman Ecclesiastical Administration.

The Volunteer Movement: its Progress and Wants. With Tables of the Volunteer Corps throughout Great Britain and of their Expenses. Macmillan and Co. 1860.

This pamphlet has been some little time before the public, and we owe our readers an apology for having delayed our notice of it. It takes the shape of a letter addressed by Mr Dudley Baxter to Lord De Grey and Ripon. By the diligence with which the writer has collected all the ascertainable facts connected with the Volunteer Movement, by the sobriety of his inferences from those facts, and by the sound good sense which marks his practical suggestions, Mr Baxter entitles himself to ask a hearing from his countrymen and from the War Office. He has carefully mastered the subject on which he writes.

Taking, as the basis of his calculations, "the Table of Volunteer Corps in the 'Army List,' and reported in the *Times* to January 1, with their reported or estimated strength," Mr Baxter judges the number of effective volunteers then enrolled, in England and Wales and Scotland, to have been 73,794. Of these, 6,716 belonged to the artillery, and 67,078 were riflemen. The proportion of volunteers to every 1,000 inhabitants was thus 3.5. While in Scotland the average of volunteers was 5 for every 1,000, no English county showed more than 4½ per 1,000. In the majority of English counties, indeed, the average did not much exceed 2½ per 1,000. "The more important maritime counties,

both in Scotland and England, have a higher proportion than the inland counties." "But," Mr Baxter observes, "the most important practical inference is to be drawn from examination of the cities and towns." Premising that by CITIES, Mr Baxter understands "places of more than 20,000 inhabitants," by TOWNS, "places between 20,000 and 3,000 inhabitants in England, and between 20,000 and 1,500 in Wales and Scotland," and that he includes in the COUNTRY "places below 3,000 inhabitants in England, and 1,500 in Wales and Scotland," the following conclusions result from the data afforded by population returns and the volunteer reports:—

Of the CITIES,—which comprise one-third of the population of Great Britain,—nearly the whole have joined in the movement.

Of the TOWNS,—which comprise rather less than a third of the population,—nearly half the larger ones and a third of the smaller ones have joined in the movement.

Of the COUNTRY,—which comprises rather more than a third of the population,—not one-twentieth part has joined in the movement, so far as actual volunteers are concerned.....We are [therefore] obliged to conclude that more than 10,000,000 of our population are taking no appreciable part in the Volunteer Movement.

More minute examination of special towns evolves what Mr Baxter rather ambitiously calls the "law," "that the conditions most favourable to the Volunteer Movement are the concentration of money and young men of the upper and middle classes. As these are generally found in conjunction in large towns, it follows that large towns are more favourable to volunteering than small ones. That is to say, the chance of a town joining in the Volunteer Movement is in proportion to its size."

It might, indeed, have been confidently anticipated, that a thin and scattered, a less enterprising and a less wealthy population, would, for any given object, combine in smaller numbers, than an equal population, more densely packed, more enterprising, and more wealthy. To say this is to say in general terms what Mr Baxter has alleged in detail with reference to the condition of the Volunteer Movement at the time of his writing. Returns, brought up to the present day, would, however, we have reason to believe, while leaving the general fact of the volunteering superiority of cities over towns, and towns over country places, where it was, modify the proportions stated above, to the advantage of the latter. They would show that towns of moderate population stand now in less marked contrast to the larger cities than they did; and that the country districts have, in like manner, improved their position with regard to the middling towns. It is natural that the great centres of population, intelligence, and capital should take the lead in a movement which demands all these,—that they therefore should be first in the field. But gradually the smaller places are following their lead, and, as the movement goes on, will enter into it more and more completely. The present is the "age of great cities." But the impulses which begin there do by degrees spread beyond them, and embrace finally the outer barbarisms of rustic populations. So it is, and will be every day more and more with the Volunteer Movement. We do not speak altogether without book in the matter; and we have no doubt that the experience of every district in the kingdom will confirm what we have said.

Mr Baxter attributes the different degrees of progress made by the Volunteer Movement in the towns (according to their population) and in the country, to the single fact that "a volunteer corps is an expensive thing, and beyond the means of the poorer places." We believe that he lays too much stress on this circumstance. He would diminish the expense of the corps by relieving the members from the necessity of providing at their own cost for the ground and staff. "I suggest," he says, "that the ground and butt should be provided by the county or the parish, or at least that they should have the right of levying rates to pay for them, and that there should be a statutory power to take land and compensate the owners." This suggestion, if carried out, would remove the great difficulty experienced, in most *inland* places, of finding land affording a sufficiently wide and safe range, and sufficiently near the head quarters of the corps, as a practising ground. The appointment of a permanent instructor as staff sergeant for every volunteer corps, and of a sergeant-major for every five companies, which should be united into a small battalion,—the institution of a system of prizes, as in the regular army, for the best marksmen in each corps,—and the supply of ammunition to a larger extent than is now the case,—form the items of an expenditure which, in Mr Baxter's opinion, the Government should take upon itself. By elaborate statistics, he shows that the expenses of a volunteer corps thus aided will not be greater than can be reasonably expected to be borne, even in places of small population or wealth. If unrelieved of some considerable portion of their present liabilities, the volunteer corps in such places will, he thinks, when the first enthusiasm is over, gradually drop off and die out.

Mr Baxter does not advert to those more general considerations, of political and social bearing, which, if not, in strictness, belonging to his subject, are yet in close connection with it, and are naturally suggested by it. It is not our intention, in this brief notice of his pamphlet, to supply the deficiency. We will only say now, that, in spite of what is commonly alleged as to the impossibility of volunteer troops ever becoming a sufficient substitute for regular forces, we cannot but think that the movement which has just been initiated is likely, if it be properly fostered and encouraged, and not suffered to degenerate into mere playing at soldiers, to present in time the solution of a problem which has been the despair of statesmen. There is no doubt that our present army is inadequate for the protection of England. This is admitted. It is found impossible to raise the number of men voted by Parliament. Ten thousand of them exist only on paper. The traditional English jealousy of standing armies would be a serious obstacle to any very large augmentation of the regular troops, if such augmentation were otherwise practicable. The special aversion to the only means by which, confessedly, such great increase could be effected,—the conscription,—is a further impediment. The Swiss army is a sufficient answer to the objection that unprofessional soldiers can never be the main reliance of a country even for purposes of self-defence. The Americans at Bunker's Hill, the civilians in the Indian mutiny, the London train-bands at the battle of Newbury, show what irregulars can do. At a time, moreover, when sedentary pursuits employ a continually increasing proportion of the people, it is especially necessary that some strong counteraction should be found to the injurious bias which such pursuits (exclusively followed) are sure to give both to mind and body. The spread of the rifle movement will do much to revive that love of manly exercises, requiring both strength and skill, for which our people were once so famous, and which is not altogether eradicated from the national character, though among the middle classes it is little cultivated and encouraged. Again, in spite of what may be said as to the necessity of making the art of war the vocation of a distinct profession, the citizen is only half a citizen who is not trained and willing, in case of need, himself to take up arms for the defence of his country. That the Volunteer Movement, if it be wisely conducted, will strengthen the patriotic feeling of a common nationality among the subjects of the English Crown, and do something to awaken them to a sense that there are other interests as sacred as those of the money-getting which it temporarily interrupts, we very strongly believe and hope. We see in it a great experiment, which may issue in our deliverance from some of the most threatening evils that beset us, as a people, alike from within and from without.

THE COUSINS' COURTSHIP. By JOHN R. WISE. 2 Vols. London: Smith, Elder, and Co. 1860.

IN spite of the indulgence which novel-writers sometimes think it necessary to claim for, and which critics less frequently award to, "first attempts," it very often happens that such attempts need indulgence less than the later efforts of the same authors. It would be easy to name more than one writer of the highest eminence whose fame rests, and is destined to rest, on his earliest production. Those especially, who have not been tempted into authorship until comparatively mature years, who do not write as professional *littérateurs*, but to express and embody the ideas of life which experience and reflection have developed in them, often achieve at once a success which subsequent essays fail to sustain. The first work is written because the writer had something to say; in it he delivers his soul; he speaks out the thoughts and truths which are most native to him, and have strongest hold upon him; he delineates those types of character, which, from sympathy or aversion, from intuitive insight or opportunity of observation, he best apprehends. The second work is written because the first has made a hit,—at the suggestion of ambition or the booksellers, rather than from the promptings of his own mind. The result, compared with the rich harvest of the first, is "as the gleaning grapes when the vintage is done." The old story is set forth over and over again, with a few changes of costume and circumstances. *Toujours perdrix*, is a complaint which the most skilful *cuisine* will not silence. If the writer, warned of the danger and afraid of the reproach of self-repetition, quits his native heath for fresh fields and pastures new, he too often finds that he is not at home there, and this second mistake is worse than the former. It would be easy, if it were necessary, or if this were the place to do so, to illustrate these remarks by reference to many eminent authors, living and departed. Other "first novels" deserve and attract attention rather for the promise they hold out for the future than for actual performance. They display good gifts, needing only cultivation in themselves, and experience as to their application, in order to accomplish results gradually more and more excellent. Mr Wise's story, with the pleasantly alliterative title, belongs rather to the second of these classes than to the first. It is by no means, however, a work of *mere* promise. Though there are clear signs in it of greater powers than are actually put forth, its intrinsic merits are considerable; and novel-readers who neglect it for works in greater demand, perhaps, at the circulating library, or more ecstatically bespattered with praise by the purveyors of indiscriminate laudation for publishers' advertisements, will certainly lose some hours of pleasant reading, and probably make a very bad bargain. Mr Wise writes, unmistakeably, as a scholar and gentleman, in good, clear, unaffected English; his characters, though sketched occasionally in somewhat faint outline, possess life and individuality; his descriptions of scenery have the real hues and perfumes of nature on them, and fall refreshingly, like a breath from the country, on the reader "in populous cities pent." Except in writers of the highest class, it is rare to find a sense of nature more keen and fresh, and an apter power of reproducing in words her quieter aspects, than are displayed in these volumes.

The variety of the book is another attractive feature, purchased, we must admit, at some cost of unity of design. Country life, with its in-door pursuits and out-of-door sports; Oxford life, with its dons, tutors, and freshmen, its examinations and wine parties, its boating and "commemoration"; author's life in London, with its ups and downs, and here and there a glance at publishers' rivalries, and sketches of the domestic economy of periodical literature,—are amusingly and spiritedly depicted. The gem of the book is, however, the character of the heroine, Minnie Neville,—a kind of refined and more feminine Die Vernon,—equally remote from the fast young lady of the Kate Coventry order, the morbid, self-consuming young lady of the degenerate Jane Eyre and Lucy Snowe type, and the tearful, trustful, and decidedly weak-minded young lady whom Mr Thackeray, in his more genial moments, especially favours. In these business-like columns, our infrequent notices of works of fiction are necessarily confined within narrow limits, or we should be glad to let Mr Wise speak for himself by extracts, and to give some glimpse of the structure and incidents of his story. As it is, we must content ourselves with these general remarks, and a strong recommendation to the reader to buy or borrow "The Cousins' Courtship," and make acquaintance with it at first-hand. Our limits, however, form no excuse for omitting to discharge the critic's first duty of fault-finding. The fact that the author of "Adam Bede" is pleased to speak of the county of Warwick as *Loamshire*, is no sufficient reason why Mr Wise should speak of *Ironshire*, *Woodlandshire*, *Fentonshire* and *Cottonhamshire*, when for aught we can see Worcestershire, Hants, Lincolnshire, and Nottinghamshire would serve his purpose as well. He may be right in disguising rival periodicals under the names of the "Temple Review" and the "Strand Magazine," but why he should feel any reserve as to speaking of English counties except under an *alias*, we cannot see. They are not sensitive, and he reveals no secrets about them. Because Mr Thackeray founds a new College at Oxford,—St Boniface—for the special reception of Mr Arthur Pendennis, Mr Wise thinks it necessary to open at the same seat of learning the institutions of St Matthew's, St Mark's, and St Greenacre's. Mr Anthony Trollope is too fond of bestowing on his clerical heroes ridiculously impossible names, expressive of their personal character and ecclesiastical leaning. Therefore Mr Wise introduces us to the Reverend Messrs Surplyce, Drinkwater, Gravestone, Shroud, and Benison,—the last, of course, the good clergyman of the tale. In the favourite authors to whom these blemishes are original, they escape our attention, *veluti Balbinum polypus Hagnæ*; but when assumed at second-hand, they are unredeemed disfigurements. These are, however, but superficial faults, and may easily be remedied. That we have found it necessary to dwell upon such minor blots, is itself a compliment to the general merit of "The Cousins' Courtship."

Foreign Correspondence

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

Several newspapers I see announce that, in compliance with the wishes of the English Government, the French Emperor is about to abolish all the differential duties in favour of French shipping; and the belief that such is his intention appears to be causing a certain degree of excitement among shipowners. From, however, inquiries which I have made in a high quarter, I am strongly inclined to think that no design of modifying, at an early date, the duties on shipping, is entertained by the French Government. The truth is, that the large Customs reforms about to be carried out, both by means of laws and of the commercial treaty with England, are quite as much as can be got through in one year; that, indeed, measures so vast should have been conceived and executed in the space of twelve months would at one time have been considered absolutely impossible. These reforms effected, the Government will have to deal with the sliding scale on corn; and that will, it is thought, form work quite enough for another year. In the year following the Government may take in hand the shipping duties; but I am assured that it is hardly likely to touch them before. In answer to a remark that so much delay in this matter would, perhaps, cause a certain degree of dissatisfaction in England, I was reminded that England herself did not meddle with the navigation laws until her other commercial reforms had been completely accomplished.

It is, I understand, quite true that not long after the treaty of commerce with England was concluded, the French Government caused an intimation to be conveyed to that of Prussia that an application for a similar treaty between France and the Zollverein would be favourably received; but I am informed that Prussia expressed the opinion that the Zollverein was not desirous to enter into a treaty, and that in consequence nothing came of the French overture. Both surprise and displeasure are expressed here at this lukewarmness of Prussia in a matter of so much importance. To Belgium, I believe, a similar proposition was made, and it was very favourably received, and is likely to be acted on. Any treaty which may be entered into between France and that country will not affect England, inasmuch as article 19 of our convention stipulates that any reductions of tariffs accorded to a third Power shall be extended to her.

No date has, I understand, yet been fixed for the meeting of the Superior Council of Commerce, to which is intrusted the task of imposing the specific duties on English goods to be imported into France under the treaty. The French Protectionists and Prohibitionists are, as I told you before, preparing to make a vigorous struggle to obtain from the Council the highest duties possible; and English manufacturers should accordingly be diligent in getting up information calculated to answer them, and in putting it into a presentable shape. They should, in particular, well consider the question whether it will be for their interest to have *ad valorem* or specific duties imposed; for, though the ostensible object for which the Council is to assemble is to transform the *maximum ad valorem* duties of 30 per cent. fixed by the treaty into specific duties, there is nothing in the convention to prevent the adoption of *ad valorem* duties below that figure. Mr Cobden is at present in Paris, and we may be sure that he will exert the well-merited influence he possesses here to make the treaty as advantageous to England as possible.

The Legislative Body is far from displaying the activity which is desirable with respect to the Bills on the cotton, wool, coffee, and sugar duties; but I believe that the Government will cause them to be hastened, so as, if possible, to bring the new duties into operation from the 5th May, or as soon after that date as can be.

The Minister of Finance, you are aware, proposes to make from next year a very large increase in the duties on alcohols. But in the vineyard districts it is contended that such a measure would be most unjust to the wine interest, which already pays heavy taxes. In proposing the increase, the Minister declared that it would not diminish the consumption, inasmuch as alcohols are less affected than any other article by the duty they pay; but the Agricultural Society of the Herault, which has petitioned on the matter, says that the augmentation will cause a large falling off in the consumption; and certainly it is hard to believe that the levy of an impost of 24,000,000f on one single article, which is the sum the Minister wants to get, will not check the sale of that article.

The same Minister proposes a duty varying from 25c to 12f the hectolitre on the import of foreign wine. But the Commercial Reform Committee of Bordeaux has had the good sense to publish a declaration to the effect that this duty would form a sort of protection to the wine trade, and that that trade wants nothing of the kind. This repudiation of protection to wine by the chief town of a great wine district is a sign of the times not without importance.

Apropos of Bordeaux:—that city is now mourning the death of M. Duffourq-Dubergier, who was for many years its Mayor and President of its Chamber of Commerce. He was a distinguished champion of liberal commercial policy, and powerfully aided Michel Chevalier and Bastiat in the efforts they made some years back to spread economic principles by means of associations and public meetings on the English plan.

The Government, from fear of the paper-makers, does not dare, at least for the present, to take off the prohibition to export rags. Yet it has presented a Bill to the Legislative Body for removing the prohibition to export bark for tanning. Surely there is strange inconsistency in this; and surely there is a lack of moral courage in submitting to the exigencies of the paper-makers about rags, when the tanners, who are just as clamorous as they, are braved about bark.

The report read at the recent meeting of the Credit Foncier shareholders, stated that the total number of loans effected in the course of 1859 was 358, and the amount of them 33,857,300f. Of these, 343 amounting to 26,386,300f were made for long periods; the rest for short ones. The total amount of loans for long periods made by the company since its establishment up to the end of last year was 139,923,630f, of which 12,635,663f have been paid back. The total profits of the year were 8,926,884f, and the expenses 6,205,467f. Out of the balance (as already stated), a dividend equal to 10 per cent. on the paid-up capital was declared; and, in addition, large sums were carried to the reserve or otherwise employed.

The Directors of the Eastern Railway announce that they will, in the approaching annual meeting of shareholders, propose that the dividend for 1859 shall be 38f 70c. Of this, 20f were in November paid on account; and the balance, 18f 70c per share, is to be paid from the 1st of May. At a meeting of the shareholders of the Southern Railway held yesterday, a sum of 17f per share, in addition to 10f already paid, was ordered to be distributed. At a meeting of the shareholders of the Dauphiné Railway held yesterday, the accounts were approved of, and the raising of a loan of 12,000,000f was authorised.

The shareholders of the "Compagnie Immobilière," of Paris, have also held their annual meeting within the last few days. The receipts, after deducting all outgoings, were stated to be only 429,720f; and, accordingly, 50,380f were ordered to be taken from the extraordinary reserve, so as to enable 2f per share (the share is of 100f) to be distributed, in addition to 5f already paid. The future prospects of this company were represented in a very favourable light. It is to it that the famous Hotel de Louvre belongs; and it was stated that this hotel (including the rents obtained from the letting of shops) realised last year a clear profit of 941,301f, which was 24,000f more than in the preceding year.

The company of the Petites Voitures of Paris, which from bad

management fell into a deplorable plight, also held its annual meeting a few days back. Its profits for 1859 were stated at 647,547f but they were less by 784,561f for the liabilities, and accordingly no dividend was declared. Nevertheless, the shareholders seemed satisfied to learn that the situation of the company is improving.

A matter which has excited some interest has just been decided. This matter was the basis on which the Paris to the Mediterranean railways should be amalgamated; and the decision come to by a commission of arbitrators to whom it was referred is, that the average receipts of the two lines in the years 1860 and 1861 shall be taken.

An event which has created considerable sensation on the Bourse must be noted:—the condemnation by the tribunal of Correctional Police of a stock-broker, of the name of Sauvage, to 120*l* fine and dismissal from his office, for having, in violation of the law, made Stock Exchange speculations on his own account. The broker has appealed to a superior court against this condemnation, and the Minister of Finance objects to it, on the ground that he alone by law has the power to dismiss a broker; but what makes the matter interesting in the eyes of the frequenters of the Bourse is, that if the condemnation is valid, the laws relative to that establishment must very shortly undergo a very serious modification, inasmuch as there is not a single broker who does not, in one way or another, "speculate on his own account."

The following are the Bourse quotations of the week. It will be observed that the Credit Mobilier presents a large decline. This is owing to the statement (apparently authentic, though not official) that the dividend for the year 1859 will only be 12f 50c (10s) a share:—

The following is an account of the markets:—

FLOUR.—Owing to large demands from England, to an almost general rise in price of wheat, and to long-continued bad weather, a marked advance has taken place in quotations at Paris, they having been yesterday 59f to 59f 50c the sack of 159 kilogs for inferior sorts; 57f to 58f for good; and 54f 50c to 57f for ordinary. As to the four marks, they have been in demand, and prices yesterday were firm at 58f 25c to 58f 50c for the current month and for May; June, 59f 25c to 60f.

WHEAT.—At Paris, yesterday, good sorts were 34f 50c to 35f for the sack of 120 kilogs; choice, 35f 50c to 36f; ordinary, 33f to 33f 50c. Towards the close of business the market was less firm than at the beginning. As to the provincial markets, not fewer than 135 present a rise of from 5c to 1f 65c the hectolitre, and only four a fall of from 7c to 66c.

COTTON.—The sales at *Havre*, in the week ending Friday, were 8,018 bales, and the arrivals 14,271. The closing quotations of low New Orleans were 99f the 50 kilogs, and very ordinary ditto 106f, the same as in the preceding week. This week business has been animated, and yesterday low New Orleans was 99f and 99f 50c.

SUGAR.—At *Havre*, in the week ending Friday, 1,320 hogsheads French West India went at 62f to 62f 50c the 50 kilogs duty paid; 100 ditto "usine," 63f; 230 casks Havana, 38f in bond. The arrivals were 576 hogsheads Martinique, 1,279 casks Havana. This week the sales have been tolerably numerous: French West India at 62f 50c to 63f; and ditto "usine," 65f 50c; Havana, 37f 25c. At *Bordeaux*, last week, business, in anticipation of the approaching change in the duties, was not active. Some small lots French West India went at 61f 25c to 79f. Other sorts were nominal. Reunion, 62f 50c to 63f 50c; Havana, 68f to 69f: Mauritius, 71f to 73f. This week only a small lot of French West India has been sold, and the price is not stated. At *Nantes*, last week, sales were large: 16,851 sacks Reunion, "gros grain," 69f; 4,750 sacks Mauritius, damaged, 40f; 380 hogsheads French West India, 61f. The arrivals exceeded 30,000 sacks Mauritius and Reunion. This week about 2,000 sacks Reunion, "gros grain," have been sold at 67f 50c to 69f; and 800 sacks Mauritius, 71f. At *Marseilles*, last week, the sales were not very numerous, but prices were firm. The arrivals were considerable.

COFFEE.—The demand at *Havre*, in the week ending Friday, was regular. 5,000 sacks Hayti went at 79f the 50 kilogs in bond for Jeremie, 81f for Cape, and 82f for Gonaives; 2,013 Rio not washed, 75f to 76f 50c; 3,800 sacks Santos, 75f to 77f. In addition, upwards of 1,500 sacks Hayti damaged were sold by auction. The arrivals exceed 6,700 sacks. This week sales have been numerous: Rio, 74f 50c to 78f; Hayti, 80f to 81f; ditto Cape, 82f 50c; Gonaives, 82f 50c to 83f. At *Bordeaux*, last week, transactions were very limited, owing to the coming reduction of import duties: only a small lot of French West India was sold at 3f 5c to 3f 20c the kilog duty paid: There have been no sales this week. At *Nantes*, last week, no sales are recorded; nor have any taken place this week. At *Marseilles*, this week, 960 sacks Rio were sold at 71f the 50 kilogs, and 40 sacks St Domingo at 79f 25c; also, 2,193 sacks Maracaibo damaged, and some lots of other sorts also damaged.

HIDES.—At *Havre*, in the week ending Friday, business, as usual at this epoch, was not active. 240 Buenos Ayres dry ox went at 161f 25c the 50 kilogs duty paid; 170 ditto bull, 150f; 500 ditto light, of animals dead of disease, 142f 50c; 574 Rio Grande, dry, 150f; 2,337 horse salted of La Plata, 13f each. The arrivals exceeded 23,000. The sole sale this week has been 100 La Plata, salted, at 85f duty paid.

WOOL.—At *Havre*, in the course of last week, there was a public sale of about 950 bales: Buenos Ayres, unwashed, at 62f 50c to 340f the 100 kilogs; 21 bales Monte Video, unwashed, 110f to 307f 50c; 5 ditto, washed, 550f; Bombay black, 40f to 47f; Cape, unwashed, 260f also of 263 sheepskins Buenos Ayres, unwashed, at 60f to 247f 50c. The arrivals were about 700 bales. This week, 35 bales Buenos Ayres, unwashed, have been sold at 2f 40c to 3f 22½c the kilog.

TALLOW.—At *Havre*, in the week ending Friday, 59 casks Monte Video were sold at 67f 50c the 50 kilogs duty paid. There were no arrivals. This week there have been no sales. At *Paris*, yesterday, the 100 kilogs were 134f 75c,—a fall on last week's quotations. At *Marseilles*, last week, nothing was done, owing to the want of supplies: quotations were, nominally, Italy and Russia, 125f the 100 kilogs; Rome, 127f; Algeria, 130f.

INDIGO.—About 50 cases Bengal and 50 Java were sold at *Havre* last week, but the prices are not stated. There were no arrivals. This week, 5 cases Bengal have been sold at 10f 65c the half-kilog duty paid. At *Bordeaux*, last week, 41 cases of different sorts were sold, and prices were firm. This week, 20 cases Bengal have been disposed of.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg. was 105f; Montpellier of 86 deg., 135f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f; ditto beetroot, 107f.

BRUSSELS, April 25.

An official return shows that the indirect taxes for the present year were 26,963,853f and were 331,287f more than in the corresponding quarter of last year. The increase was chiefly in the Government railways and in the post office; also in a smaller degree in the Customs and in the registration duties.

Correspondence.

SUPPLY OF COTTON.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Now that the American cotton crop has assumed a position of certainty as to its extent, may I take the liberty of placing before your readers a few facts and figures in relation thereto, which may assist those interested in arriving at an approximation of the future supply and consumption of cotton throughout the world for the present year.

The following table shows the comparative receipts at the American ports to this date the last eight years, the quantity subsequently received to 31st August, and the total crop of each year; that of the incoming crop being *estimated* at 4,500,000 bales:—

	Receipts to April 11. bales.	Receipts after April 11. bales.	Total Crop. bales.
1859-60	4,071,000	429,000	4,500,000
1858-59	3,320,000	531,400	3,851,400
1857-58	2,518,000	595,900	3,113,900
1856-57	2,679,000	260,500	2,939,500
1855-56	2,998,000	529,800	3,527,800
1854-55	1,998,000	846,500	2,847,300
1853-54	2,220,000	711,000	2,933,000
1852-53	2,821,000	441,000	3,262,800

The following table shows the comparative exports to Great Britain, France, other foreign ports, and the quantity taken by the American spinners so far in the season, and the total amount for each year:—

Years.	Exports to Great Britain. To April 11.	Great Britain. Total for Year.	France. To April 11.	France. Total for Year.	Total to Foreign Ports. To April 11.	Total to Foreign Ports. Total for Year.	Consumption of the United States. To April 11.	Consumption of the United States. Total for Year.
1860	1,981,000	2,450,000	497,000	600,000	2,838,000	3,557,000	438,000	800,000
1859	1,274,000	2,019,000	346,000	450,000	2,049 000	3,021,000	556,000	760,000
1858	1,087,000	1,810,000	238,000	384,000	1,590,000	2,590,000	191,000	452,185
1857	1,062,000	1,429,000	330,000	413,000	1,702,000	2,252,000	506,000	665,718
1856	1,279,000	1,921,000	376,000	480,000	2,031,000	2,954,000	422,000	633,000
1855	1,019,000	1,549,000	272,000	410,000	1,471,600	2,244,000	264,000	571,700
1854	047,000	1,604,000	234,000	374,000	1,373,000	2,319,000	248,000	592,800

The above figures would then point to the disposal of a crop of 4,500,000 bales as follows:—To Great Britain, 2,450,000 bales; France and the Continent, 1,100,000 bales; and American spinners, 800,000 bales; leaving 150,000 bales more in stock in the American ports at the close of the season than at the same time last year, owing to the great quantity of trashy cotton marketed this year.

Taking the above as data for further calculations, the question arises,—How will a supply of 2,450,000 bales meet the weekly increasing consumption now going on in this country? On this subject the following computations may not prove uninteresting:—

		bales.
Crop		4,500,000
Received to April 11th		4,071,000
Yet to receive		429,000
Add stocks at port		900,000
American supply to 31st August		1,329,000
Deduct—American consumption (estimated at 800,000 bales, 438,000 bales taken thus far)	360,000	
Further exports to France and the Continent	250,000	
Stock in the American ports on the 31st August, 100,000 bales in excess of last year	250,000	
		861,000
Supply available for shipment to Great Britain before August 31st, 1860		468,000

		bales.
Supply available for shipment to Great Britain—brought forward		468,000
Stock on hand in Liverpool, 21st April	825,000	
American at sea, 23rd April	330,000	
Cotton shipped after 31st August, to arrive before 31st Dec., 1860	350,000	
		1,505,000
Supply available for Great Britain from now to 31st December, 1860		1,973,000
Consumption of Great Britain:—36 weeks at the average of last year, viz., 36,670 bales	1,320,000	
Add 4,000 bales per week for increase of new mills and machinery, 36 weeks	150,000	
Export of American cotton to the Continent (60,000 bales over last year, to make up for the short supply direct from America)	200,000	
	1,670,000	
Deduct increase in stocks now held by spinners over the same period last year	50,000	
		1,620,000
Probable stock of American, 31st December, 1860		353,000
Against in 1859		306,000
— 1858		269,000

From this it will appear that great as the crop has proved, it will, considering the *great quantity* of *trashy* cotton it contains, only suffice to meet the increasing consumption of the world, whilst the uncertainty as regards the next crop being as large as the incoming one may shortly exercise considerable influence. The present season will undoubtedly prove a critical one. During the last thirty years there has never been three successive large crops of cotton produced in America. Two successive large crops have now been received, and the weather and its effects upon the next crop will be watched with considerable interest the next few weeks. So far the weather for planting has been highly favourable, and should there be no drawback in the shape of "killing frost" in April, which has always caused considerable injury to the young plant, a good crop may again be realised, and thus secure to our manufacturing interests one great element of continued prosperity,—a good supply of the raw material. The present cold and inclement weather here, however, causes some anxiety lest there should be experienced in America the same result as in 1849, when a frost occurred in the cotton regions on the nights of the 16th, 17th, 18th, and 19th April, and caused a deficiency in the yield the following year of 700,000 bales—the crop of 1849-50 proving only 2,096,000 bales against 2,728,590 bales. The following extract from a New York circular of the 2d May, 1849, which relates the occurrence of a frost which ultimately proved so disastrous, will no doubt prove interesting:—

"No small solicitude is felt about the growing crop of cotton, which it is certain has been injured by frost. A late letter from Montgomery, Alabama, lying before us, and from a party well informed, and anxious to avoid exaggeration, runs thus:—

"In all the most fertile and important cotton country of Georgia, Alabama, Mississippi, and Florida, the usual time of planting is from the 1st to the 20th of March, averaging about the 10th. As near as I can learn, the cotton fields of that extensive region were swept by frost on the 16th, 17th, 18th, and 19th April, and must mostly have been replanted. The ground was then, and has continued, I believe, to be too dry for the prompt germination of the new seed, which, moreover, owing to the scarcity of seed, was more sparingly planted, and therefore a good stand may be missed. If rain has not fallen, the time thus lost may be estimated as equivalent to five or six weeks.

"A late fall and a very propitious season may reduce the loss in cotton, but there must be less considerably than would have been raised if the frost had not occurred. It is quite impossible to estimate the extent of this loss, and a very large crop may yet be made, if all things concur of a long and favourable season.

"In the higher latitudes of Georgia, South Carolina, Alabama, Mississippi, Tennessee, and Arkansas,—where the planting is later,—the injury is not so severe; and in many of these parts the planters will get a good stand from the seed first put in, and which had not germinated.

"Upon the whole, the coming crop may be said to be in a precarious state, yet with early showers, continued good seasons, and the absence of the boll-worm, the caterpillar, and an early autumnal frost, a large crop may yet be made."—I remain, Sir, your most obedient servant,

Liverpool, April 25, 1860. MAURICE WILLIAMS.

COMMERCIAL AND MISCELLANEOUS NEWS.

The annexed report is dated Calcutta, March 22:—Produce Market.—We are again unable to report any change for the better in our export market. The scarcity of tonnage and the high rates ruling, coupled with the firmness of holders of produce, who hold out still for extreme rates, have had a most depressing effect. Our exports of almost all bulky articles show a considerable falling off; the indigo season may be said to be over. Raw silk is in good demand, though our prices are far above London rates. Sugar in moderate demand. Jute in neglect. Saltpetre in small demand. Other articles in much about the same state as before. Import Market.—Piece Goods.—The demand and the prices generally speaking remained much in the same position during the past fortnight. The consumption in our and in the principal up-country markets continues on a rather limited scale, and in consequence neither the total absence of arrivals, nor the limited quantity of goods now on the way, have any beneficial effect on our markets. Even the easiness of money did not encourage buyers to enter freely into transactions. Generally speaking things look as if likely to remain in this state for a time. Yarns are also quiet, with little alteration in prices. Metals are firm, and we quote copper sheathing at 46.

Advices from New York to the 14th instant state that loans were offered very freely at 5 per cent. on call, and 5 to 6 per cent. for first-class double name paper. The banks were not, so far as could be ascertained, increasing their line of discounts, though they were not reducing them. The Sub-Treasury balance continues to run down; the receipts on the 13th were 185,817 dols; the payments, 68,049 dols; balance, 7,270,343 dols. Foreign exchange was inactive. The leading bankers asked 108⅞ to 109 for 60 day sterling bills, and 109⅝ to ¾ for short sight.

During the month of March, the total quantity of coal and coke exported from the various coal ports of Great Britain was—of coal 619,720 tons, and of coke 14,927 tons. Of this quantity, Newcastle exported 164,253 tons of coal and 9,651 tons of coke; Sunderland, 84,509 tons of coal and 1,885 tons of coke; Hartlepool and West Hartlepool, 34,007 tons of coal and 2,260 tons of coke; Blyth, 12,205 tons of coal; Hull, 6,653 tons of coal; Liverpool, 48,139 tons of coal and 180 tons of coke; Cardiff, 83,937 tons of coal and 183 tons of coke; Swansea, 18,700 tons of coal; Newport, 13,827 tons of coal. In Scotland, Glasgow exported 2,318 tons of coal and 63 tons of coke; Grangemouth, 3,607 tons of coal and 20 tons of coke; Alloa, 3,857 tons of coal; and Troon, 6,081 tons. The total quantity of coal and coke shipped during the month to London and other ports in the United Kingdom was 840,263 tons of coal and 9,076 tons of coke. As usual Newcastle contributed most largely to this quantity, it alone shipping 195,104 tons of coal and 2,909 tons of coke; Sunderland shipped 167,012 tons of coal; Seaham harbour, 61,532 tons of coal; Hartlepool and West Hartlepool, 118,300 tons of coal and 168 tons of coke; Middlesborough, 17,207 tons of coal and 128 tons of coke; Goole, 10,251 tons of coal; Swansea, 17,728 tons of coal and 3,870 tons of coke; Cardiff, 65,872 tons of coal and 1,351 tons of coke; Newport, 50,003 tons of coal and 244 tons of coke; Troon, 26,315 tons of coal; Maryport, 31,926 tons of coal and 66 tons of coke; and Whitehaven, 17,838 tons of coal and 115 tons of coke. During the month 1,862 vessels were engaged in the oversea coal trade, of which number 1,068 were English, 257 French, 85 Danish, 84 Norwegian, and 58 American vessels.

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending March 10, 1860, when compared with the previous month:—

	Feb. 11, 1860.	March 10, 1860.	Increase.	Decrease.
	£	£	£	£
Bank of England	21735265	20717800	...	1017465
Private Banks	3504381	3376819	...	127562
Joint Stock Banks	2977034	2948330	...	30704
Total in England	28216680	27040949	...	1175731
Scotland	4124606	4001977	...	122629
Ireland	7353744	7204462	...	149282
United Kingdom	39695030	38247388	...	1447642

And, as compared with the month ending the 12th of March, 1859, the above return shows an increase of 300,406*l* in the circulation of notes in England, and an increase of 791,426*l* in the circulation of the United Kingdom. On comparing the above with the fixed issues of the several banks, the following is the state of the circulation:—The English private banks are below their fixed issue 1,028,116*l*, the English joint stock banks are below their fixed issue 356,027*l*,—total below fixed issue in England 1,384,143*l*; the Scotch banks are above their fixed issue 1,252,706*l*, the Irish banks are above their fixed issue 849,968*l*. The average stock of bullion held by the Bank of England in both departments during the month ending the 7th of March was 15,162,331*l*, being a decrease of 178,522*l* as compared with the previous month, and a decrease of 4,721,508*l* when compared with the same period last year. The following are the amounts of specie held by the Scotch and Irish banks during the month ending the 10th of March:—Gold and silver held by the Scotch banks, 2,624,584*l*; gold and silver held by the Irish banks, 2,746,601*l*; total, 5,371,185*l*; being a decrease of 70,418*l* as compared with the previous return, and an increase of 398,544*l* when compared with the corresponding period last year.

An account, pursuant to the Act 8 and 9 Vict., cap. 38, of the amount of bank notes authorised by law to be issued by the several banks of issue in Scotland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 7th day of April, 1860:—

Name and Title.	Authorised Circulation	Average Circulation.	Average Amount of Coin held.
	£	£	£
Bank of Scotland	300455	424837	231762
Royal Bank of Scotland	183000	427254	422875
British Linen Company	438024	463464	361922
Commercial Bank of Scotland	374880	492236	291343
National Bank of Scotland	297024	408457	272284
Union Bank of Scotland	454346	603643	308263
Aberdeen Town & County Banking Company	70133	122628	89425
North of Scotland Banking Company	154319	192619	104501

National Bank	852,269	1,252,244	675,272

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 25th day of April, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,448,710	Government Debt	11,015 100
		Other Securities	3 459,800
		Gold Coin and Bullion	13,973,710
		Silver Bullion	...
	28 448,710		28,448,710

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (Including Dead Weight Annuity)	9,728,943
Rest	3,218,346	Other Securities	22,070,236
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	6,251.582	Notes	6,813,465
		Gold and Silver Coin	713,410
Other Deposits	14,602,278		
Seven Day and other Bills	700,848		
	39,326,054		39,326,054

Dated the 26th April, 1860. W. MILLER, Deputy Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,336,093	Securities	31,721,197
Public Deposits	6,251,582	Coin and Bullion	14,687,120
Private Deposits	14,602,278		
	43,189,953		46,408,317

The balance of Assets above Liabilities being 3,218,346*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£167,109
An INCREASE of Public Deposits of	413,001
A DECREASE of Other Deposits of	910,147
No change in the amount of Government Securities.	
A DECREASE of Other Securities of	720,102
An INCREASE of Bullion of	62,434
An INCREASE of Rest of	6,587
An INCREASE of Reserve of	243,854

The effect of the large decrease in the private securities is fully counteracted by the decrease in the private deposits; but as the Government deposits have at the same time increased, there is an increase of nearly a quarter of a million in the reserve.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,484,248	£ 20,513 710	£ 21,277,952	£ 22,705,780	£ 22,336,093
Public deposits	4,693,443	5,311,645	3,830,150	5,249,296	6,251,582
Other deposits	10,907,429	9,450,494	15,657,648	15,334,625	14 602,278
Government securities	14,292,170	11,333,126	9,885,481	11,371,118	9,728,943
Other securities	9,781 347	17,729,004	15,455,430	17,505,501	22,070,236
Reserve of notes & coin	10,350,560	4,241,580	12,736,145	10,176,717	7,526,875
Coin and bullion	16,646,835	9 555,235	18,674,750	17,640,342	14,687,120
Bank rate of discount	2½ p. c.	6½ p. c.	3 p. c.	3½ p. c.	5 p. c.
Price of Consols	96	92⅞	97⅛	89¼	95
Average price of wheat	37s 1d	53s 2d	44s 9d	41s 4d	49s 6d
Exchange on Paris (sbrt)	25 55 60	25 25 30	25 2½ 10	25 2½ 10	25 10 17½
— Amsterdam ditto	13 3½	11 16½	11 15	11 14	11 14½ 15
— Hamburg (3 months)	13 13	13 8½	13 6½	13 4½ 5	13 5½ 5½

At the corresponding period of the year 1850, the money market was glutted. In the Stock Exchange 1 per cent. could not be obtained for loans on Government securities. The Australian Colonies Constitution Bill was passing through the House of Lords. In Paris, arbitrary police measures were exciting irritation. The papers in the interest of Louis Napoleon had declared themselves in favour of the maintenance of the Republican form of Government, suggesting, however, that His Highness should receive from the Assembly a prolongation for ten years of his powers as President of the Republic.

In 1857, great stringency prevailed in the money market, owing partly to the active demand for silver for the East. The Bank rate of discount was 6½ per cent. Loans on Consols were not obtainable below 7 per cent.; and the Bank had just intimated their intention of restricting their advances on Government securities to a period of seven days.

In 1858, the position of Lord Derby's Government was imperilled through the course taken by the Parliamentary debates on the India Bill. The funds, however, were supported by the plethora of money, as well as by the reinvestments by holders of 2,000,000*l* of Exchequer bonds about to be paid off.

In 1859, the expectation of an immediate outbreak of war between France and Austria, combined with the positive statement that France and Russia had concluded an offensive and defensive alliance, directed against England, had caused a wild panic in the Stock Exchange. Within a single week Consols fell from 94½ to 88½. The fall amounted to 20 to 22 per cent. in Turkish Bonds, 9 to 10 per cent. in Russian and Sardinian, 9 per cent. in East Indian railway stock, 5 to 9 per cent. in British railway stocks, and 3*l* to 4*l* per share in French and Lombardo-Venetian railway shares. The last Indian Debenture Loan had fallen to 5 per cent. discount, and the French 3 per Cents. from 66½ to 63. The Bank of England rate of discount had been raised promptly from 2½ to 3½ per cent., preparatory to a further advance.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 1,126,082*l*; in 1857, a deficiency of 8.278,510*l*; in 1858, an excess of 202,218*l*; and in 1859, a deficiency of 2,170,876*l*. In 1860, the deficiency is 7,467,958*l*.

The money market this week has been quiet. The supply of money has been fully equal to all requirements. The best short bills have consequently been discounted in the open market at 4¾ and even 4½ per cent.; and at the Bank of England the applications have experienced a marked falling off. For four months' bills, however, the rates have been maintained in Lombard street at 5¼ to 5½ per cent., and for six months' at 5¾ to 6 per cent.

To-day, owing partly to the preparations for the payment of the large sum of 2,650,000*l* due on Monday next on the Victoria Government Loan, the demand for money was brisker. 4¾ per cent. may be quoted as the nearest rate for the best paper having a month or six weeks to run. Long engagements are avoided as much as possible, hesitation being still felt with regard to the future course of the market. A good amount of business was done to-day at the Bank of England.

Nearly the whole of any gold that may come forward is expected to be retained here; for, although the foreign exchanges are not fully supported at the advance to which they were lately carried by the rise in the value of money, the demand for gold for exportation has not yet revived.

There have been no transactions in bullion at the Bank since the date of the returns given above.

The arrivals of specie and bullion continue limited. The principal sums this week have consisted of 157,000*l* from Melbourne, and 30,000*l* from the United States. The amount of specie shipped for Bombay by the Delta, which left this day, was 129,465*l*, viz., 8,845*l* gold, and 120,620*l* silver.

The amount of Australian gold for England known to be still at sea is 482,000*l*. The Greyhound, with 20,000*l*, has been out 101 days; the Monarch, Norwood, and Ocean Chief, with an aggregate of 285,000*l*, 94 days; the Montmorency, with 36,000*l*, 90 days; the Lightning, with 54,000*l*, 79 days; and the Lincolnshire, with 87,000*l*, 78 days.

The foreign exchanges show a drooping tendency, but the actual reduction in the rates is not of much importance.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley:—

Gold.—The Copenhagen, from Melbourne, has arrived since the date of our last circular (19th April), with 157,000*l*; the gold is expected to be delivered in the course of a day or two, and the greater part will doubtless be sent to the Bank, the demand for export having in a great degree ceased. The Illinois brought 20,000*l* from New York, and the Armenian has taken 15,265*l* to the West Coast of Africa; the Delta has also taken 8,845*l* in gold to Bombay.

Silver.—The Delta has taken only 120,620*l* in bar silver to Bombay. The market is very quiet just now, and we quote the price as 5s 1⅝d to 5s 1¾d per oz standard.

Mexican dollars have been sold in small quantities at 5s 2⅛d per oz; there are not now many held here, and a rise in price is not unlikely, if orders arrive to-morrow from China. The Arabia brought 10,000*l* in dollars from New York, but the amount was sent to Havre direct from Liverpool.

Exchange on India remains without change. For Bank drafts on Bombay and Calcutta, at 60 days' sight, the rate is 2s to 2s 0¼d; Madras, 2s; bills with documents, 1s 11½d to 1s 11⅝d.

India Government Loan Notes have not been in much demand of late, but prices remain without change at 103¾ to 104 for 5½ per Cents., and 98½ for 5 per Cents. Telegrams from Calcutta announce a rise from 100¼ to 102¾, and this information may cause some improvement.

A great sensation has been produced in all commercial circles this week by the disclosure of the extraordinary frauds perpetrated upon the Union Bank of London. The apprehension of the chief cashier, William George Pullinger, was briefly mentioned in the last number of the ECONOMIST. Many disquieting rumours obtained circulation, but the extent of the loss—no less than 263,000*l*—did not transpire until Tuesday, when the directors issued the following special report to their proprietors:—

TO THE PROPRIETORS OF THE UNION BANK OF LONDON.

It is with deep regret that the directors have to communicate to the proprietors that they have discovered very large frauds committed by their late chief cashier, William George Pullinger, and with as little delay as possible they lay before the proprietors a statement of the facts, and submit the course which, upon a careful consideration of the circumstances, they recommend for meeting the loss which has been sustained.

William George Pullinger was appointed a cashier of this bank in April, 1839, having previously held a similar situation in the banking-house of Sir Claude Scott and Co, and after sixteen years of most efficient, zealous, and, it is still believed, faithful service in subordinate capacities, was, about five years ago, raised to the situation of chief cashier, and such was the confidence reposed in him by the directors and managers, and their satisfaction with the manner in which he discharged his duties, that about three months since they voluntarily raised his salary to 600*l* per annum.

His duties as chief cashier were to superintend the other cashiers, to procure cheques for money, to keep their tills supplied; and it devolved upon him to pay all cheques, gold and silver coin, bank notes, &c., which were not required for the purposes of this bank to the Bank of England, accompanied by a docket specifying the particulars of each payment, and by the "pass-book" of the Bank of England, which was necessarily in his official charge; and an account of these payments was also furnished by Pullinger to the principal ledger-keeper. In the ordinary course of business Pullinger daily sent a junior clerk for the pass-book, which contained the acknowledgment by the Bank of England of the cash paid in, and it was the duty of Pullinger to deliver the pass-book to the ledger-keeper, whose duty it would then become to check the entries in it against the Bank of England by the items in his ledger. The ledger-keeper, on finding his account tally with the pass-book, would report the Bank of England balance to the accountant, to be posted in the general ledger, when any error in the Bank of England balance would disturb the general balance of the day, and become the subject of investigation.

On Thursday last, the 19th inst., in consequence of some information, application was made at the Bank of England for their statement of the balance of this bank, when a deficit of no less than 263,070*l* 8s 10d was discovered. Pullinger, who was absent at the time attending a funeral of a relative, was immediately followed by a director and the manager and brought back, when he at once confessed that from losses on the Stock Exchange he had from time to time since his appointment as chief cashier abstracted large sums from the charges taken over to the Bank of England, which he had concealed from the ledger-keeper by exhibiting to him a fabricated pass-book, in which the balance agreed with what it appeared in the accountant's general ledger. He was then given into custody.

It may be proper here to state that the supposed balance at the Bank of England was 569,706*l* 16s 2d, while the certified balance was 306,636*l* 7s 4d, exhibiting the deficit of 263,070*l* 8s 10d.

The directors now proceed to state the course they recommend for meeting this loss, and they feel assured that the proprietors will concur with them in opinion that it should be done promptly and effectually.

In July last, the sum of 120,000*l* was transferred from the reserved fund to the capital account; it is now proposed to retransfer this sum from that account, and to appropriate the further sum of 100,000*l*, the amount of the existing reserved fund, towards meeting the present defalcations, an application of this fund specially contemplated in the deed of settlement "for meeting unforeseen losses;" the balance of the deficiency, about 40,000*l*, will be paid out of the accrued and accruing profits of the present year, which the directors confidently anticipate will further enable them to declare a dividend of 5 per cent. for the six months ending 30th June next, which, with the dividend and bonus paid in January last, will be a total payment of 12½ per cent. for the year.

The directors hope that some of this large amount may be recovered, although it would be inexpedient to enter into details on this subject at present, but they will not take those matters into calculation now; they prefer taking the maximum loss which can be sustained, and they feel that the honour and credit of the Union Bank of London, and the true interests of their co-partners are best consulted by at once liquidating that amount, confidently believing, as they do, that, with the original paid-up capital intact, a few years' profits of their business will enable them to replace all that has now been lost, without interfering with the usual dividends paid to the proprietors.

While it is certainly satisfactory to be able to meet so large a loss out of the reserved profits of the bank without trenching on the original paid-up capital, the directors find it impossible adequately to express their regret and mortification that such a crime could have been successfully perpetrated under the system of cheques which has been in operation since the establishment of the bank. No extensive business can be carried on without reposing confidence in those employed in it, and in the present case the directors felt justified in reposing in Pullinger the confidence necessary for the discharge of his duties; he had been in the employment of the bank since its commencement, his attendance was unremitting, his industry and talent conspicuous, his expenditure appeared consistent with his position and salary, and his domestic habits were believed to be correct and creditable; it now appears that for a long time he had been engaged in an extensive system of time bargains on the Stock Exchange.

The system of checks in operation in the bank was framed mainly on that existing in the Bank of England, and the directors have, with this exception, found it effectual.

For the first time during twenty-one years the directors are unable to address their copartners in those terms of congratulation which they have used since the establishment of the bank, and for the first time during that long period has the steady and remarkable success of the bank been interrupted. They believed they had taken every necessary precaution which experience dictated, and which, so long as those precautions were strictly observed by all those through whose hands Pullinger's accounts passed, had proved, and would have continued to prove, effectual; nor can the directors claim for themselves, or from those in their employment, exemption from those feelings of confidence which long association and services (for many years efficiently and honestly performed) are calculated to engender.

The confidence of their devoted manager, Mr Scrimgeour, no less than their own, has been grievously abused, and the directors would do violence to their own feelings and sense of justice were they not to express their sympathy with their friend and officer under these unfortunate and mortifying circumstances.

The enormous amount of Pullinger's defalcations, and the fact that they have been going on for a period of five years, have naturally excited a wide-spread distrust. This sentiment, however, may be carried too far. The bank's losses are clearly traceable to their loose practice of confiding to one and the same man, for years together, not merely the payment of heavy sums into the Bank of England, but also the custody of the pass-book. This book formed, in fact, the sole voucher of the Union Bank that they possessed a balance at the Bank of England. Had the *true* pass-book been at any time obtained from the Bank of England, and scrutinised by any other officer than Pullinger, or, on the other hand, had the *false* pass-book which Pullinger palmed off upon his fellow *employés* been sent into the Bank of England, the fraud would have been instantly detected. But no! the whole management of this department centred in the hands of one man, and the Union Bank's balance at the Bank of England was never attested by any other intercommunication. It is not believed that any similar establishment in London transacts its business upon this loose plan. It is, of course, possible that a clerk who is sent to pay money into the Bank of England, or into any other bank, may appropriate it to his own use, and even make a fictitious entry in the pass-book, implying that the bank has received the money, but the fraud must be detected the following day, when the bank clerk, upon examining the pass-book, will report that the accounts will not agree. Most people are sufficiently familiar with the appearance of their banker's book to be able to identify it a glance. The device of a fictitious pass-book is not likely to be ever again resorted to with success, after the present exposure, so that this particular form of fraud can scarcely recur. It is suggested, however, as highly desirable that, in the instance of banking and other great establishments, where very large sums are involved, the verification, at frequent intervals, of the balance at the Bank, through personal inquiry by a director, would form an additional safeguard. The handling and custody of the banker's pass-book should fall within the province of a partner, director, or general manager.

In addition to Pullinger, another clerk of the Union Bank has been arrested. His complicity with the chief offender is suspected; but the primary charge against him is the abstraction of a sum of 1,240*l* of the bank's money, which he is alleged to have handed over to Pullinger, at the same time attempting to conceal the transaction by means of false entries. This sum, however, is comprised in the total amount of the defalcations mentioned in the directors' report. The directors are still engaged in their investigation, with a

view to discover if the plot has any ramifications, and also the channels through which the enormous sum of 263,070*l* has been dissipated. The Committee of the Stock Exchange are likewise ready to institute an investigation into the transactions carried on by members of that establishment for account of Pullinger. A merely formal examination of this man took place to-day at the Mansion House. He was then remanded again.

The shares of the Union Bank of London, which prior to the discovery of these frauds commanded 30, had fallen yesterday afternoon to 23. The closing quotation this afternoon was 24⅜ to 25¼. The fall since last week is, therefore, about 5*l* per share, and this, on 60,000 shares, represents a total of 300,000*l*.

The Bank of England having signified their acquiescence, banking business throughout London will terminate on Saturdays at three o'clock, commencing with Saturday, the 19th of May.

The Stock Exchange is expected to be closed on Tuesday next, the 1st of May, according to custom, that being one of the days fixed for striking the half-yearly balance at the Bank of England.

The new Victoria Government Bonds have been in active demand during the last two or three days, and rose this afternoon to 106⅜ to ⅝, or, say, 1½ premium on the Committee's reserved price. They will probably continue to attract numerous investments.

The movement of the Paris Bourse is rather reassuring A rise of about ⅜ per cent. has taken place in the 3 per Cent. Rentes, which closed this (Friday) afternoon at 70.40 for money, and 70.35 for the account.

The English funds have shown a tendency to improvement, the political intelligence from the Continent being less suggestive of immediate anxiety, and the money market having become more settled. Consols have risen about ¼ per cent., being last quoted 94⅞ to 95 for money, and 95, "buyers," for the 9th of May. Little business is going forward at present. The Reduced and New 3 per Cents. are still relatively about ⅛ per cent. cheaper than Consols, after making allowance for the difference in the incidence of the dividend. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The market for British railway stocks has subsided into a very quiet state. The alteration in prices is not of much importance, but in a few instances the absence of active inquiry has led to a slight reduction. South-Eastern stock has declined ⅜ per cent.; and Caledonian, Eastern Counties, Great Northern, Lancashire and Yorkshire, and Midland, ½ per cent. On the other hand, London and North-Western stock has risen ½ per cent. The supply of stock in the market has somewhat increased, yet the highly encouraging traffic returns contribute to render *bonâ fide* holders very reluctant to sell. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

RAILWAYS.	Closing prices last Friday.	Closing prices this day.
Bristol and Exeter	101 3	102 3
Caledonian	91 ⅛	90⅛ 1

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.17½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is at about the same price in London and Paris.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is about 108¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

The Commercial Times.

CONVEYANCE OF LETTERS IN INDIA BY EXPRESS.—Information has been received from the Director General of the Post Office in India that an express is despatched from Bombay to Calcutta and Madras, as well as to Lahore, via Agra, on the arrival at Bombay of each mail from England, and that, subject to the following conditions, letters and newspapers for any station in India may be forwarded by such express to the post office on the above-mentioned lines of route which is nearest to their destination, from which post office they will be sent on by the first ordinary mail. 1. Letters and newspapers intended to be forwarded by this express must be legibly marked, "By express," and must be registered. 2. In addition to the registration fee and the ordinary postage, there must be paid, in advance, upon each letter an express postage at the rate of 2s for every quarter of an ounce or fraction of a quarter of an ounce, and upon each newspaper an express postage of 2s for every four ounces or fraction of four ounces.

MAILS TO BE DESPATCHED

This evening, to America (New York line), by British packet, via Cork.
On Wednesday morning, to West Indies and Pacific; to America (New York), by United States packet.
On Wednesday evening, to Canada and United States, by Canadian packet, via Cork.
On Thursday evening, to India (Bombay line), via Marseilles; Constantinople, by French packet.
On Friday morning, to India (Calcutta line), China, &c, via Southampton.
On Friday evening, to Constantinople, by French packet.
On Saturday evening next, to Cape of Good Hope, to America (Boston line) and Newfoundland, by British packet, via Cork.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The show of English wheat at Mark lane, this morning, was again limited. The demand, however, for all kinds ruled somewhat heavy, at about Monday's currency. In foreign wheat, next to nothing was doing; but there was a good consumptive inquiry for spring corn, especially fine barley and oats, at extreme rates. Flour met a dull sale, at the late improvement in value. The imports from abroad, this week, are 3,650 quarters of wheat, 7,080 barley, 3,520 oats, and 730 sacks of flour.

At Liverpool, to-day, wheat and most other articles have commanded full quotations. The United States markets have shown more firmness, both for wheat and flour; but the transactions have been chiefly confined to parcels for home consumption. We have advices from Alexandria to the 10th inst., forwarded by Messrs Briggs and Co. Annexed are the current rates of produce at that date:—Wheat—Saide, 39s 6d to 43s. Beans—Saide, 29s to 30s; Behera, 26s 6d to 27s 6d. Indian corn, 26s to 26s 6d; barley, 20s to 21s per quarter.

The sales during the week, in the Liverpool cotton market have been very large, amounting to no less than 91,500 bales, of which spinners have taken 63,500, speculators 12,000, and exporters 16,000 bales. This inquiry has made holders less eager to force sales; they have, nevertheless, met the demand very freely; but an advance in some low descriptions, wherein the decline has been so remarkable of late, has been obtained to the extent of ⅛d to ¼d per lb, but in the better descriptions there is no

quotable change. Why this sudden start in the market should have taken place is not apparent; the Liverpool stock continues to increase, and the weekly receipts in America indicate that the crop may be expected to reach the fullest estimates. We may, therefore, expect this lively movement to be only temporary. To-day, 12,000 bales are sold without change.

Large purchases of cotton have lately been made at Bombay, on higher terms, and chiefly for shipment to England.

The latest prices paid for cotton at Antwerp are the following:—

	Louisiana, Texas, and Mobile.	Georgia and Florida.

Letters from China, by the present mail, state that the total exports of tea to Great Britain were 69,085,200 lbs, against 47,837,500 lbs, to the corresponding period in 1859. The shipments to the United States amounted to 28,106,400 lbs, against 24,205,000 lbs, in the previous season. The total increase to both countries, therefore, is 25,149,100 lbs. Our market continues steady, and prices, generally, are well supported.

The annexed commercial report is dated Hong Kong, March 15:—

Business at Canton is in anything but a satisfactory state. In tea, transactions are much curtailed, in consequence of the entire absence of fresh supplies. Scented teas are rather higher, as also are Canton greens. Silk is quite out of stock for European use. Fuhchau dates are to 6th instant. There had been considerable activity in tea immediately subsequent to the arrival of the 10th January mail from England, causing an advance of about one tael per picul on common and good common descriptions. Previous to dates under notice the demand had subsided, and prices had gone back to rates current at departure of last mail. The stock was considerably reduced, not more than 15,000 chests congou being available for the wants of the market. About 19,000 chests congou had changed hands, 2,000 half-chests oolong, and 400 packages of fancy teas. The arrivals continue to fall off in quantity, and shew evident signs of approaching an end. Our accounts from Shanghai are not of a favourable nature. The rebels commonly so called are again mustering in force in the silk district near Soochow, and again in the country between the tea producing countries, and the ports of shipment. Tea—The upward tendency in the tea market had been established. Current rates exhibited a rise of fully 2 tls on prices current a fortnight previously, as far as black teas were concerned. Greens displayed a decided tendency to advance. Stocks were becoming very low, 14,000 chests of black tea being all available for the wants of the market, of which the bulk is common congou. Silk—The "falling off" now exhibits a total of 10,000 bales, as compared with last year. The stock consisted of 3,500 bales only. No. 3 Tsatlees were quoted 420 to 425 taels; 4 to 5 ditto, 375 to 400 taels; 1 and 2 Taysaams, 380 taels; 3 ditto, 345 to 350 taels.

There has been a steady, though not to say active, inquiry for most descriptions of sugar, at last week's currency.

The coffee trade has ruled somewhat flat; nevertheless, scarcely any change has taken place in the quotations. Cocoa has gone off rather easier in price.

The annexed comparative return shows the stock of coffee at Antwerp on the 20th inst.:—

	1860.	1859.	1858.
	bags.	bags.	bags.
Java, first and second hands	5,000	4,000	14,000
St Domingo	3,000	12,000	28,500
Rio and Bahia	5,500	16,000	83,000
Sundries	1,000	1,000	4,000
Total	14,500	33,000	129,000

We have received the following, in reference to the coffee trade at Ceylon, from Messrs A. W. Heale and Co. It is dated Colombo, March 29:—

Continued fine weather has enabled exporters to make good progress, and the shipments of coffee to date are as follows:—

PLANTATION COFFEE.

To Great Britain	cwts 204,681	against last year,	cwts	173,369
Foreign Ports	16,859	—	—	25,843
Australia and India	6,499	—	—	6,944
	228,039			206,156

NATIVE COFFEE.

To Great Britain	cwts 61,148	against last year,	cwts	32,987
Foreign Ports	47,033	—	—	93,433
Australia and India	2,035	—	—	10,887
	110,216			137,307

The transactions in native coffee since our last report have been on a very moderate scale, owing to scarcity; the value, however, remains the same. Some small parcels of good new Ouvah coffee are finding their way to market. We hear of but one purchase of plantation coffee in parchment during the last fortnight, and that at 11s 3d per bushel. The weather continuing favourable both for transport from the interior and shipment, our exports of plantation coffee continue in excess of last year. The weather for the ensuing crop is everything that could be desired. Plantation coffee, low grown, 67s 7d; mountain, 68s 10d; native coffee, well picked and dried, 53s 7d per cwt.

Most kinds of rice have commanded very full prices; but the demand has not increased to any extent.

The wool trade continues heavy, and the quotations were almost nominal. The public sales will commence on Thursday next.

Rum has moved off slowly, at about late rates, and there has been very little inquiry for brandy. Importers, however, have declined to press sales.

The silk market is heavy, and China qualities have, in some instances, fallen 1s per lb. The total exports of silk from China to the latest dates were 49,596 bales, against 56,121 bales in the previous year.

There is very little passing in saltpetre, and English refined has given way in price.

The iron market has been very dull, and Scotch pig has fallen to 53s 3d cash mixed numbers. Linseed oil has advanced to 28s 3d on the spot; but tallow has ruled at 56s for P. Y. C. on the spot. Other kinds of produce have undergone very little change in price.

"Under the combined influences of the unfavourable weather and a material falling off in the demand from the interior," observes the New York *Shipping List* of the 11th inst., "the market for domestic goods has assumed a dull and heavy aspect, and a feeling of depression is manifest in almost every department. Small sales are making quite fast, but large transactions are about finished up. The Western trade is still backward, but a general improvement is anticipated towards the latter part of this month or the beginning of the next, when canal navigation will be in operation. The shipments continue heavy, and the total exports since 1st January are large in advance of last year. The auction sales continue to divert attention from the regular market for foreign fabrics, which remain inactive, and transactions are at merely nominal prices."

Total		129	24	131

The improved demand noticed in our last continues, and with a limited supply of the better kinds of even grades, prices for these descriptions are very firm. The sales since Friday comprise about 4,600 bales, closing steady at the following rates. We quote:—

NEW YORK CLASSIFICATION.

	Upland.	Florida.	Mobile.	New Orleans and Texas.
	c	c	c	c
Ordinary	7¾	7¾	7¾	8
Good ordinary	9	9¼	9¼	9½
Middling	11¼	11¼	11¼	11½
Good middling	11¾	12	12¼	12½
Middling fair	12½	12½	12½	13½

The arrivals have been from Texas, 464 bales; New Orleans, 394; Mobile, 742; Florida, 704; Georgia, 996; South Carolina, 1,248; North Carolina, 114; Virginia, 295; Baltimore, 444—total, 5,401. Total import since 1st September, 329,219 bales. Export from 1st to 10th April 4,182 bales, against 10,549 in 1859.

NEW YORK, April 14.—The sales of cotton yesterday embraced about 1,000 bales, closing dull on the basis of 11¼c to 11½c for middling

Uplands; ordinary and poor grades were heavy, and more or less nominal, while the higher and finer qualities were comparatively scarce and firmly held.

There has been a large increase in the demand for cotton during the week, both from the trade and for export. Speculators have also made considerable purchases in East India and America, of low quality, which have recently been offered at very tempting prices. The increase in the demand for consumption has also occurred chiefly in the low middling and ordinary qualities. There has been again a free import. Prices of the better grades of American have advanced 1-16d to ⅛d per lb, whilst sales are making in the lower fully ¼d per lb above the level of the recent lowest business. Egyptians are rather more saleable. Brazil are without alteration. The lower qualities of East India command a decided advance. In some cases fully ⅜d per lb has been paid above the lowest business. The sales to-day may reach 10,000 bales. An active market, but well supplied. The reported export amounts to 15,840 bales, consisting of 4,980 American, 380 Brazil, and 10,480 East India.

MARKETS IN THE MANUFACTURING DISTRICTS

Although the advices, both from India and China—though rather more favourable than those received by the previous mail—are not of a very satisfactory character, there has been an improved feeling in the demand for goods for the Eastern markets, at full quotations. The home trade is in a healthy state—stocks are low—and machinery is running full time. In the iron districts, trade is very inactive; but coals continue to rule very high in price.

MANCHESTER, April 26.—Sellers have had a considerable advantage this week as respects chiefly the amount of business they have been able to effect, and to some extent the prices paid. The business has been rather large for India and China, though moderate for the home trade, and the prices paid have been fully those of last week. Mule and water twist, with most descriptions of cop yarns, are now in consequence practically ¼d per lb dearer. Shirtings, T'cloths, madapollams, and jacconets have become scarcer, and been more wanted. Printing cloths have shared the improvement slightly. Comparative ease in discounts, better Eastern accounts in advance of the letters expected to-morrow, the still heavily pre-occupied position of the trade, have provoked a revival after a few weeks' dulness.

BRADFORD.—The flatness in the wool market still continues. Sales are with difficulty effected, at prices which leave no profit on the transaction. The supply in the market is an average for the time of year. In noils and shorts there are less producing, which tends to keep prices steady. The export houses still continue limited buyers of yarns. Prices are fully supported, because it is impossible to produce yarns at less cost. We can only report another flat market for pieces.——LEEDS.—The market has presented no feature of importance.——HUDDERSFIELD.—Trade has manifested a slight improvement. In wool, business is good, but in some departments there is a scarcely appreciable tendency for a decline.——LEICESTER.—There has not been much doing in the hosiery trade. Light fancy goods continue out of request, in consequence of the extreme coldness of the season. Other departments are also quiet. At Loughborough and the other country hosiery districts trade is rather quiet. Yarns were very little changed in value. The wool market is firm, material continuing very dear.——NOTTINGHAM.—Lace manufacturers continue to act very cautiously as to what they produce, and are careful not to increase stock. There have been a few home buyers in the town, and some orders have been given, but not to the extent that is usual at this period of the year. The fancy trade is dull. Very few branches of the silk lace trade are active. In hosiery the demand is still falling off, and employment is not so general. This is, however, supposed only to be temporary. There is no important change in the price of material.——DUNDEE.—Linens are in but moderate request. Yarns, however, are firm in price.——BELFAST.—A good demand prevails for yarns, at fully last week's prices. The linen trade is healthy, and stocks are light.——WOLVERHAMPTON.—Mr S. Griffiths reports a general flatness in the iron trade, at the annexed rates:—Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latins, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. Pig Iron.—Staffordshire cold blast, 4*l* 7s 6d; best native hydrate pigs, 3*l* 15s to 4*l* 2s 6d; first-class all mine grey forge pigs, 3*l* 10s to 3*l* 15s; good mine pigs, with a modicum of flue cinder, 3*l* to 3*l* 5s; mine pigs, deteriorated by cinder, 2*l* 15s to 3*l* 2s; grey forge cinder pig iron, 2*l* 15s to 2*l* 17s 6d; white forge cinder pigs, 2*l* 10s to 2*l* 15s; melters, Nos. 1, 2, and 3, 2*l* 17s 6d to 3*l* 2s 6d; superior makes of all mine melting iron, 3*l* 10s to 4*l*, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 7s 6d.——BIRMINGHAM.—There is still a good deal of languor about the trade of this town. The manufactories have been going not much less than full time this week; but orders are very closely worked up.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, April 11.—Flour—The market displayed greater activity and firmness, including purchases for export. The transactions embraced about 12,000 bbls, closing within the following range of prices:—Superfine State, 5.20 dols to 5.25 dols; extra State, 5.35 dols to 5.45 dols; superfine Western, 5.20 dols to 5.25 dols; common to choice Western extra, 5.50 to 7 dols; extra Genesee, 6.50 dols to 7.50 dols; mixed to straight Southern, 6 dols to 6.20 dols; straight to good extra do., 6.25 dols to 7.50 dols; choice extra family and bakers' brands, 7.50 dols to 8 dols; rye flour, 3.50 dols to 4.30 dols; corn meal, 3.55 dols to 4 dols. Canadian flour was steady, with sales of about 120 bbls at 5.60 dols to 7.15 dols. Southern flour was firmly held, while the demand was steady, both from the domestic trade and for shipment. The sales embraced 1,500 to 1,600 bbls, closing within the range of the above prices. Rye flour was steady at quotations, with sales of about 120 bbls. Corn meal was in better request, with sales of 600 to 700 bbls Jersey and Brandywine within the above quotations. Wheat was quite active, and in good export demand. The sales embraced about 75,000 bushels, included in which were Milwaukee Club (25,000 bushels) in store for export, at 1.25 dol, and the remainder consisted chiefly of Chicago spring in store, at 1.20 dol to 1.23 dol; white Indiana at 1.50 dol, and prime white Canada at 1.58 dol, and some lots Milwaukee Club were reported at 1.24 dol. Corn was firmer and in good demand, with sales of 17,000 bushels, including Jersey, at 76c; Western mixed at 75½c, delivered, and Jersey and Southern yellow at 76½c to 78c, and Southern white at 77c to 80c. Rye was steady, with sales of 1,700 bushels State, at 80c to 82c. Oats were firm, with fair sales at full prices.

NEW YORK, April 14.—Flour was again active and firmer; sales freely made. Southern flour was also in good request, and closed at firmer prices. Wheat was less active and buoyant, with fair sales. Corn was heavy and less active, with sales at fair rates.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Although a few purchases of wheat continue to be made here and at Liverpool for consumption in Ireland, the demand for that grain, during the present week, has become much less active, but without leading to any quotable change in value. The barley trade has continued in a healthy state at extreme quotations; but malt has sold merely in retail quantities on former terms. There has been a full average business doing in oats at fully previous currencies. Both beans and peas have moved off steadily; but the flour trade has been far from active. The late improvement in value, however, is well supported.

Advices from all parts of the country state that the wheat crop is unusually backward, and that spring corn has made very little progress. The scarcity of food for stock is beginning to be severely felt in our grazing districts, and hay has, consequently, advanced considerably in price.

Throughout the Continent, wheat has tended upwards in price, and the markets generally are very firm. The stocks of wheat in the Lower Baltic ports are large, but the greater portion of them have been purchased by our millers; so that there is no prospect of any extensive additions to our warehoused stocks for some time. In the United States, there has been more inquiry for wheat, flour, and maize, almost wholly for consumption. Shipments to Europe and elsewhere continue very limited.

We understand that, since the commencement of the year, considerable inroads have been made upon the supplies of foreign grain held in the United Kingdom; hence, the trade has assumed a firm appearance, and present rates appear to be tolerably safe.

The Scotch markets have been decidedly firm for wheat, and the value of fine samples has had an upward tendency. Spring corn, especially fine barley and oats, has commanded fully previous quotations.

In Ireland, the wheat trade has continued steady, but far from active on rather higher terms. All other produce has commanded full prices, but the demand has not increased to any extent.

Only a moderate supply of home-grown wheat was on offer in to-day's market; nevertheless, the demand for all kinds ruled very inactive, at Monday's currency. In foreign wheat, very little was passing, on former terms. All kinds of spring corn commanded extreme rates; but flour was a dull inquiry.

Only 9 vessels, laden with grain, have arrived off coast since the 19th inst. Mr Ed. Rainford reports only a moderate business doing in floating cargoes, at about last week's prices.

The London averages announced this day were :—

	qrs	s	d
Wheat	3744 at	51	9
Barley	493	39	5
Oats	566	22	2
Rye	10	3t	0
Beans	132	37	8

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—There has been rather a better demand for several descriptions this week, and the lower kinds of Mauritius have sold more freely. Prices, however, remain without material change, and the market is not very animated. Up to yesterday (Thursday) afternoon, 1,833 casks West India had found purchasers, including 303 casks Barbadoes, by auction, at 36s 6d to 44s 6d. A few lots of grainy Demerara, 42s to 45s. Floating cargoes are inquired after. The week's delivery amounted to 3,900 tons, and the landings to 5,500 tons; consequently the stock has increased to 54,725 tons, against 42,500 last year, 44,400 in 1858, and 40,750 tons at the same date in 1857.

Mauritius.—9,413 bags, on Tuesday and yesterday, found buyers: grainy sorts, 37s to 42s 6d for brown to good yellow; crystallised, 43s 6d to 46s; fine brown, 37s 6d to 38s 6d; low to good, 31s 6d to 36s per cwt.

Bengal.—1,100 bags fine grainy yellow Bally sold at 45s 6d to 46s. 2,000 bags low date brown are reported privately at 29s 3d per cwt.

Foreign.—30,960 bags clayed and 2,501 bags unclayed were withdrawn, there being no fair offers made. The latter since sold at 33s to 33s 3d. 3,000 bags China sold at 35s to 37s for brown. 226 casks Porto Rico found buyers: brown, 38s 6d; low greyish to good yellow, 40s 6d to 46s 6d. Of 2,750 boxes Havana, the washed (about one-fourth part) sold: low to good yellow, 39s to 43s 6d. 822 bags good white Pernambuco were bought in at 48s. Privately, the transactions include 10,000 bags unclayed Manilla, at 31s 6d to 32s; 660 cases yellow and grey Brazil, at 41s to 43s; 1,200 bags at 37s 3d to 37s 6d; and 650 casks muscovado. A floating cargo of Havana has been sold at 27s 4½d, No. 9¾ to 10, for a near port; a landed cargo, No. 12, brought 42s; one of Mauritius afloat for this kingdom, at 36s 6d to 41s; also one of Cuba, at 26s per cwt.

Refined.—The market is steady, and there has not been any variation in prices during the week. Common goods quoted 51s to 51s 6d; middling, 52s to 52s 6d. Crushed and pieces have lately sold upon former terms. Bonded goods have become quiet. The Dutch Trading Company's sale of Java sugar on the 15th instant will comprise 83,710 baskets.

COCOA.—West India is inactive. 91 bags only have been brought forward, which sold as follows: Trinidad, 83s to 91s; Grenada, 62s to 63s per cwt. A limited business has been done by private contract.

TEA.—There has not been any improvement in the demand this week, but prices generally remain unaltered. Common congou is quoted 1s 4d to 1s 4½d per lb. The China news has not affected the market. 687 packages sold at the public sales which concluded on Monday.

COFFEE.—There has been a steady demand this week, and the public sales went off at previous rates. 775 casks 340 barrels 1,800 bags plantation Ceylon found buyers at 67s 6d to 75s 6d for fine fine ordinary to good middling. 1,760 bags 183 casks native partly sold at 60s to 61s 6d. 211 bags 83 cases East India, Nilgherry, 83s to 85s 6d; small berry, 75s; Singapore Java, 63s. 28 bales Mocha brought 125s for good long berry. 1,650 bags good ordinary brownish Rio, 58s 6d to 60s. 539 bags washed, 64s 6d to 70s. 112 casks 271 barrels and bags Jamaica, 62s 6d to 71s 6d per cwt.

RUM.—Several sales have been made this week at previous rates, including proof Leewards at 1s 9d; proof Demerara, 1s 11d to 2s 1d; Jamaica, 3s 9d to 4s 6d per gallon.

RICE.—Moderate transactions have occurred by private contract, and the market is very firm. Of 3,300 bags Bengal by auction, the bulk was taken in at 10s 6d to 11s 6d for old import (including Dacca at 10s 6d), a few lots middling selling at 11s 3d. 1,999 bags very fine white Java brought 17s. Privately, [9s 6d to 9s 9d has been paid for Bassein and Necrancie Arracan; 10s to 12s 6d for white Bengal; and 10s 6d for pinky Madras.

IMPORTS and DELIVERIES of RICE to April 21, with STOCK on hand.

	1860.	1859.	1858.	1857.

Exported	7120	7230	5680	21100
Stock	53830	78040	84900	39920

SPICES.—A large quantity of pimento brought forward resulted in a decline of ½d, and 2,645 bags partly found buyers at 3½d to 3¾d. 600 bags Aleppy black pepper have been disposed of at 4½d. 1,364 bags Singapore sold at and after the sale at 3¾d to 4d; a few lots, 4½d; and superior, 4½d per lb, being barely the former value. Of 1,355 bags rough Bengal ginger, 500 bags sold at 3s decline, viz., 21s 6d to 22s per cwt. Other spices remain inactive.

SALTPETRE.—There are sellers of Bengal at lower rates, including fine at 43s to 43s 6d, but the market continues inactive, and few parcels have been disposed of. Refraction 10¾ brought 39s 6d per cwt.

IMPORTS and DELIVERIES of SALTPETRE to April 21, with STOCK on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	5030	6200	3570	5150
Delivered	4390	5950	5000	3700
Stock	4500	3220	5000	3500

The deliveries were returned at only 80 tons last week.

COCHINEAL.—365 bags rather more than one-third part sold, and prices did not show any material alteration, although the market is quiet: Honduras silvers ranged from 3s to 3s 8d; low to mid black, 3s 3d to 4s 4d. Mexican silvers chiefly bought in, a few lots being sold at 3s 3d to 3s 4d. Teneriffe was taken in: silver, 3s 4d to 3s 5d; black, 3s 5d to 3s 8d per lb.

LAC DYE.—This article has been inactive, but holders remain firm. Of 208 chests, by auction, a few lots sold at 1s to 1s 3½d per lb for middling to fair quality.

OTHER DYESTUFFS.—Gambier is very steady at 16s 9d. A good deal of business has been done in Cutch at 26s 6d to 27s, and 28s per cwt is now demanded.

SHELLAC is still advancing. Small sales have been made in button at 10*l* to 11*l* 2s 6d, and of native orange at 10*l* per cwt.

DRUGS.—The public sales, yesterday, showed few changes of importance. Late extreme rates were barely maintained for castor oil, with a better supply.

METALS.—There has not been any improvement in this market, but prices have ruled tolerably steady during the week. Scotch pig iron, at one time quoted 53s 6d to 53s 9d, closes at 52s 9d to 53s. Export orders for manufactured do not increase. Spelter has sold at 20*l* 17s 6d on the spot, and is very firm. Tin remains quiet here and in the Dutch markets. Straits, 129s to 130s; Banca, 136s to 137s per cwt. A moderate demand exists for lead and copper.

HEMP.—Russian is quiet at the quotations. Manilla meets with partial inquiries, and holders generally ask higher prices. The sales of jute on Wednesday went off well, and 5,750 bales sold at previous rates to a slight advance: common to fine, 14*l* 5s to 22*l* 10s per ton.

LINSEED.—The consumption has been increased by the protracted cold weather. East India has sold at 49s to 51s 6d; Bombay, afloat, 51s; Calcutta, 48s; and a small cargo of Odessa, just arrived, 51s 9d per quarter.

OILS.—Sperm has declined 1*l*, and is now quoted 98*l* to 99*l*. Pale seal firm at 36*l*, and the Greenland fishery is said to be a complete failure. The demand for olive has been rather limited: Gallipoli, 61*l*; Megadore, 54*l* 10s to 58*l* 10s. A floating cargo of Gallipoli is reported at 57*l* 15s per tun for the United Kingdom. There have been few inquiries for palm: fine Lagos, 46s. Prices of cocoa-nut remain stationary: Cochin, 44s 6d to 45s; Ceylon, 42s 6d to 43s per cwt. Linseed is steady at 28s 3d on the spot, and 29s 6d for delivery in the last six months of the year. Rape continues firm: foreign refined, 41s 6d to 42s; brown, 39s 6d per cwt.

TURPENTINE.—More inquiry has been made for spirits at 36s for American. 3,400 barrels rough arrived, but no sales reported.

TALLOW.—There has been very little animation in the market this week, and it is quiet at the close. 1st sort Petersburg Y. C., 56s; April to June, 54s 6d; and for the last three months, 51s 9d per cwt, and few important contracts have been made.

PARTICULARS OF TALLOW.—Monday, April 23.

POSTSCRIPT.

FRIDAY EVENING.

SUGAR.—The sales went off with more spirit and at 6d advance in many cases. There were 264 casks Barbadoes and 11,623 bags Mauritius submitted, of which a large proportion sold. 466 bags Penang realised 38s 6d to 44s. Two cargoes of Havana, No. 12, have sold at 28s 6d for a near port. The sales of West India reach 2,540 casks for the week.

COFFEE.—89 casks 76 barrels and bags plantation Ceylon, 714 bags native and 47 casks 339 barrels and bags Jamaica sold upon fully former terms. 880 bags Singapore Java, 58s to 60s. 250 bags Maracaibo, 61s to 61s 6d per cwt.

RICE.—A floating cargo of Rangoon has been sold at 11s.

SPICES.—447 bags Penang pepper were bought in at 3¾d to 3⅞d. 49 cases nutmegs sold at full rates: low to very good brown, 1s 4d to 3s 11d. 7 cases mace, 1s 1d to 1s 6d. 119 bags pimento were bought in. A few lots Zanzibar cloves sold at 3⅜d to 3⅝d. 64 bags African ginger realised 37s to 37s 6d. 96 cases Cochin, 80s to 82s. 357 bags Bengal were bought in at 21s per cwt.

SALTPETRE.—500 bags have sold: refraction 3¾ to 1¾, 43s 6d to 44s per cwt.

OIL.—690 casks cocoa-nut part sold: Cochin, 45s; Ceylon, 42s 9d to 43s 3d. 170 casks palm were mostly withdrawn.

TALLOW declined to 55s 6d on the spot; 54s to June. 596 casks, by auction, only partly sold, including Odessa at 53s to 55s 6d per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar continues very steady; no material alteration to note in prices. Nothing doing for export. Several parcels of Dutch crushed have been sold f.o.b. in Holland, of V. O., A. S. R., and B. & H., No. 1, at 32s to 32s 6d in barrels; also a second parcel of Belgian crushed R. B. B., at 32s 9d, f.o.b. at Antwerp.

GREEN FRUIT.—Contrary winds preventing arrivals, the market is being cleared of stock, which led to an improvement in the price of oranges both here and at the outports. Some cargoes of St Michael's and Valencia sold by Keeling and Hunt at public sale at an advance of 1s to 2s per package. Lemons of sound quality dear. Nuts in demand: Brazil dropped to 40s. Price still too high for consumption.

DRY FRUIT.—In low descriptions of fruit a fair business has been done during the week. Export houses are watching the market, and show a disposition to purchase should prices go any lower. At a public sale, damaged currants sold at 29s to 33s; and red Smyrnas, sound, at

30s to 33s. Figs found buyers at 32s to 45s; Sultanas, 55s; common layer Muscatels, 47s. Clearances of all fruit going on at a large rate.

ENGLISH WOOL.—We have no change to notice in the trade.

COLONIAL AND FOREIGN WOOL.—There is no change in this market.

HEMP AND FLAX.—No Riga flax now in the market. The hemp market is steady; but not much business has been done this week.

COTTON.—Sales of cotton wool from Friday, 20th April, to Thursday, 26th, inclusive:—700 bales Surat at 4¼d to 4¾d for fully fair Dhollera to good Oomrawattee; 400 bales Madras at 5d to 5⅜d for fully fair to good fair Tinnivelly. An improved demand has been experienced this week for Surat, and prices have advanced ⅛d to ¼d per lb on the late low sales. Early in the week 100 bales good fair Tinnivelly were sold at 5⅜d, being ⅛d per lb decline; yesterday 300 bales fully fair (part of 1,400 bales advertised for public sale without reserve on the 3rd May) were sold at 5d per lb. In public sale, yesterday, 700 bales Surat, 250 bales Madras, and 16 bales West India were offered. The West India realised 8¾d per lb, the Western Madras was bought in at 4d per lb, 3½d being bid; of the Surat 300 bales sawginned were sold at 4⅛d for middling, and 4⅜d per lb for fair, and 150 bales seedy Compta at 2¾d, and 250 bales Mangarole at 2¾d to 3⅝d for low middling to fair. Advertised for public sale on Thursday, 3rd May—300 bales Tinnivelly, 200 Western Madras, and 180 Surat; also 1,200 bales Tinnivelly without reserve.

SILK.—The China silk market has been rather more active, several parcels changing hands at a reduction of about 1s to 1s 6d on the highest point. In other silks no change.

TOBACCO.—The market has not changed in character, but remains dull and neglected. Purchases have been in most cases restricted to small lots for immediate use. Concessions in prices have been submitted to for ordinary and common descriptions.

LEATHER AND HIDES.—The leather market presented no new feature during the past week. The demand is still limited, but the supplies being also moderate, there is no increase of stocks. Prices are nearly stationary: for foreign butts there is a disposition to accept slightly lower rates, but other goods are unaltered. At Leadenhall, on Tuesday, the remarkably inclement weather was sufficient to account for a very small attendance of buyers, and, consequently, for but little business. At the public sales of raw goods last week the salted Australian heavy hides supported the recent advance, 6½d being paid for Melbourne hides, but for other articles there was only a limited inquiry. About half only of the East India kips offered found buyers, and those generally at a reduction of ½d per lb. There was a small attendance of the home buyers, and very little demand for exportation.

METALS.—There is little animation in the metal market, nothing beyond a quiet business being done in any branch. Copper is maintained in price of English by a fair demand, but foreign is a shade easier to buy. Iron is very flat in all quarters, and Scotch pig, which rallied a little last week, has again receded 1s per ton. Tin is dull of sale, and prices of foreign are rather drooping. Spelter is better inquired for, and prices are stronger. Lead keeps steady at last week's prices. Tin plates find a rather more ready sale.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	56	6
Fat by ditto	2	11½
Yellow Russian	57	0
Melted stuff	41	0
Rough ditto	24	0
Greaves	16	0
Good dregs	7	0

Imports this week 149 casks.

PROVISIONS.

The bacon market is in a very unsatisfactory state, 70s f.o.b. having been refused for favourite brands to arrive to-morrow.

Butter very good in quality, but prices still rule high, owing to the lack of herbage and the scarcity of provender. Cheese still very dear.

METROPOLITAN CATTLE MARKET.

THURSDAY, April 26.—Only a moderate supply of beasts was on offer in our market to-day. Prime Scots and crosses were in steady request, at fully Monday's currency; but other breeds moved off slowly, on former terms. The show of sheep was by no means extensive. There was a free sale for Downs and half-breds, at extreme rates. Otherwise, the mutton trade was in a sluggish state. Lambs—which came slowly to hand—were inactive, except as regards the best breeds, at Monday's quotations. There was a moderate inquiry for calves, at previous rates.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	8	6	0
Second quality ditto	3	8	4	0	Large coarse calves	4	8	5	2
Prime large oxen	4	2	4	6	Prime small ditto	5	4	5	6
Prime Scots, &c.	4	8	4	10	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	0	Small porkers	4	2	4	10
Second quality ditto	4	2	4	8	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	4	10	5	6	Quarter old store pigs	23	0	30	0

Lambs, 5s 6d to 7s 0d.

Total supply—Beasts, 800; sheep and lambs, 6,525; calves, 270; pigs, 340.
Foreign supply—Beasts, 70; sheep, 412; calves, 151.

NEWGATE AND LEADENHALL.

FRIDAY, April 27.—The supplies of both town and country killed meat are moderate. Prime qualities move off freely at very full prices; but other kinds are a slow inquiry.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	3	0	3	2	Mutton, inferior	4	0	4	2
Middling ditto	3	4	3	6	— middling	4	4	4	6
Prime large	3	8	4	0	— prime	4	8	5	0
Prime small	4	2	4	4	Large pork	3	10	4	4
Veal	4	4	5	0	Small pork	4	6	5	0

Lambs, 5s 2d to 6s 4d.

HOP MARKET.

BOROUGH, Monday, April 23.—We have no change to report in our market, which continues firm, with but little doing. Mid and East Kents, 80s, 105s, 140s; Weald of Kents, 62s, 75s, 82s; Sussex, 60s, 75s, 76s.

FRIDAY, April 27.—The market is very firm, with a tendency to advance. The bine is still very backward on account of the wet winter and cold spring.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, April 23.—During the past week the arrivals coastwise have been small, but the trade continues dull. The following are this day's quotations:—York Regents, 90s to 150s; Lincolnshire ditto, 80s to 100s; Dunbar ditto, 100s to 120s; Perth, Forfar, and Fifeshire ditto, 80s to 100s; ditto Rocks and reds, 75s to 90s; Irish whites, 70s to 80s; French ditto, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, April 26.—The arrivals of potatoes coastwise and by rail have been moderate this week for the time of year, and generally in good condition. Best samples are in good demand, but a middling trade is doing in inferior kinds. Previous rates are obtained. York Regents, from 160s to 180s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto cups, 90s to 100s; Dunbars, 100s to 105s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 5*l* 0s; clover, 4*l* to 5*l* 17s; and straw, 1*l* 7s to 1*l* 14s per load. A firm trade.

WHITECHAPEL.—Meadow hay, 3*l* 0s to 5*l* 0s; clover, 4*l* 0s to 6*l* 0s; and straw, 1*l* 6s to 1*l* 12s per load. Supply moderate.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 27.—The public sales here are progressing with spirit, and East India wools met with eager competition at fully late January rates. Other descriptions, however, are in less favour, and are for the greater part withdrawn.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 27.—The grain market is firm without much activity. Wheat in steady demand, at Tuesday's rates. Flour also in good request. Oats 1d dearer. Indian corn and beans quiet, and prices a shade easier. Other articles without change.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, April 27.—There is no change to report this week in manufactured iron, the demand for which has been only to a moderate extent. In Scotch pig iron there has been rather a firmer feeling, but with little or no fluctuation in price. Copper continues steady, with a good regular demand. The lead market very quiet. For tin plates only a limited inquiry.

The Gazette.

TUESDAY, April 24.

BANKRUPTCY ANNULLED.

T. Irving, Nottingham, travelling draper.

ROYAL ITALIAN OPERA.—The first appearance of Madame Grisi is always sure of attracting a full house; that of Signor Mario no less so; when, therefore, it is added that on Tuesday these old and well-deserving servants of the public made what, in the language of operatic programmes, is termed their "*rentree*" together, in Donizetti's "Favorita"—the cast of the *dramatis personæ* being further strengthened by the new barytone, M. Faure, to whom was allotted the part of the King—our musical readers will be prepared to hear that the audience was the largest and most brilliant of the season. The Leonora and Ferdinando of the evening met with that cordial reception which has welcomed them for so many seasons, and which doubtless on the present occasion was seasoned with a certain feeling of regret that one of them was shortly about to abandon for ever the career, during which she had been enabled to win so many laurels for herself, while affording unalloyed gratification to others.

COMMERCIAL TIMES

Weekly Price Current.

EPITOME OF RAILWAY NEWS.

EAST INDIAN.—The directors of this company state in their report that in the Bengal district (419½ miles) the 24 miles between the river Adjai and Cynthea, the remaining portion of the South Beerbhoom division, had been duly opened for traffic. Mr Turnbull, the engineer, still looked forward to the completion of the three following divisions—33½ miles, 23½ miles, and 26 miles up to the Ganges at Rajmahal, by the end of June. On the North Rajmahal division, 25 miles, the works were making rapid progress; on the Colgong division, 26 miles, the works were also in a forward state, and, assuming an adequate supply of permanent way materials, the line might, with great exertion, be opened to Colgong in the spring of 1861, a distance of 247 miles from Calcutta. The works on the Bhaugulpore division, 23 miles, were well advanced; on the Jehangeerah division, 20 miles, they were making good progress, and those on the Monghyr division, 29 miles, were progressing, but would be much accelerated by a communication being formed between the line and the river at Monghyr, which was under the consideration of the Government. It was expected the Monghyr tunnel would be completely pierced during the present month. On the Soane district the works were advancing rapidly towards completion, and at the Soane bridge everything was going on very satisfactorily.

INVERNESS AND ABERDEEN JUNCTION.—The report of the directors states that the receipts on revenue account for the half-year ending the 29th of February last amounted to 20,472*l*. Out of this was deducted 2,849*l* for the Inverness and Nairn Company's per centage of traffic on their line, and 224*l* the Morayshire Company's per centage of traffic between Elgin and Orton, leaving 17,398*l*. The working expenses amounted to 8,922*l*, and the interest on loans to 3,145*l*, leaving, with 1,281*l* from the preceding account, a balance of 6,612*l*, out of which the directors proposed to declare a dividend on the capital of the company at the rate of 4 per cent. per annum, leaving a balance of 111*l* for the next account.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, April 23.—The railway market to-day was without the slightest animation, and, except a decline in Great Northern A stock, scarcely any change took place. The transactions in all departments were unimportant. In the colonial market, the only feature was a rise in Great Western of Canada shares to 13⅜ to ½ on the favourable traffic return by the present mail. Grand Trunk stock left off without alteration at 34¼ to ⅜. Foreign descriptions were quoted mostly the same as on Saturday. Pernambuco closed 1⅞ to ⅞ dis., being dull, and San Paulo ¼ to ½ dis. In American securities, there was a rise in the bonds and shares of the New York Central and New York and Erie. No bargains were recorded in British mines, but in one or two cases the final quotations were higher. Foreign adventures showed no change.

TUESDAY, April 24.—The railway market was again dull, and at one period of the day showed a general decline. Before the close, however, a partial recovery took place. Great Northern, Caledonian, and South-Eastern presented a reduction of ⅛ to ¼ per cent., while other stocks were about the same as yesterday. The general business was unimportant. Indian and Canadian descriptions were likewise slightly depressed, except Great Western of Canada shares, which were fairly supported at the late advance. In the foreign market there were few operations, and little change took place. American railway securities closed without important alteration. New South Wales Government debentures improved. Mines were dull, and in several cases exhibited a reduction. In joint stock banks, Union of London were quoted throughout the day between 26 and 28, closing at 26 to 27. No material variation occurred in miscellaneous descriptions.

WEDNESDAY, April 25.—The railway market showed a stronger tendency to-day, several of the heavier stocks closing at a slight advance. Great Northern A, however, and Eastern Counties, were rather flat. Colonial and foreign descriptions were inactive, and showed no change of importance. Grand Trunk of Canada left off 34 to ⅜; Pernambuco, 1⅞ to 1⅞ dis.; and San Paulo, ½ to ¼ dis. In American railway securities the shares of the Michigan Central and New York and Erie advanced, while those of the Illinois Central exhibited a decline. Mines were again dull, at an occasional reduction. Ottoman Bank shares were steady, at 17½ to 18. Miscellaneous descriptions closed about the same as yesterday.

THURSDAY, April 26.—The railway market was steady during the greater part of the day, but in the afternoon there was a tendency to heaviness. Several stocks showed a fractional decline, especially Midland, Lancashire and Yorkshire, Great Western, and South-Eastern. Great Northern also receded ¼ per cent. There was no feature of importance in the colonial market. Great Indian Peninsula stock was slightly higher. Foreign descriptions were firm. Lombardo-Venetian and Pernambuco especially showed an improvement. In American securities, the bonds and shares of the New York and Erie advanced. Mines were again rather dull. In miscellaneous descriptions, a rise took place in Crystal Palace, London General Omnibus, and Madras Irrigation.

FRIDAY, April 27.—The preparations for the liquidation of the account being now in progress in the railway share market, only a moderate business was transacted, and prices showed less firmness. The foreign and colonial markets were very inactive. Joint stock bank shares were flat. London Chartered of Australia declined 5*s*; London and Westminster, 5*s*; Union of London have realised 24 to 24¼.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 4s per lb; or in Tin Canisters, 3d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

A New Edition of

THE PHILOSOPHY OF MARRIAGE.

By JOSEPH KAHN,

Graduate in Medicine, Surgery, and Midwifery in the Royal and Imperial University of Vienna, Erlangen, &c., &c.

This popular work (which has been translated into four different languages) has now gone through forty-one editions of 10,000 each, and is designed to impart accurate knowledge on subjects which involve, the means of securing moral and physical happiness.

Price One Shilling, or, post free, for Twelve Stamps, direct from the Author, 17 Harley street, Cavendish Square, London, W.

DR KAHN CONTINUES TO deliver Daily, at Three and Eight o'clock, his popular Lecture on the "Philosophy of Marriage," at his Anatomical Museum, top of the Haymarket.

The Museum is open (for gentlemen only) from Twelve to Five, and from Seven to Ten. Admission, One Shilling.

Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite retaining power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures consumption, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Ruskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

KEATING'S COUGH LOZENGES.—Statistics show that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; he, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Cainscross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, Sir, your most obliged servant, W. J. TRIGG."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

TEETH.—MR ESKELL, Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic), and Bennett's hill, Birmingham. Established 1847.

HOLLOWAY'S PILLS AND OINTMENT.—Colds, Fever, Influenza.—The uncertain weather is now producing these complaints, which demand immediate attention, or serious consequences may ensue. As curative agents, nothing equals Holloway's remedies. The Ointment should be well rubbed twice a day on the back and chest, at the same time that the Pills are taken internally. These diseases weekly endanger the lives of thousands who would have been speedily restored to health by these grand preservatives, which must in every case do good and never harm. They purify the blood and arrest fever. The palpitations of the heart, shortness of breath, and sense of oppression are at once removed. The feeble and exhausted frame regaining vigour, testifies to the virtues of Holloway's preparations.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq., M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., Burton crescent, Tavistock square, London, W.C.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

MORE CURES OF ASTHMA, COUGHS, &c., by DR LOCOCK'S PULMONIC WAFERS.—From Mr Oldham, Chemist, Market place, Wisbeach: "Gentlemen,—From the great quantity of your Wafers I have sold, I have had an excellent opportunity of witnessing their effects, and I have much pleasure in being able to inform you that several obstinate cases of asthma and coughs have been completely cured by their use; and indeed, their efficacy in general in diseases of the lungs.—W. T. OLDHAM." Dr Locock's Pulmonic Wafers give instant relief, and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. To singers and public speakers they are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all medicine venders.

Just published, in 1 vol. 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,

VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.

(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternost row; and all booksellers in town or country.

MEDICAL ADVICE.

DR LA'MERT, REGISTERED L.S.A., Honorary Member of the London Hospital Medical Society, M.D. of the University of Erlangen, &c., may be CONSULTED on all cases of Debility Nervousness, and the Secret Infirmities of Youth, and Maturity, from 11 till 2, and from 6 till 8, at his residence,

37 BEDFORD SQUARE, London.

Dr La'Mert has just published, price Sixpence, with numerous Engravings and Cases, a New Edition of his Work, entitled,

SELF-PRESERVATION

which will be sent free in a sealed envelope, Mann, 39 Cornhill, London, or by the Author to any address, for eight stamps.

CONTENTS

SECTION IV.—Spermatorrhœa and Impotence—The Causes of Sterility in both sexes—Self-inflicted miseries.

SECTION V.—The Vices of Schools—Effects of certain pernicious habits on the mental and generative faculties—Importance of Moral Discipline.

SECTION VI.—Treatment of nervous and generative debility—Impotence and sterility—Dangerous results of various hazardous specifics—The Author's principles of treatment; medical, dietetic, and general, derived from twenty years' successful practice

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 11, 3, and 6 till 8. Sundays from 10 till 1.

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s: Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED,—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair; Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—

The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

A TOILETTE REQUISITE FOR

THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 22 Wellington street north, Strand, W.C.

ALLEN'S PATENT

PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand London

HANDSOME BRASS AND IRON

BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED

CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road W.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality.	Medium Quality.	Best Quality.
	£ s d	£ s d	£ s d
Two dozen full-size Table Knives, ivory handles	2 4 0	3 6 0	4 12 0
One-and-a-half dozen full-size Cheese do.	1 4 0	1 14 0	2 11 0
One pair regular Meat Carvers	0 7 6	0 11 0	0 15 6
One pair extra size do.	0 8 6	0 12 0	0 16 6

One Steel for sharpening	0 3 0	0 4 0	0 6 0
Complete Service	4 14 6	6 18 6	9 16 6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and sciasors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III., c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,
MAPPIN BROTHERS,
Queen's Cutlery Works, Sheffield; and
67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

OVERLAND ROUTE.—

HERNE BAY—Every Saturday, at 10 morning.

Offices 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other Paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

RIMMEL'S RIFLE VOLUNTEER BOUQUET is the fashionable Perfume for this season. Price 2s 6d. Entered at Stationers' hall. Rimmel's Almanack of the Language of Flowers, price 6d; by post for 7 stamps.

Patterns, designs, and directions for self-measurement sent free. N.B.—A perfect fit guaranteed.

LAWRENCE HYAM announces that his New Stock of Clothing for the Season of 1860, consisting of the largest and choicest variety of Spring and Summer attire ever designed, is now ready for inspection, and to which he solicits public attention and patronage. The greatest confidence may be placed in the durability and style of all garments, combined with the utmost economy in price.

LAWRENCE HYAM invites attention to his Surtout and Dress Coats, varying from 25s to 50s. The Material, Style, Fit, and make are perfect, and cannot fail to give general satisfaction.

LAWRENCE HYAM'S Spring and Summer Overcoat and Undress Jackets are first in fashion, serviceable in wear, and beautiful in design. Price, 16s, 21s, 30s, 42s, and 50s.

LAWRENCE HYAM'S Guinea Coats, 38s Suits, 15s and 17s Trousers, and 6s Vests, are "Household Words" in every family. An immense variety of the newest patterns to select from, specially made for the Spring and Summer Season of 1860.

LAWRENCE HYAM'S Ordered Department is complete in all its arrangements. The most talented cutters and best workmen only are employed, whereby perfection in Fit, Elegance, and Style, are always secured at moderate prices.
Observe—The only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

SPRING AND SUMMER ATTIRE.—E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.
Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.
Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.
No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.
N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.
E. MOSES and SON, Corner of Minories and Aldgate, and corner of New Oxford street and Hart street.
COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.
E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.
Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

EAU-DE-VIE.—THIS PURE PALE BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.
HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery

SAFETY BOILERS (TUBULOUS) PROVED AT A PRESSURE OF 3,000 lbs PER SQUARE INCH.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL, administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.
Extensive experience, and the recorded testimony of numberless eminent medical practitioners prove that a half-pint of DR DEJONGH'S Oil is equal in remedial effects to a quart of any other kind. Hence as it is incomparably the best, so it is likewise far the cheapest.
Palatableness, speedy efficacy, safety, and economy unitedly recomend this unrivalled preparation to invalids.
Opinion of A. B. GRANVILLE, Esq., M.D., L.R.C.P., F.R.S., Author of "The Spas of Germany," "On Sudden Death," &c.
"Dr Granville has found that DR DE JONGH'S Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Newfoundland Oils. The Oil being, moreover, much more palatable, Dr Granville's patients have themselves expressed a preference for Dr De Jongh's Light Brown Cod Liver Oil."
Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.
SOLE CONSIGNEES,
ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

FLEET STREET.
A NEW DISCOVERY IN TEETH.
MR HOWARD, SURGEON-DENTIST 52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

CANTERBURY MEETING, 1860.

ENTRIES for IMPLEMENTS, FIELD GATES, HOPS, and WOOL must be made on or before the FIRST of MAY.

TO INVESTORS.—

CONSOLS CAPITAL STOCK is a medium for employing and improving large or small sums of money in connection with Government securities. The stock is issued by the Consols Insurance Association, 429 Strand, London. Incorporated pursuant to Act of Parliament. Investments bear five per cent. per annum interest, receivable monthly, if desired.

Full particulars may be obtained on application at the chief offices, 429 Strand, London, to

THOMAS H. BAYLIS, Managing Director.

TO MERCHANTS AND OTHERS—

Very Important.—The following letter has been received by the Secretary of the Additional Curates Society:—

London, Feb. 27, 1860.

Rev. Sir,—I should be glad to know how far the following plan would meet the wishes of your Committee.

I am thinking of making a special contribution (intended to be annual for at least some years, provided nothing unforeseen occurs), towards providing additional clergy for those parts of the metropolis where they are most needed, and which are the least able to provide them for themselves.

My wish, however, is that, wherever practicable, the parish or district shall provide a portion of the clergyman's stipend to meet a grant from the fund which it is my desire to help to form. It would also be my wish that, in order to get the parish or district gradually to find the whole of the stipend, grants should only be made for a limited number of years.—say 3, 5, or 7—and with the understanding that they should annually be decreased. Should I resolve on contributing £200 or £300 a year, is it your opinion that others would be induced to join in the work? On those who make their money in a particular town or city it appears to me that there is an especial call to provide for the spiritual wants of the humbler inhabitants of that town or city, and I trust that there are many in London who will acknowledge the claim.—Yours obediently, A MERCHANT.

To Rev. W. R. Cosens, 7 Whitehall, S.W.

It is earnestly hoped that others who are interested in the humbler inhabitants of the metropolis may feel the claim upon them to provide for their spiritual wants, and assist in forming a London Diocesan Fund All communications and contributations may be addressed to Rev. W. R. Cosens, the Secretary of the Society for Promoting the Employment of Additional Curates in Populous Places, at 7 Whitehall, S.W.

CAUTION.—FORD'S EUREKA

SHIRTS.—As spurious shirts are advertised and sold as "Ford's Eureka's," none are genuine unless stamped thus:—"R. FORD'S EUREKA SHIRT, 38 POULTRY, LONDON."

Best Quality:—Six, for 42s.
Second Quality:—Six, for 33s.
Richard Ford, 38 Poultry, Bank, London, E.C.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH

Is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

NOTICE.—"BEWARE OF IMITATIONS."

LEA AND PERRINS' "WORCESTERSHIRE SAUCE"

Is pronounced by Connoisseurs to be a most agreeable addition to every variety of dish.

*** See the names of Lea and Perrins upon every label, bottle, and stopper.

Sold by Messrs Crosse and Blackwell, London; and by dealers in sauces generally.

Sole Manufacturers—
LEA and PERRINS, WORCESTER.

SOYER'S SULTANA SAUCE

Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell	Mr W. Duncan Davison
Mr W. R. Sams	Mr Jules Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS.

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Havover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

ALMINA.—NEW OPERA AT HER

MAJESTY'S THEATRE, with Mdlle Piccolomini and Signor Giuglini. Composed by J. Campana.

Cramer, Beale, and Co., 201 Regent street, and Chappell and Co., New Bond street.

NEW THEATRE ROYAL ADELPHI.

Sole Proprietor and Manager, Mr B. Webster.

First appearance in this Theatre of the celebrated American Actress, Miss Julia Daly.

On Monday and during the week, TO PARENTS AND GUARDIANS. Mr Leigh Murray, J. L. Toole, C. Selby, Romer; Miss H. Simms, K. Kelly, Laidlaw, Mrs Chatterley. After which, OUR FEMALE AMERICAN COUSIN. Messrs Stuart, Billington, C. Selby, Eburne; Miss Julia Daly, K. Kelly, Mrs Chatterley. To conclude with THE FAIR ONE WITH THE GOLDEN LOCKS. Mr J. L. Toole, P. Bedford, Eburne, Powell; Miss K. Kelly, E. Thorne, Laidlaw, Mrs Billington. Commence at 7.

ASTLEY'S ROYAL AMPHITHEATRE.

Proprietor, Mr Wm. Batty.
Manager, Mr E. Hughes.

Great and unprecedented success of the New Grand Military Spectacle, universally pronounced to be the most perfect and magnificent production ever witnessed in this Theatre.

The enthusiastic approbation bestowed upon the Novel and Varied Scenes in the Cirque, is the best assurance of the unequalled talent of the Eminent Equestrian Artistes who nightly appear.

On Monday, April 30th, 1860, and during the week, to commence with the great military spectacle, in four acts, entitled THE HISTORY OF A FLAG, graphically illustrating the Wars of Napoleon in Austria, Egypt, Russia, and France, succeeded by an incomparable Programme of Scenes in the Arena, supported by the most renowned and talented Equestrian and Gymnastic Artistes in Europe.

Doors open at ½-past 6, commence at 7. Box-office open from 11 till 4. Stage Manager, Mr W. West.

"LURLINE,"

Mr V. WALLACE'S New Grand Opera, performed at the Theatre Royal Covent garden.

ALL the VOCAL MUSIC; also, arrangements of "LURLINE" as SOLOS and DUETS for the Pianoforte, by Callcott Osborne, Favarger, Benedict, Kuhe, and Brinley Richards.

Cramer, Beale, and Co., 201 Regent street.

"LURLINE."—

The following are the favourite Pieces in WALLACE'S New and Successful Opera, "LURLINE":—

"Under a Spreading Coral," "Take this Cup of Sparkling Wine," "Flow on, oh, Silver Rhine," "When the Night Winds," "Sweet Spirit, hear my Prayer," sung by Miss Pyne.

"Gentle Troubadour," sung by Miss Pilling.

"Our Bark in Moonlight Beaming," "Sweet Form that on my Dreamy Gaze," "The Chimes of Home," sung by Mr Harrison.

"A Father's Love," "Love, Transient Passion," sung by Mr Santley.

Cramer, Beale, and Co., 201 Regent street.

LURLINE, BY WALLACE.

D'Albert's Polka, from Lurline	3s	0d

NATIONAL DISCOUNT COMPANY

(LIMITED), 35 Cornhill, London. Subscribed Capital, £2,000,000. Paid up, £385,345.

Approved mercantile bills discounted for parties properly introduced.

Money received at interest on deposit, repayable on call or at fixed periods.—By order of the Board,

RICHARD PRICE, Secretary.

Cornhill, April, 1860.

MADRAS RAILWAY COMPANY.—

Notice is hereby given, that the Eighth Annual General Meeting of the Madras Railway Company will be held at the London Tavern, Bishopsgate street, London, on Thursday, the 3rd day of May next, at One o'clock precisely, in conformity with the terms of the Company's Deed of Settlement.

The Transfer Books of the Company will be closed from the 27th inst. to the 3rd proximo, both days inclusive. Deeds of Transfer are not received at the offices of the Company while the books are closed.—By order of the Board,

JAMES WALKER, Managing Director.

33 New Broad street, E.C., London, April 14, 1860.

THE EAST INDIAN RAILWAY

COMPANY require 1,000 TONS of SMITHY COAL (Tanfield Moor or Garesfield), to be delivered at Calcutta. Tenders are to be made on or before 12 o'clock at noon, on Tuesday, the 8th May. Tenders must be endorsed "Tenders for Smithy Coal."—By order of the Board, D. I. NOAD, Secretary.

East Indian Railway House, Alderman's walk, New Broad street, London, April 21, 1860.

THE EAST INDIAN RAILWAY

COMPANY require a Quantity of STOURBRIDGE FIRE BRICKS, plain and to pattern. Particulars may be obtained by application at the Company's offices, Alderman's walk, New Broad street. Tenders, which must include all charges for packing and delivery free alongside in any dock or on any wharf, or in any part of the stream in the ports of London or Liverpool, are to be made on or before 12 o'clock at noon, on Tuesday, the 8th May instant. Tenders must be endorsed "Tenders for Fire Bricks."—By order of the Board, D. I. NOAD, Secretary.

East Indian Railway House, Alderman's walk, New Broad street, London, April 21, 1860.

THE EAST INDIAN RAILWAY

COMPANY require STORES of the following kinds.—Particulars may be obtained by application at the Company's offices, Alderman's walk, New Broad street.

Iron—Pig, Bar, Plate L and T of all descriptions, about 560 tons
Lead—Pig and Sheet
Copper—Ingot, Sheet, Pipe, Rod and Wire
Brass—Sheet, Rod, Pipe, Wire and Wire Gauze
Block Tin and Tin Plates
Zinc Cake
Steel of various descriptions
Vices
Anvils
Hammers
Ratchet Braces
Files
Steel Letters
Saws
Carpenters' and Joiners' Tools
Iron Locks
Brass Hinges
Nails
Firing Shovels
Oils, Varnishes, and Colours, of various descriptions
Paint Brushes
Brass-wire Sand Sieves
Crucibles for Brass Foundry
Emery Cloth
Glass Paper
Emery, Flour and Corn
Pummice and Rotten Stone
Black Lead
Wash Leathers
Soap
Leathern Hose Pipe
Indian Rubber ditto
Vulcanised Indian Rubber
Cotton Waste
Worsted Trimming
Bunting for Signal Flags

Tenders, which must include all charges for packing and delivery free alongside in any dock or on any wharf, or in any part of the stream in the ports of London or Liverpool, are to be made on or before 12 o'clock at noon, on Tuesday, the 8th May next. Tenders must be endorsed "Tenders for Stores, &c."—By order of the Board, D. I. NOAD, Secretary.

East Indian Railway House, Alderman's walk, New Broad street, London, 21st April, 1860.

SWEDISH PROVINCIAL

MORTGAGE LOAN for £450,000 sterling, negotiated in 1852 by Messrs Palmer, Mackillop, Dent, and Co., and Messrs Charles Tottie and Sons.—Notice is hereby given that, in conformity with the stipulations of the contract of the said Loan, providing for the liquidation of the same, there were this day drawn by lot, in the presence of William Tottie Esq., his Swedish and Norwegian Majesty's Vice-Consul, William Webb Venn, public notary, and two witnesses, the undermentioned Seventeen Bonds of the said Loan, amounting to the sum of £2,900 sterling, to be Paid off at par on the 1st June next, viz.:—

		£	£
1 Bond, A, No. 119	of 400		400
3 Bonds, B, Nos. 177, 250, 358	of 300	each,	900
4 Bonds, C, Nos. 106, 161, 290, 548	of 200	each,	800
7 Bonds, D, Nos. 90, 114, 152, 223, 224, 442, 445	of 100	each,	700
2 Bonds, E, Nos, 9, 183	of 50	each,	100
			2,900

And the Gothenburg Mortgage Association do hereby inform the holders of the said bonds, that they will be prepared to pay off the same at par upon presentation on that day, or any succeeding day (except Saturday), at the counting-house of their agents, Messrs Dent, Palmer, and Co., 11 King's Arms yard, Moorgate street, London.

THE OBJECTIONS MADE GOOD AGAINST THE REFORM BILL.

THE Reform Bill has passed its second reading. It has had the best counsel which the House of Commons can furnish to defend it, but they have not succeeded in winning for it any hearty support, while the friction of debate has developed a good deal of hearty though long latent disapprobation. It is a good opportunity to sum up the objections which have been really made good against it in its present form, in order that some portion of them at least may be removed by amendments in Committee.

1. The Bill lends the sanction, and the deliberate sanction of its authors to the principle, that a gradual descent in the property qualification requisite for the franchise, unbalanced by any guarantee against the overwhelming numbers of the classes thus gradually included, is the true way of adapting the English constitution to the changing conditions of our political society. That it does this deliberately no one can deny. There is no necessity for the Bill, except the exigencies of political justice. Mr Gladstone and Lord John Russell have both assured us,—and we need not say we agree with them, for we urged the same view long before Mr Gladstone adopted it,—that it is far wiser to grant a statesmanlike and complete measure of justice when there is no storm of popular passion, than to wait until it is raging at the door. This, then, is a measure shaped by statesmen in conformity with their own views of justice. It will be quoted by statesmen of the next generation with all the authority of a measure that arose from no popular exigency, but was the matured result of political foresight. And the essential principle of the measure,—if it have a principle,—is to admit gradually, to an equal *individual* political influence in England, all who can be fairly regarded as up to the standard of the 10*l* householder of 1832. The actual and corporate influence of the new classes admitted is wholly ignored; the certain and obvious fact that the man whose wishes are usually echoed by 100,000 other electors will have more of his own way in political affairs than the man whose wishes are supported only by 50,000, independently of the intrinsic wisdom or folly of these wishes, is kept out of sight; and everything is made to turn on the individual fitness of the new candidates for electoral power. Mr Gladstone's speech on Thursday night carefully, and we may almost say anxiously, avoided the question of principle. He tried to narrow the issue to one of fact,—as to the actual effect of the present Bill. "I grant you," he says, "that "you might corrupt the working class of this country if you "gave it a monopoly of power, but it is not now corrupt, and "the question is would this Bill give it a monopoly of "power?" But this is not the true question. The real objection, as Mr Gladstone must well know, to this measure is, that, once passed, all chance of defeating the democratic *principle* is in all probability lost for ever. If, in a moment of profound popular tranquillity, Parliament is once induced to affirm that the true Reform policy requires the unconditional enfranchisement of new classes without any calculation of the corporate influence they will thus attain in the constitution, then all hope of resisting further applications of the same principle in future is at an end. Household suffrage, unbalanced by any guarantee for the continued influence of the higher classes, is a political certainty in the future, and probably in no distant future. The policy of successive enfranchisements which Mr Gladstone so much approves, is sound enough in itself,—but most unsound without due limitation of the corporate influence of the classes admitted. If that limitation is ignored now, after full discussion, without any external pressure, in the face of abundant warning,—ignored by Parliament with its eyes open,—then, in a country where the force of precedent is so great, the error can never be retrieved. Even admitting to the full the accuracy of the Government statistics and calculations upon those statistics, we say that this is a cardinal objection to the Bill in its present shape. The simplest, if not the most practicable remedy might be, as an able correspondent urges in another column, to engraft on the measure the principle of plural voting, in which case the 6*l* qualification might be safely reduced from time to time with proportionate rectifications of the scale of votes.

2. But the Bill, as it stands, is not only a half-measure, it is not even true to its own defective idea. That idea is to include those and only those who can reasonably be admitted on their own individual merits without regard to their class-numbers. The present Bill does not act up, does not even pretend to act up to this idea. Its supporters maintain, truly enough, that a large number of 6*l* householders in the great cities belong to a class of much sagacity, independence, and political thoughtfulness. But they do not and cannot maintain that the 6*l* householders in the rural boroughs belong to this class. We know the reverse to be true. We know the poorer householders of the rural boroughs to be a class thoroughly careless of political considerations, and anxious chiefly to profit pecuniarily by their votes. And what a strange rejoinder is it to such an objection to say, with Mr Gladstone, that many above the 10*l* limit, nay, some even above a 20*l* limit, are open to the same imputation! Of course they are. But is it worthy of our most eloquent orator and most thoughtful statesman to argue that, because there is a corruptible element already, it is wise to extend it indefinitely? The more there is already, the stronger is the argument for not multiplying it,—and the plea of mere uniformity remains the only excuse for adding corruptible electors in large numbers to the rural boroughs, on the ground that we are adding incorruptible electors in large numbers to the manufacturing cities. This plea of uniformity was so fully discussed last year on occa-

sion of the Tory Reform Bill, and is so ably disposed of in the letter of another correspondent, who cites the Lord John Russell of 1821 to answer the same statesman in 1860, that we will not dwell on it further here. That a Bill which professes to take its stand on class-fitness should admit a notoriously unfit class to the franchise, because they come accidentally under the same schedule as others well fitted for it, is a self-condemnation which can hardly escape alteration.

These then are the conclusive objections which have been made good against all argument, in the recent discussions,—that the Bill, as it now stands, endorses the principle of conceding, bit by bit, the whole electoral power to the most numerous class,—and that even when regarded only as a temporary settlement, it concedes the franchise to a large body of electors confessedly dependent and corrupt. The only reply which is made to these objections is an appeal to the abject regard of Englishmen for precedent. How, it is said, can you get over these difficulties without new and politically untried machinery in the one case,—without invidious distinctions between the 6*l* occupiers of cities and of small boroughs, in the other case? Assuredly they cannot be surmounted without braving this terrible necessity of departing from the form, in order to adhere to the spirit, of the present constitution. A greater risk might surely be hazarded for such an end.

THE PRACTICAL DETAILS OF THE FRENCH TREATY AND THE CHAMBERS OF COMMERCE.

It is possible that some of our readers may not have fully apprehended the observations which have appeared in our pages and elsewhere from various Chambers of Commerce on the details of the French treaty. The points now under discussion are, however, both very simple and very important.

The French treaty is in some sense an incomplete document. It leaves a most important point for after consideration. The first article provides the maximum for the French duties on all the enumerated articles of English manufacture; they are "in no case to exceed 30 per cent. *ad valorem*, the "two additional decimes included." But what these duties are to be it has left for subsequent discussion. Article XIII. provides:—"The *ad valorem* duties established within "the limits fixed by the preceding articles shall be converted "into specific duties by a supplementary convention, hich "shall be concluded before the 1st of July, 1860. The "medium prices during the six months preceding the date of "the present treaty shall be taken as the bases for this con-"version. Duties shall, however, be levied in conformity "with the bases above established:—1. In the event of this "supplementary convention not having come into force be-"fore the expiration of the period fixed for the execution by "France of the present treaty. 2. Upon those articles the "specific duties on which shall not have been settled by "common consent."

This clause has given rise to two difficulties. First,—The easiest duty to the Custom Houses of every country is a specific duty. It simplifies business to say that all goods of a certain kind shall pay such and such charges. But a specific duty, though applicable to a raw material which changes but little in quality, is inapplicable to varied manufactures which have a long ascending scale of qualities, beginning with a cheap and coarse sort and ending with a very dear and fine sort. Although, therefore, a specific duty on English manufactures would be more convenient to the French *douane* than any other duty, it is clearly inapplicable to the case. It would exclude the very articles which the treaty was meant to include. The excellence of England is rather in the coarse and homely sort of manufacture than in the fine and costly. A specific duty of so much per article is a much heavier tax on the lower sorts of qualities than it is on the higher, and in proportion acts as a greater discouragement to their importation. The only duty which can be levied on manufactured goods, without operating as a prohibition to the cheaper kinds of them, is an *ad valorem* duty.

But, secondly, as to an *ad valorem* duty, there are also difficulties in the French treaty. It states that the prices of the six months immediately preceding the date of the treaty that is, immediately preceding the 23rd January, 1860,) (hall be taken as the standard for fixing the value by which she duties are to be regulated. But in many articles of English manufacture the price during those months happened to be exceptionally high, and the standard agreed on is consequently unfavourable to us.

And, thirdly, it is in the nature of things that an *ad valorem* duty on manufactured articles of which the first cost is continually being reduced by improvements in manufacture, becomes progressively a heavier and heavier one. Prices fixed this year will require adjustment a short time hence. If the French share with us the improvements in manufacture which reduce the prime cost of the article, a duty fixed *ad valorem* on the price of the 1st of January, 1860, will, as time goes on, become an increasingly protective duty.

Fourthly, as we have more than once remarked, a duty of 30 per cent. *ad valorem* is really *a protection* of much more than 30 per cent. All nations, it may be readily admitted, are on a level in the purchase of raw material; they differ in manufacturing power. A duty of 30 per cent. on the article produced, is a protective duty of much more than 30 per cent. on the element in which the two producing nations compete. As the Bradford Chamber of Commerce remark:—"The "Council believe that 30 per cent. *ad valorem* upon worsted "yarns would be equivalent to a prohibition, because the "price of raw material forms a much larger proportion of "the cost than in woven fabrics. Thus, upon yarns of the "present value of 13s the gross, the raw material costs "11s 3d, and labour and interest upon capital is only 1s 9d." In coarse manufactures, such as the English excel in, the cost of the raw material is evidently a larger element in the value than it is in the case of highly-finished manufactures.

The result of these four considerations is, that we are still quite in the hands of the French Government. They *can*, in strict conformity with the treaty, impose a specific duty which would practically exclude all the coarser sorts of manufactured goods. They *can*, in many cases, impose an *ad valorem* duty which will practically exclude our goods, because the value is estimated at an unusually high price. They *can* on all articles of manufacture fix a duty which *will* be in time prohibitive, for the value of all manufactured articles tends to be lower and lower as time goes on, and, if we allow time enough, a duty which was imposed as 30 per cent. *ad valorem* will soon become one of 60 per cent. They *can* impose a duty which may not seem excessive, but which will be really prohibitive, because a small *ad valorem* duty on the article will be a great protection to the French manufacturer of articles in the cost of which manufacturing power is a slight, and the price of the raw material a large, constituent element.

We are, therefore, entirely in the hands of the French Government. That Government can say whether, as far as respects our manufactures, the treaty shall be a reality or not. We hope it will be a reality. The French Emperor, we believe, is sincerely desirous of free trade; he would not have made this treaty with us, unless he had wished that it should be an important measure. What counteracting influence the French Protectionists may have over him, we can only know from the event.

LEGISLATION AT CALCUTTA IN REFERENCE TO THE INDIGO DISTURBANCES.

We learn, with surprise and regret, that the Government of Bengal has thought it necessary, with reference to the disturbed state of the indigo districts, to resort to special legislation for the purpose of summarily enforcing engagements to grow indigo. By the Act which was about to be introduced into the Legislative Council, the magistrates would be authorised, on a summary investigation, to compel the ryots to fulfil these engagements, under pain of fine and imprisonment. We have already informed our readers that a measure of this kind has long been demanded by the planters, but was always refused by the Government. This refusal was avowedly made on the ground that the ryots never entered into a contract to grow indigo of their own free will, but only under violent and illegal compulsion; that the cultivation of this crop was notoriously attended with risk; and that the ryots seldom received a fair price for it when grown. We defy denial of these facts. They are admitted alike by officials and planters; they are asserted in hundreds of public documents.

That a small body of planters should be able to force

housands of ryots to contract engagements to grow a crop of which they loathe the very name, may seem incredible to Englishmen at home. It is difficult to the inhabitants of Western Europe to realise the abject timidity of the Bengalee peasant, the crushing effect of centuries of oppression, and the unlimited power which the landholders everywhere exercise over the persons or fortunes of their tenantry.

Our administration is able to afford but slight protection to these miserable peasants. The magistrates are too few in proportion to the vast area of their jurisdictions, and our finances will not permit us to increase their number. The police, through whom alone the magistrates can act at all, are so corrupt that they are the mere creatures of those who will bribe them, whether planters or zemindars. If a tenant, goaded by some unusually severe injustice, ventures to complain to the magistrate, his witnesses are tampered with or locked up, his crops cut during his absence, and he himself threatened with a retaliation that shall never cease. Thus it is that the landlord or planter possesses unlimited power over his tenants to force them into engagements which they detest. We have before us a copy of a despatch, written only in October last, by the order of the Lieutenant-Governor of Bengal, in reference to several petitions which he had received from the ryots of Muddea, complaining of oppression from the planters. In one of these, the complainant states that he had been kept in confinement for more than a month, dragged about from place to place and beaten, because he refused to take advances for sowing indigo. In the course of his despatch, the Lieutenant-Governor uses the following remarkable words:—"These cases, which are known to be "of daily occurrence, in which ryots are kidnapped and "imprisoned, and carried from place to place by zemindars "and planters, with impunity, are a disgraceful blot upon "the district administration in Bengal."

We learn that the proposed Bill is to be moved by Mr Sconce, the member representing the interests of Lower Bengal. Now, this officer was five years ago the chief judge of the district in which the present disturbances commenced, and we have before us a report which he submitted to Government on this very question of summarily enforcing these indigo contracts. We regret that our space will not permit us to publish this ably reasoned paper *in extenso;* we can only give the following important passages:—

"It is admitted that planters cannot cultivate indigo by "their hired labourers. They cannot make it pay. Planters, "therefore, prefer to throw the expenses of cultivation on "the ryots.....An advance of two rupees a beegah "cannot justify the assertion of every sort of right, "nor is it in any fair sense a measure of the ryot's duty to "labour, or the remuneration of his labour and his expenses "additional to his own labour. Rather is it the reverse of "the acknowledged remuneration of an exacted or required "service. for, to whatever extent the crop fails, the labou "is practically disavowed, and the money paid in anticipa- "tion is written back as a debt against the ryot..... "Again, it is universally assumed that, in this district, ryots "do not retain more than a half or a third, or less than a "third of the advances ostensibly paid to them. The chief "or a large portion is absorbed by the factory *omlah* (ser- "vants).....I do not know to what extent the "advance consists, partly of cash, and partly of unliquidated "balances of past years. I have seen cases in which the "advance, expressed in a renewed contract, consisted wholly "of the balance of an account.....The remedy (for "misappropriating advances) is in the hands of the planter. "Let him not advance at all. Let, then, the ryot cultivate "his land in his own way,—with indigo, if it be profitable, "and with advances, if advances be desirable to him, paid "at the risk of those who are willing to accommodate him. "It is the business of the legislator to exhaust, not to "increase, the opportunities from which spring public crime."

It would be impossible to add anything to these arguments against the measure which Mr Sconce himself has now been instructed by the Government of Bengal to bring forward. We cannot understand on what grounds that Government undertakes to enforce contracts which are illegally forced upon one party by another. If a traveller were captured by banditti, and under compulsion forced to sign a deed assigning to them the whole of his property, what court of law would think itself bound to enforce such an engagement? In point of fact, the position of the Bengali ryot is not unfrequently that of the traveller in question. About eighteen months ago Mr Wingrove Cooke, the *Times* correspondent, published in that paper some interesting letters describing the Factory Indigo System from the planters' point of view. Mr Hampton, a well-known planter, confessed to Mr Cooke that no native "ever grows indigo by choice;" and that if one of his ryots, after being beaten, was to lay an information in the magistrate's court against him, "he would on his return get a much more severe flog- "ging, and be made to pay the fine" imposed upon the planter. "As to force, the ryots themselves carry out "my decisions. Woe to the man who does'nt obey them." (!)

There is another fact to which we would call special attention, viz., that when a ryot has once entered into an engagement to grow indigo, though it be for one year only, he is generally obliged to grow indigo *for ever afterwards.* To effect this, a balance is kept against him in the planter's books, though he may bring indigo worth five times the amount of that balance, or even offer to pay it off in cash. Suppose there is a balance against him of 5 rupees, and he brings indigo to the value of 10 rupees, the planter will write off 2 rupees perhaps, and give him the balance of 8 rupees in cash; but nothing will induce the planter to take the ryot's name off his books, for, otherwise, the ryot would refuse to grow indigo again, and the planter would have to compel him by a course which he would rather avoid, as being troublesome and dangerous.

Such being the the circumstances under which engagements are constantly entered into, we say emphatically, that the planter should reap the fruits of his own work.

Doubtless, it often happens that the ryots, without compulsion, take the advance; because, as we have explained in a previous article, they are always living from hand to mouth, and are overburdened with debt. But, with such a police as we have described, with universally prevalent habits of fraud, perjury, and violence, it will always be difficult to ascertain the truth in these cases, and to distinguish between a voluntary and an involuntary engagement. The system of "advances" will always be attended with violence, injustice, heart-burning, and exasperation. It is a system of no real advantage to the ryot under any circumstances, and it enables ill-disposed landholders to resort to an amount of injustice and oppression which is rendering the whole agricultural population dangerous and disloyal. So far from such a measure as that now proposed being of any permanent use in crushing the spirit of disaffection, which it is intended to meet, it can only have the effect of driving the people to despair.

The Government may overawe them for a time with their police, and the planters may be enabled to resist attacks on their factories by levies of discharged sailors and soldiers,—but the people will nourish a burning hatred towards our race and government which will in due time burst forth into an agrarian war. Parliament should at once be made acquainted with the grounds upon which the Government of Bengal have felt obliged to resort to a policy which is at direct variance with what they have for years avowedly pursued; and we trust that the subject will meet with the serious attention of the Government at home.

THE FRAUD ON THE UNION BANK OF LONDON.

It is much to be wished that more complete information than we now have respecting the fraud on the Union Bank of London may soon be given to the public. The report from the Directors, which was last week published in our City article, suggests several questions to which it is important to have a reply. It is not only the magnitude of the fraud which attracts attention, it is the greatness of the establishment in which it has occurred. The credit of the large Joint Stock Banks of the Metropolis is in some sense national property. It is impossible not to feel a pride in those great establishments, which have grown up with no legislative encouragement—which were impeded by legal difficulties—which have had to struggle with very many prejudices—which were long treated by their older and more aristocratic contemporaries with suspicious superciliousness, and which, nevertheless, have obtained the victory over them. In any other country but England the Union Bank of London would be a subject for national boastfulness. The *Crédit Mobilier* has a

European reputation, yet the funds at its disposal are very much less than those at the disposal of the Union Bank; they are much less discreetly managed: the dividends of the Union Bank are always steady and good; those of the Credit Mobilier have always been fluctuating; sometimes it has not paid a dividend at all; and the result of its last year's operations is by no means satisfactory. If the Union Bank were the only Joint Stock Bank in London, it might fairly be made a ground for national pride, just as the Crédit Mobilier was.

We do not, therefore, apologise for speaking frankly upon the great fraud which has recently been made public. We should feel that we were neglecting a duty if we did not do so. Publicity is the life of these great Banks. If the day should ever come in which they do not court discussion, their real greatness, the true source of their credit, will be at an end.

The general nature of the fraud is now known to almost every one, and is curiously simple. Mr Pullinger concealed the genuine pass-book which gave an authentic statement of the account of the Union Bank with the Bank of England, and substituted a false one in its place. The false one, of course, was duly compared with the ledger; but, as it had been falsified for the purpose of such comparison, its errors were not detected. No system of mere bookkeeping can detect errors of this sort. The accounts of the Bank were perfectly right; and the accounts of the Bank of England were perfectly right. The fraud consisted in contriving that they should be imperfectly compared.

As far as we can judge from the information now before us, the Managers of the Union Bank are chargeable with three errors:—

1st. They allowed the pass-book of the Bank to be in the exclusive charge of one person. It is possible that there may be facts not yet divulged which may alter our judgment, but it would seem that Mr Pullinger must have always been in possession of the real pass-book when it was at the Bank; that he must have anxiously watched for the "Junior" who brought it from the Bank of England; that he could never have permitted it to be out of his own custody, for a casual examination of it must have led to the discovery of the fraud. No lengthened examination of the accounts would, in all likelihood, have been necessary. The ledger-keeper, or whoever else compared it with the ledger, would have known at once that it was not the book he was accustomed to compare with the ledger. No single clerk ought to be intrusted with the sole custody of such a document.

2ndly. The Directors of a Bank ought not to trust to any mere pass-book for so material an item in their assets as half a million sterling. On the face of it, a pass-book is an uncertificated document. It bears no signature; as this very case shows, a false one may be manufactured with some degree of facility. If the account had been a small one, we might not have believed very great strictness to be essential. But 500,000*l* is a serious sum. We think all important assets in the balance sheet of a Bank should be verified by some attested document, by something more than an unsigned and possibly fictitious pass-book.

3rdly. The Directors of the Union Bank can hardly have enforced the admitted principle that all the *employés* in a Bank should, whether they wish it or not, at times be absent from the Bank. A compulsory holiday of the clerk is the greatest protection to the master. If he is absent at proper times, and if his whole work at such times is done by some one else, it is scarcely possible that large frauds should occur. It is not likely that a confederate can always be at hand to disguise the misconduct of the principal. We are aware that this rule is not a very easy one to enforce. It seems suspicious to make a man take a holiday who does not wish for a holiday. Probably Mr Pullinger was always at hand, was always anxious about his duties, never wished to be relieved from them. But if minor difficulties had been conquered,—if this single principle of proper management had been adhered to,—the large fraud which has been perpetrated must have failed. At least such is the only inference we can draw from the documents that have been made public. We think it our duty to draw especial attention to this part of this case, because it is one of the very few points on which the shareholders of a Bank can usefully exercise a control. They must rely on the Directors and Managers for all checks of detail, for all questions of bookkeeping; but they can a whether the sound regulation of a compulsory holiday *all cases* is enforced, and, if it is not enforced, they can requi that it shall be.

EXPERIENCE AND REFORM.

TO THE EDITOR OF THE ECONOMIST.

Clevedon, May 2, 1860.

SIR,—There is a passage in Lord John Russell's speec in the debate on the second reading of his Reform Bill yesterda week which merits more attention than I think it has re ceived. He mentioned some of the schemes proposed fo giving a representation to property and intelligence as we as population, and set them aside summarily. "Mr Fo "said, and I believe with truth, that if the wisest man wh "ever lived were to set about framing a constitution, h "could not invent one which would be even of a tolerabl "character. Concurring in that view, I for one, while I am "a reformer, and while I am desirous to improve our pre "sent political system so as to render it suited to th "changing circumstances of the times, am prepared to stan "by the *old constitution of the country*."

Now, I only wish that Lord John Russell would give us th old constitution of England. In that constitution there was n uniformity of franchise: almost every place had a franchise of its own. More than forty years ago Lord John Russel published a treatise on the British Constitution, in whic there are some sound reflections on this point.

"One remark more may be made here. The authors o "the plan proposed in 1797, after having sacrificed the whole "present constitution of Parliament to uniformity, break "that uniformity by proposing that the country should send "more members in proportion to their population than the "towns. Had the plan succeeded, such a blot could not fail "of being hit. The inhabitants of towns might justly have "complained, that they, who were more enlightened than "country labourers, were defrauded of their due share. A "new plan would have followed, and the Government would "have been placed in the worst of all hands; viz., the popu- "lation of large cities:—London alone would have sent 50 "members, Manchester and Glasgow in proportion. Such "objections as those that I have mentioned might have "been sufficient to deter the House of Commons from adopt- "ing a new map of representation. But when we are ex- "amining the principles of the English Government, it is "necessary to endeavour, as far as we are able, to lay down "some general rules for the formation of the assembly of the "Commons of a limited monarchy. A few may suffice, both "for the author and the reader.

"All parts of the country, and all classes of the people "ought to have a share in elections, otherwise the excluded "part or class of the nation will become of no importance in the "eyes of the rest; its favour will never be courted in the "country, and its interests will never be vigilantly guarded "in the legislature. And in proportion to the general free- "dom of the community will be the discontent excited in the "deprived class, by the sentence of nullity and inactivity "pronounced upon them. Every system of uniform suffrage, "except universal, contains this dark blot. And universal "suffrage, in pretending to avoid it, gives the whole power "to the highest and the lowest, to money and to multitude, "and thus disfranchises the middle class, the most disinter- "ested, the most independent, and the most unprejudiced of "all. Nor is it necessary, although every class ought to "have a voice in elections, that every member of that class "should have a vote. A butcher at Hackney, who gives "his vote perhaps once in twelve years at an election for "the county of Middlesex, has scarcely any advantage over "another butcher at the same place who has no vote at all. "And even if he had, the interest of the State is in these "matters the chief thing to be consulted; and that is as well "served by the suffrage of some of each class, as by that of "all of each class."

It is to be wished that Lord John would act on these well-weighed opinions, which he has never, so far as I know, disavowed or disclaimed. The plan which I ventured to suggest for giving representatives to the working classes, proceeds precisely on this principle which he has explained. I would give a preponderating influence to the working classes in the towns where the best of them are to be found. The idea of

our old constitution was that of various franchises for various classes, and this is the principle which I venture to think we should now seek to extend and revive.

Again, the old constitution of England has another lesson to teach us in this matter. Though its principle—the principle of a varying franchise—was good, its practice was in later times not very good. In the year 1832 it was evident that the principle had not been applied judiciously. In a large number of small towns there was something like household suffrage; "all inhabitant householders not paying "alms" is a very common description of the electoral body in petty boroughs; potwallopers and scot and lot voters are common also. The effect was a natural one. These poor voters were morally and intellectually unfit for the franchise; they wished to be well paid at each election, and they wished for nothing else. Accordingly, in 1832 it was deemed wise to *dis*-franchise them; and the Reform Act of that year was to this extent an anti-democratic measure; it *raised* the property qualification in towns where it was too low.

Sir G. C. Lewis explained this subject in the late debate with his accustomed accuracy. "The uniform 10*l* suffrage, "then introduced with respect to boroughs, was accepted at "the time as a sufficiently popular suffrage; but compara- "tively little contest took place on that question. I think it "material, with respect to the present Bill, that we should "know what was the effect of the change of the suffrage at "the time of the Reform Bill. A return (No. 129) has been "laid on the table which enables the House to test the figures "I am about to read. The total number of voters in boroughs "in England in 1830, the year before the Reform Bill, was "168,375; and the registered electors in boroughs in 1832-33, "according to the first registration after the passing of the "Bill, was 286,234. But to make the comparison fair, it is "necessary to compare those boroughs which existed both "before and after the Reform Bill; I deduct, therefore, the "voters in the disfranchised and enfranchised boroughs. "After making that deduction, and confining the comparison "to boroughs existing both before and after the Act, the "number of voters would stand thus:—in 1830, 162,640; "and in 1832-33, 201,794; showing, under the operation of "the Reform Act, an increase of 39,154. The operation, "therefore, of that Act, in increasing the total number of "voters in boroughs, existing both before and after the Act, "was not very considerable." When we consider that in various large places the suffrage before 1832 was very restricted; for example—

In Bath there were only.....	30	voters in	1830
In Portsmouth there were only.....	40	—	—
In Plymouth there were only.....	192	—	—
In Salisbury there were only.....	54	—	—
In Scarborough there were only.....	35	—	—
In Wigan there were only.....	93	—	—

it will be evident that the effect of the Reform Act of 1832 must have been to elevate the qualifications for the franchise in many other boroughs. The great diminution in the number of voters, caused by the Act of 1832, in such places as Leicester, Preston, &c., will be seen by a single glance at the Parliamentary Paper (No. 129) which I have just cited. Nor would the full effect of its enactments on this point be felt at once. It continued many of the old species of franchise for the lives of those who then possessed them, and they have been dying out ever since.

From these facts we should, I think, draw three conclusions:—

First,—That the framers of the last Reform Act felt deeply the evils of a low qualification for the franchise in small boroughs; and that the nation, with a fresh experience of those evils, readily assented to its abolition.

Secondly,—That the common argument for the present Bill, from the experience of the Act of 1832, is a fallacious one. What was then done is no precedent for that which is now proposed. We did *not* indiscriminately lower the franchise in 1832; we did not admit in every constituency great numbers of persons of a low class; we did not move simply and plainly towards democracy; we disfranchised the incompetent, as well as enfranchised the worthy.

Thirdly,—That a varying franchise in the boroughs, according to their size and nature, is the old English franchise; and that there can be no constitutional reason for not reviving it. It may, indeed, be said that you cannot create inequalities; that before 1832 they grew up gradually; that it is impossible now to revive them. I do not say that it is easy to revive them. But we should consider where we stand. Unless we *create something*, we shall have a democracy. The question now is, what securities against democracy we *can* create: none of them are easy; none of them are perfect: which is the least defective and the least difficult to obtain?—I am, yours, faithfully, WALTER BAGEHOT.

PLURALITY OF VOTES.

STURGES BOURNE'S PRINCIPLE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is discovered that suggestions for balancing an extension of the suffrage are novelties and will not be listened to for one moment. So we are assured by those who yet think it quite natural to propose that members without boroughs, and a Parliament which by a Reform Act has condemned itself as inadequate to represent of the people, should continue for two years to make laws and impose taxes. After this, who shall presume to define a constitutional novelty, or explain the necessity of Parliamentary responsibility?

There is no cry so shallow or so senseless as the cry of novelty. It is the excuse of the careless, the rank and file, of those who are not called upon to act, and are not responsible for the stability and the progress of society. It is the treacherous self-deception of men who dislike an impending change, and who choose rather to comfort themselves with the belief that it will not come, than take up the distasteful task of studying the means to render it harmless. It is the cry which defers improvement till it is impossible, and at last substitutes revolution for reform. It selects for its favourite victims the thoughtful, the reflective, and, above all, the philosophical; but it is powerless against the stern realities of democratic innovation. To try to stop Mr Bright by the complaint of novelty, or to save Savoy by the remonstrance that annexation by universal suffrage was unprecedented, would be as ridiculous as to assail a wild elephant with a pocket-pistol. The reproach of novelty is able to paralyse a Galileo or a Wickliffe; but it is impotent against a Cæsar, a Danton, or a Napoleon.

What is legislation but a series of innovations? What were the Reformation, the Settlement of 1688, the Reform Bill of 1832, the abolition of slavery, the steamboat and the railway, but stupendous novelties? Who have been more cruelly upbraided with innovation than the authors of these great deeds? What else have the greatest benefactors of the human race ever been but innovators?

There are novelties which are full of harm,—novelties demanded by no practical grievance, seeking only to carry out some speculative theory, aiming at no large improvement, in discord with the spirit and the working of existing institutions. But there are novelties as beneficial as they are wise: new remedies devised to combat new forms of disease, safeguards suggested by forethought to avert the outbreak of threatened evils, new developments of the undying principles hidden under antiquated methods, true reforms, adapting the outward forms of the life-giving spirit to the ever-varying exigencies of each age. These are the novelties of the physician, the engineer, and the statesman, the counsels of Jenner and of Stephenson, of Servius Tullius and the Bill of Rights. Let it not be said that a proposal is new, for that is no objection; but let it be shown to offend against the spirit of the old, to be intrinsically unsound and unworkable, to be uncalled for by any pressing requirement, and to be incapable of producing any definite good, and then let it be cast aside, not because it is new, but because it is worthless.

We are challenged to produce a principle to justify the giving several votes to a single elector. It would be enough to answer that such an arrangement would solve a practical problem of great difficulty,—that it would perform precisely the work which is wanted. It is sufficient if a member of Parliament knows that Sturges Bourne's machinery would provide a just, equal, and safe Reform Bill, although his political philosophy may not enable him to give an accurate description of its principle. A man who throws water on a raging fire may know nothing of the theory of combustion; nevertheless, he acts upon a principle, and that a right one.

What, then, is the principle of Sturges Bourne's system of graduated voting? We need not go far to find it; nor is it

quite so modern as many think it to be. It is the same principle which gives a single person a veto on the decisions of Parliament; which invests some 450 men with a personal and hereditary right to control legislation over millions; which determines the vote of the House of Commons by the majority, not of constituents, but of members; which assigns the same legislative power to the representatives of Tiverton and of Liverpool, of Rutland and of the West Riding; which confers a multiple amount of representation on the owner of many freeholds in different counties; which enables one man to hold many diverse franchises, and to give many distinct votes at elections. It is the one principle, which pervades the whole of the British constitution, to prevent, by the most varied and complex expedients, political affairs from being regulated by the decision of the numerical majority. Whether under the form of several votes allotted to one person, or superior efficacy granted to a single vote over the votes of many others, the object aimed at is always the same:—to guard against the prevalence of the passions, the impulses, the political ignorance, and the personal dependence of the multitude. This is what the British constitution effects, and this and no other result Sturges Bourne's plurality of votes is intended to accomplish.

Other means have been proposed for effecting the same purpose,—division of boroughs into wards, according to property; restriction of electors to one single vote; the cumulative vote, or right to give as many votes for one candidate as there are members for the borough, and other arrangements;—but, taken singly, I hold plurality of votes, graduated according to the amount of property rated to the poor, to be much superior to any other, and for this decisive reason. It meets directly and fully the difficulty of the problem. That difficulty consists in the numbers of the lower classes, and plurality of votes directly countervails the excess of those numbers. It gives more votes to a richer man, not because he is richer, nor because he is more educated or more intelligent, nor because he is more fitted to exercise the franchise, but because the poorer classes are more numerous, and have no right, in reason or equality, on that ground solely to possess the whole political power of the State. Sturges Bourne's method provides a specific remedy against this unfairness; it secures the equal representation of every class by providing against the unjust, and I may say accidental, supremacy of any single one. It would give five or six more votes to the upper electors, because they belong to classes containing, at the highest estimate, five or six times fewer voters than the lowest class. These last have no right to complain, for they are deprived of nothing which they are entitled to; indeed, it is impossible that they can make good any claim to all the political power in England, because they have hitherto had none, or because, man for man, they can produce many more electors.

Plurality of votes redresses an inequality, and averts an injustice. With such a security for equal representation, I would willingly accept household suffrage, and a permanent settlement of Reform would, I trust, be effected. The State would rest on a broader foundation; the irritation and injustice of exclusion would be done away with. And it would be no slight gain that industry and thrift would be stimulated by the reward of an additional vote at each step of the upward progress on to the maximum of six votes, or whatever number be selected.—I remain, Sir, your obedient servant,

Athenæum Club, May 2, 1860. BONAMY PRICE.

ANSWERS TO INQUIRIES ON THE NEW STAMP ACT.

WE have received the following letters relative to the New Stamp Act:—

SIR,—Would you favour me with your opinion on the following question:—Receipts for money lodged with bankers on deposit have been and still are exempt from stamp duty. Can the bank when paying such receipts have a legal discharge *without a stamp being affixed*, or will the name of the depositor on the back of the note be sufficient?—I am, yours, faithfully,

April, 1860. A COUNTRY BANKER.

The exemption from duty applies only to receipts *given* by a banker *to* his customer; there is no exemption whatever for receipts *taken* by a banker from his customer. No legal discharge in writing can therefore be obtained by the banker without a penny stamp; and any writing to that effect, whether on the back of the original note or elsewhere, requires a penny stamp. We should recommend all bankers to take a stamped cheque for all payments of this kind, whether of the whole sum mentioned in the deposit note or of a part of it only.

We have also received the following;—

SIR,—The New Stamp Act, which came into force on the 3rd instant, requires that a stamp of 3d should be affixed to "*dock warrants*," but it does not state—and there seems to be a great diversity of opinion on the point—whether or not this also applies to such warrants as were issued *before the 3rd instant*. It can clearly not have been the intention of the House of Commons to make a law of a retrogressive character. And, again, who would have, in such a case, to *pay* for the stamp on warrants for goods sold before the 3rd of April with a prompt becoming due after that date, the warrants being taken up by the buyer at the expiration of the prompt, both buyer and seller having acted without calculating any expense for "stamps and warrants"?

The favour of your opinion on the subject would greatly oblige, Sir, your old subscriber, A. B.

April 16, 1860.

Dock warrants issued before the 3rd of April are not liable to the 3d stamp.

THE BRADFORD CHAMBER OF COMMERCE ON THE FRENCH TREATY.

THE following is the reply given by the Bradford Chamber of Commerce to the questions put by the Board of Trade concerning the French treaty:—

The attempt at the classification of articles with a view to the assessment of specific duties by weight, and the average prices with reference to such classification, have presented so great a difficulty, if not an utter impossibility, that the Council believe that no classification of worsted goods can be devised in such a manner as to carry out article 1 of the treaty, which provides "that duties in no case shall exceed 30 per cent. *ad valorem*, the two additional decimes included." The Council have consulted the tariffs of all the principal nations with which the merchants of this district have commercial transactions with the view of ascertaining whether any means have ever been discovered to classify worsted goods in such a manner as to approximate a specific to an *ad valorem* duty, but they find that this problem has never been solved; and, though the methods employed have been more or less complicate, the results have invariably been the same, viz., that all goods fit for the labouring classes are virtually prohibited by the States which have adopted the principle of specific duties, and that the superior qualities only worn by the richer classes have been unduly favoured. If the simpler method of levying specific duties, as adopted by some States, has this injurious effect, the more elaborate plans of others have the same result, with the additional disadvantage that they are a fruitful source of vexatious difficulties in the interpretation of the tariff, and they open a wide field for the dishonest and destroy the trade of the conscientious importer. In no other trade are the fluctuations of the market more conspicuous than in the worsted trade. A fixed duty would, therefore, be exceedingly unfair in its operation, and even if it were possible to establish an average price, the taking the prices of the last six months as the basis of taxation would be most unjust, as from exceptional causes the prices have ruled much higher during that period than they have done for twenty years previously. As a proof of the impossibility of reducing a specific duty to the standard of an *ad valorem* one, the Council refer to the only article which has not changed its character, width, length, or tissue, and which is technically called "lastings." A certain quality which in 1848 was worth 28s, rose in 1851 to 44s 6d; in 1852 it fell to 35s, and in 1855 to 33s, and now, in 1860, the price is 45s. A duty of 30 per cent. calculated upon 45s gives 13s 6d per piece. If, therefore, this were to be taken as a fixed duty for the future the same would amount to 41 per cent. as soon as the price of lastings shall fall again to 33s, and to nearly 50 per cent. in case the article should be reduced to 28s, and the Council see no reason to suppose that similar fluctuations may not occur again. Another example may be adduced to prove the injurious effects of a specific duty. The Prussian tariff (afterwards extended to the Zollverein) was originally intended as a duty of 15 per cent. only, but owing to the gradual reduction of cost in the manufacture, by improvements in the machinery and other causes, the actual duty has been raised to 20 and even 100 per cent., so as in many cases to be a virtual prohibition. A specific duty in France would act in a similar manner, but owing to the present high value of goods the operation of it would be still more prejudicial. The Council therefore submit that they are warranted in asserting that it is quite impossible to devise any scale of specific duties in such a manner as to secure the introduction of worsted goods into France at anything like an approach to the per centage fixed by the treaty; and the Council are preparing detailed statements to prove that the nature of the goods defies any such attempt, as neither weight nor fineness gives a standard of value to the endless variety of textures and of mixtures of materials which produce the class of goods known as worsted

goods. Therefore, the Council venture respectfully to recommend that worsted goods and yarns be withdrawn from the operation of fixed duties. In answer to the third question, the Council believe that a duty of 30 per cent. *ad valorum* upon worsted yarns would be equivalent to a prohibition, because in this article the price of the raw material forms a much larger proportion of the cost than in woven fabrics. Thus, upon yarns of the present value of 13s the gross, the raw material costs 11s 3d, and the labour and interest upon capital is only 1s 9d. The Council are therefore of opinion that the duty upon worsted yarns should be reduced very much below 30 per cent. *ad valorem*, and the paper which they are engaged in preparing will prove that also as regards this article no *ad valorem* rate can be taken as a basis upon which to assess specific duties."

INDIAN INCOME TAX.

The following correspondence has passed between the Bank of England and the Inland Revenue Commissioners, on the mode in which income tax has been deducted from the last dividend on the India Four per Cent. Debentures:—

Bank of England, April 16, 1860.

Gentlemen,—The Council of India, acting under the advice of the Board of Inland Revenue, have deducted income tax at the rate of 10d in the pound from the dividend on East India Four per Cent. Debentures which became due on the 8th inst., and certain holders of these securities who bank with the Bank of England have questioned the correctness of this charge.

The securities in question were issued in August, 1858, by the East India Company, and are analogous in character to the ordinary India Bonds. The interest is payable on the 8th of April and the 8th of October.

On the assumption that the tax will cease finally on the 5th of April, 1861, it is considered that the rates charged and chargeable up to that date should stand as follows:—

On interest accrued from	August	to October, 1858	5d.
—	—	October, 1858, to April, 1859	5d.
—	—	April, 1859, to October, 1859	13d.
—	—	October, 1859, to April, 1860	5d.
—	—	April, 1860, to October, 1860	10d.
—	—	October, 1860, to April, 1861	10d.
			48d.

Whereas, in carrying out the course prescribed to the Council of India the assessments will stand thus:—

On interest accrued from	August	to October, 1858	5d.
—	—	October, 1858, to April, 1859	5d.
—	—	April, 1859, to October, 1859	13d.
—	—	October, 1859, to April, 1860	10d.
—	—	April, 1860, to October, 1860	10d.
—	—	October, 1860, to April, 1861	*nil*
			43d.

It is contended that the three assessments made up to October last were in respect of interest *accrued*, the first payment having been made on the fractional dividend for the period between August and October, 1858; and that the charge under consideration is in respect of interest *to accrue*, as two days only of the current financial year had passed when the additional rate was levied. If the rate of 10 l is to be considered as charged on the interest accrued from October last to April the said interest has been assessed twice over, for the 13d deducted in October included the additional rate of 4d on this very dividend, which will thus have contributed 1s 2d in the pound.

It would appear, therefore, that if the income tax were to be abolished at the expiration of the present year, the revenue would lose 5d in the pound on a half-year's dividend (leaving out of view the two days' interest); but, on the other hand, the holders, looking to the probability of its continuance at a high rate during the currency of the debentures, consider that, by future taxation, they will be mulcted of the difference between 5d and such higher rate.

I have therefore to request that you will be good enough to state, for the satisfaction of our customers, what is the law of the case, and under what clause of the Act the contested decision has been arrived at.—I am, gentlemen, your most obedient servant, W. Miller, Deputy-Cashier.

The Commissioners for Special Purposes, Inland Revenue, Somerset House.

Inland Revenue, Somerset House, London, W.C., April 25.

Sir,—The Board of Inland Revenue have had before them your letter of the 16th inst., addressed to the Special Commissioners of the income tax, in reference to the deduction made for that duty from the dividend on East India Four per Cent. Debentures, which became due on the 8th inst., and I am directed in reply to state that the dividends of the East India Debentures fall within the rates of charge under schedule C of the Income Tax Act, and that according to such rates the whole of the dividend which became due on the 8th inst. is liable to assessment for the year commencing April 6, 1860, at the rate made payable for that year, by the Act 23d Victoria, cap. 14,—viz., 10d in the pound,—in the same manner as the dividend in respect of the Three per Cent. Consols will be chargeable for the whole of the half-year from the 5th of January last to the 5th of July next.

The deduction, therefore, which has been made at the East India House, at that rate on the dividend now in question, is correct.—I am, Sir, your obedient servant, T. Sargent.

William Miller, Esq., Deputy Cashier, Bank of England.

Another income tax question, which is exciting some attention, consists in the determination of the Government to charge income tax on the dividends on the rupee securities, which are already subjected to an income tax in India. Subjoined is further correspondence:—

Inland Revenue, Somerset House, London, W.C., April 7, 1860.

Sir,—The Board of Inland Revenue having had before them your letter of the 16th ult., in regard to the deduction made at the India House for income tax, on interest paid to you by a bill drawn on the Governor-General of India, for the period from the 31st of August, 1859, to the 28th of February last, on an East India Government promissory note, I am directed in reply to state that, in the opinion of the Board, the payment of the interest by a bill in the manner mentioned is subjected to the tax.

Whether, however, the deduction has been made at the right rate is a matter on which you should communicate with the proper officer at the East India House, who will no doubt communicate with this Board in regard to your objection in this respect. I return the bill.—I am, Sir, your obedient servant, T. Sargent.

John J. Stone, Esq., 16 George street, E.C.

Agriculture.

GAME PRESERVATION.

A slight, but somewhat favourable indication that public opinion against game-preserving is operating in the rural districts is to be found in the address of Mr Benyon, at Abingdon, on being elected without opposition as a member for the county of Berks. He said "that certain reports had been very industriously circulated with reference to game on his property. He was not present at the market tables where these reports were so rife, and he was utterly unconscious of their existence; therefore he had no opportunity of replying to them. All he asked was fair play; that they would not condemn him unheard." And then he volunteered an explanation on the subject. He said "a general accusation of that nature could only be met by a general reply; but this he would say, he was as great an enemy to *rabbits* (!) as any one of them. His orders were strict on that point; and, moreover, all his tenants were expressly bound by their agreements to kill the rabbits upon their respective farms for themselves, and to render him every assistance in keeping down those pests of agriculture."

This is really no explanation of a charge of game-preserving. The very superfluous anxiety stated to be felt about the destruction of rabbits proves that Mr Benyon's estate is infested with game and gamekeepers; and it is probable that, in spite of the "strict orders," the gamekeepers find it highly conducive to their own profit to keep up "a fair stock" of rabbits as well as a "good head of game" If the tenants had complete control of their farms, as under any rational system of management they would have, Mr Benyon might safely leave the destruction of rabbits to the farmers without stipulations on the subject. But if game and gamekeepers have the run of their farms, as is probably the case, the destruction of the rabbits becomes well nigh impossible. We should like to see the county electors deal somewhat more decisively with these game-preserving candidates.

HORSE-BREEDING IN FRANCE.

Amongst the illustrations constantly occurring of the advance of sound economical views in France, may be mentioned a recent pamphlet by Baron de Pierres, entitled "L'Administration des Haras et l'Industrie Privée," wherein he shows with much force the erroneous principle on which the Government haras, or horse-breeding establishments, are founded, and the propriety of leaving the supply of horses to be provided for by private enterprise. With the exception of a few military officers, who, amidst the wild military schemes which have unfortunately been so rife in this country of late, have advocated Government breeding studs, no one here will doubt the soundness and propriety of the Baron's views on this subject. But it may not be amiss to show our readers some of the details which demonstrate the utter failure in France of Government horse-breeding studs. And if such concerns could have succeeded anywhere under Government tutelage, it would probably have been in France, where the people have so long been in the habit of looking to the Government for the performance of numerous duties which we more justly consider to be foreign to its province, and where there is, no doubt, greater administrative ability amongst Government officials than is to be found in any other country. These things, however, only render the failure more conspicuous.

Government haras are no modern novelties in France. They existed under the old régime, and, having been abolished at the Revolution of 1789, were revived by the first Napoleon in 1806. This revival was occasioned by the desire to provide horses for war, the number of stallions at Government studs being fixed at from 1,470 to 1,825; but, in fact, the number kept during the first Empire never exceeded 1,109. The Government haras were continued after the restoration and down to the present time. In 1852 the Government studs contained 1,335 stallions, for which the sum of 62,256*l* was voted in the budget. The chief establishments are at Pin and Pompadour. The first contained six thorough-bred English brood mares, and the second 68 Arab and Anglo-Arab brood mares. From 1846 to 1851 the Pompadour stud cost 25,680*l*, and supplied 46 stallions, making the average cost of each 560*l*,

while in 1851 the average cost of each horse foal reared in that stud was 620*l*. The Baron states that quite as good or better might have been imported into France from Bagdad or from England at a total cost of 200*l*.

The report of a commission, appointed in 1852 to examine the subject, recommended the establishments at Pompadour and Pin to be abolished, and that prizes to the owners of stallions should be instituted. It seems that of 300,000 foals annually produced in France, only about one-tenth are due to the Government stallions. Baron de Pierres shows that the present system is a kind of Government monopoly, which is injurious to the improvement of the breed of horses in France, while the cost is excessive. He refers to the facts that in 1833, when the "Société d'Encouragement" was established, there were only 665 thorough-breds in France. From that time to 1852 the Administration interfered by training and running at public races the horses bred at the Government studs, and during that period the average annual increase of thorough-breds was 59. After 1852 the Government ceased to compete with private trainers, when the annual increase of thorough-breds was 244. In 1858 the total number in France was 3,259. The brood mares had increased from 559 in 1852 to 1,006 in 1858. It is estimated that the total number of horses in France is 3,000,000, including 12,000 thorough-breds, of which 10,700 are private property. The average importation for the 12 years preceding 1858 was 20,878. Then the importations fell, and the exportations increased from 5,151 to 7,090. It would, there can be no doubt, greatly promote improvement of horses in France to abandon the practice of keeping all the males entire.

Literature.

Conquest and Colonisation in North Africa; being the Substance of a Series of Letters from Algeria, published in the *Times*. By George Wingrove Cooke. W. Blackwood and Sons, London and Edinburgh. 1860.

The class of literary men known as "our own correspondents," whom the exigencies of the newspaper press have called into existence, exhibit a type of the genus author peculiar to the present time. They are distinguished by marked characteristics from others of their profession; and afford a powerful confirmation to Mr Darwin's theory of the origin of species by selection. Literature is generally a sedentary pursuit. "Our own correspondent," on the contrary, like a celebrated biblical personage, spends his time in "going to and fro upon the earth, and walking up and down upon it," and is perhaps alluded to in the prophecy that "many shall run to and fro, and knowledge shall be increased." While, according to the conventional notion, the literary man is what the American Indians call a "pale face," more remarkable for development of brain than for muscle, "our own correspondent" is generally a bronzed athletic personage, incapable of fatigue, prompt and adventurous, with a resource for every emergency, and an eye and ear as keen as a hunter of the woods. Between the home-staying contributor, getting up his subject with books of reference on every side, and "our own correspondent," with paper on knee, jotting down the incidents of a Crimean battle, or a march with Sir Colin Campbell, of which he partakes the perils and the fatigues, the contrast is complete. As in most cases, the habits of mind brought out by either career have their own peculiar advantages and disadvantages. Every gain has its drawback. "Our own correspondent," quick to see and facile at describing everything that lies on the surface, seldom sees very far beneath it. His information is not always accurate, nor his inferences just. Writing for those who must run as they read, and who insist on being entertained, he must at all hazards be lively and piquant. Topics, however essential, which do not admit of this treatment, are ignored, or passed lightly over. The things said are subordinated to a certain effective manner of saying them. "Our own correspondent" knows very well that for the majority of his readers, *la sauce vaut mieux que le poisson*, and in his literary cookery acts on that knowledge.

Mr Wingrove Cooke, who has more solid claims to public attention, is widely known as having been the *Times* correspondent in China in 1857-1858, and as having previously, for a short time, held a similar office on the staff of the same newspaper in the Crimea. The letters which form the substance of the volume before us were written during a private long vacation ramble last year in Algeria. In their present form, they partake less of the characteristics which have been hinted at, than belonged to them in their original shape. In preparing them for republication since his return to England, Mr Cooke has consulted French official documents, essays, and treatises, and brought together a body of very useful information, statistical and of other kinds, which formed no part of the letters as they appeared in the *Times*. Though still not free from traces of its newspaper origin, this volume may be cordially recommended to those who feel any interest in the progress of French "Conquest and Colonisation in North Africa."

There ought to be in England many persons who feel this interest. The position of the French in Algeria bears obvious resemblance, in some essential particulars, to that of the English in Hindostan; and the procedure of the two nations in their respective dependencies forms an instructive commentary on their genius and character. Recent events in Morocco give us a strong and immediate interest in all that takes place on the coast of the Mediterranean. It is utterly fruitless to conjecture what schemes the Emperor of the French meditates, or does not meditate, in his astute and impenetrable mind; but the power which holds Gibraltar, and intends to keep it, has an interest in everything that takes place on the African coast of the Mediteranean. But, as Mr Cooke remarks:—

We may mistake the motives or the intentions of men, but we can note with certainty which way the tide of events is flowing. Let who may hold the helm, Spain will, whenever she may happen to be lirely enough to be capable of sensation, feel that Gibraltar is a thorn in her flesh. Whether Bourbon, or Bonaparte, or Sans-Culotte rule in Paris, France will continue for some time longer to believe that it would be to her interest to pierce the Isthmus of Suez, close up the Straits of Gibraltar, make the Mediterranean a French lake, and render Marseilles the emporium of all commerce between Europe and the East.

This policy is still encouraged by French writers of eminence. It not only finds favour, as everything and every person in turn does, with the versatile M. Emile Girardin, but "even the able and enlightened writers of the "Revue des Deux Mondes" elaborately canvas the capabilities of the French ports in Algeria to support the French fleets in 'naval conflicts which must hereafter occur on the coast of Gibraltar.'" The Duke de Malakoff is known to have been in Madrid just before the commencement of the recent war between Spain and Morocco. According to "well-informed French writers," a plan of alliance between the two Mediterranean powers and of joint conquest was discussed with him. The interference of England to prohibit the permanent occupation of Tetuan and Tangier by the Spaniards, was scarcely less bitterly resented in France than it was South of the Pyrenees.

That France (says Mr Cooke) is looking anxiously to the present events in Morocco, sufficiently appears from the fact, that three editions of a large octavo volume, of no great liveliness, dealing entirely with this subject, have been sold in Paris. The suggestion of this writer is to take advantage of the devotion of the Mahommedans in order to unite, in one religious and commercial league, and under French protection, all those nations of the North of Africa which were heretofore connected with Egypt and Mecca. The French do not think this so wild a dream as we do. The nations of North Africa run—Morocco, Algeria, Tunis, Tripoli, Egypt. Morocco holds the gate of the Mediterranean, but has already been taught by victories on her Eastern frontier, and by bombardment of her Western ports, that the French army and navy are irresistible, and she is now being taught that an English alliance is not sufficient to protect even her Northern coasts from a Spanish invasion. Algeria is France, Tunis is almost French, Tripoli is not unconquerable. It is a work of time; it is a work whose immediate accomplishment is not for to-day, nor for the present generation; but it is not so apparently hopeless or distant as was that of British India a hundred years ago. What the Carthaginians have done, and the Romans have done, and the Vandals have done, and the Saracens have done, and the Turks have done, it is not very unreasonable in a Frenchman to hope that the French may do.

Morocco, conquered by Spain, would, of course, be virtually conquered for France. To these considerations, which Mr Cooke adduces, as pointing out "an object which the Mediterranean powers think desirable, and which, under favouring circumstances, might, if consistently facilitated, be some day accomplished," we may add the fact of the recent acquisition by the Emperor of the sea-coast and port of Nice on the Mediterranean, his command of the high roads into Italy, and his dominant influence in the North of that Peninsula. Our concern for the neutrality of Switzerland, and for the safety of Belgium and Rhenish Prussia, which we should be glad to see even more strongly manifested than it is at present, should not blind us to a danger more directly affecting ourselves.

We do not write in any alarmist spirit; distrust is not fear; but we do think that there are sufficient reasons for feeling more than a speculative interest in the state of French affairs in Algeria, and for a strong desire to be accurately informed with respect to them. Assuming that our readers share this curiosity, we will endeavour, chiefly with Mr Cooke's aid, to gratify it to such an extent as our limits will allow, referring them for further information to his very timely and instructive little volume itself.

During the early years of the reign of Louis Philippe, the project, first mooted, we believe by General Clausel, of forming an agricultural colony in Algeria was much discussed. It would have been well if the decision of the Guizot, Theirs, and Broglie cabinet, in 1833, to leave colonisation to be carried on by private companies, had been adhered to. The results of a quarter of a century of Government aid are not encouraging, if the promotion of commerce and agriculture is their real object. "In the balance sheet of Algeria since 1830," writes M. Jules Duval, in the "Revue des Deux Moudes," "the expenditure exceeds the receipt by a considerable amount." This annual loss Mr Cooke states at 2,400,000*l*. The Government "offers 60 acres of fruitful land to every husbandman who can show that he has 300 francs to expend upon it;" and a free passage is granted to the emigrants; yet of 91,000,000 acres set apart for cultivation, less than 100,000 are as yet appropriated; and emigrants arrive but slowly. The truth is that France is not a colonising country, and has none of the elements for becoming so. An increasing population, capital which cannot find investment, and labour which cannot find employment, are the motives to emigration and the conditions of successful colonisation. But

in France the population (which in proportion to the area of the country is little more than half that of England) is actually decreasing; the laws of inheritance, by which equal division of land among all the children of a family is secured, make almost every peasant a landed proprietor, and root him fast in the soil, on which he toils and starves, but which he still owns. Consequently the few Frenchmen who do emigrate to Algeria are of the wrong sort for an agricultural colony. They are chiefly artisans from the towns. The list of passengers from Marseilles on the 22nd of September shows only "four husbandmen to sixty-one persons who came to form part of the transitory urban population." The different nature of the patriotic feeling, in the French and English, accounts for the failure of the former as colonists. The love of the former, ardent as it is, for *la belle France* is chiefly attachment to the soil of their native land; that of the latter is more the spiritual attachment to the laws and institutions of their country. The Frenchman, therefore, cannot bear to be transplanted; the Englishman feels that he carries England with him, wherever he can take the rights and bear the allegiance of an English subject.

Mr Cooke devotes a separate chapter to the products of Algeria. They are chiefly cereals, the growth not of the European settlers, but of the Arabian population. After wheat and barley, the principle articles of export in Algeria appear to be tobacco, cotton, silk, olive oil, cattle, and minerals. The first of these articles, the cultivation of which has been greatly encouraged and the quality improved by Government patronage, seems likely to be still further grown and to find its way for purposes of adulteration into general commerce. The attempt to grow cotton and silk has not met with much success. With capital and water, Mr Cooke reports that olive mills *might* be worked with profit; and, with European instruction, the wool of the immense flocks of sheep pastured by the Arabians might be turned to good account. Although there is a Government department of mines in Algeria, "the only tangible result yet obtained has been to extract 3,112,506 kilos of argentiferous lead.....from one mine—that of Khef-oum-Theboul." Mr Cooke's report on the products of Algeria seems to resolve itself into this summary result,—that with capital and labour, which do not appear likely to be attracted thither, much might be done in Algeria, which, as matters stand, there is little reason to believe will ever be accomplished. As a commercial and agricultural colony, Algeria is a failure,—a source of direct and pure loss to the mother country. Whatever pretext it may be convenient to advance, it is not held with any commercial intent. It is as one of the *propugnacula imperii* that it is cherished, and the unproductive expenditure lavished upon it deemed justifiable. This view is confirmed by what Mr Cooke states as to the carelessness and inefficiency of the civil administration of the colony, compared with the attention paid to, and the perfection reached in, every detail that relates to military matters. We conclude with an extract bearing on this point:—

> When I am told by French shopkeepers that "there is no justice in this country;" when I hear of a series of murderous assaults committed by the same person, whose victims lie in the hospital while he remains at large; when I find in my own case that I am cheated, and am without redress; when I am told that in the great city of Constantine there are only twelve police agents, and about the same number of nightly robberies, I am justified, I think, in repeating what every decent Frenchman asserts in Algeria, and what even French writers echo in the periodical press.
>
> The French urban population is, from the conditions of its creation, the refuse of France, and requires a very strong police government to keep it in order. In the province of Algiers things are well managed in this respect; in the province of Constantine nothing can be worse.
>
> The deficiencies of the French civil service are especially seen in its treatment of the few colonists who come under its jurisdiction. An intelligent Frenchman, who reads Dickens, insisted that he must have drawn his picture of the Circumlocution-office from stories brought him from Algeria. The "*cultivateur*" who comes over on the deck of the steamer finds himself with perhaps three hundred francs in his pocket, and a wife and four children on his shoulders. The money is to build him a cottage upon his "*concession*," but, unless the bureaux of Algeria are grossly calumniated, it is usually spent in Algiers or Oran, while the colonist is dancing attendance upon official people. He is bandied from office to office, made to enter into all sorts of engagements as to how he shall cultivate his land, the exact number of trees he shall plant, the time within which he shall complete the *défrichement*, and the nature of *main d'œuvre* he shall employ. The necessary consequence is, that by the time his papers are all regular the man is utterly unable to take possession of his allotment, and either goes to work upon the roads, or sinks into the dissolute mass of urban population.
>
> When military roads are necessary for purely military purposes, they are, as I have already shown, admirably constructed; when they are required only for the development of the resources of the country, and fall under the management of the civil authorities, they can scarcely be said to exist, except in the neighbourhood of Algiers. The most important road in all Algeria is that from Philippeville to Constantine. Over all this the imports and exports of the province of Constantine must pass. Its state is most disgraceful. In many places it more resembles an open graveyard than a highway. The distance is about forty miles as the crow flies, and is about fifty by the road. The price of transport is four francs a cwt during the summer, and double that in the winter.

We should be doing injustice to Mr Cooke (or his publishers), if we did not state that his work, besides the solid information in which it abounds, contains also much pleasant narration and amusing incident. Both the serious student of the position of affairs on the Southern coast of the Mediterranean and the general reader will do well not to pass it by.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

The Legislative Body, after three days' discussion, has adopted by 242 votes to 4 (the French Parliament is always terribly unanimous) the bill presented some time ago by the Government for modifying the import duties on wool, cotton, and dyeing stuffs. The text of the bill was published in the ECONOMIST several weeks back, but it has been slightly modified so as to give greater protection to French shipping in imports made from what the French call "entrepots,"—that is places in Europe. The principal enactments now stand as follow:—

COTTON.

By French vessels from countries out of Europe, exempt.
By French vessels from "other places" (that is in Europe), 3f the 100 kilogs (2 cwts.)
By foreign vessels and by land, 5f the 100 kilogs.

WOOL.

By French vessels from European countries of the growth of those countries, exempt.
By French vessels from countries out of Europe, exempt.
By French vessels from "other places," 3f the 100 kilogs.
By foreign vessels from anywhere, 3f the 100 kilogs.
By land: of the growth of European countries, exempt.
By land: of other countries, 3f the 100 kilogs.

INDIGO.

By French vessels from India and other countries where gathered, exempt.
By ditto from other places, 25f the 100 kilogs.
By foreign vessels and by land from anywhere, 28f the 100 kilogs.

The report of the Committee of the Legislative Body on the bill in question, which was drawn up by a vehement Protectionist of Rouen, was very hostile to the present commercial policy of the Government, and especially to the treaty with England, which without right it thought fit to discuss. In the debate in the Chamber, this policy and this treaty were also angrily denounced. The debate extended to unusual length, and, though turning on matters on which it is not easy to say anything new, was not devoid of interest. Two points in it specially struck me: the first is the energy with which several speakers insisted on the necessity of protecting French shipping, and, a promise by M. Baroche, in the name of the Government, that the differential duties on ship-

ping shall not be modified until after the Chambers of Commerce of the great seaports shall have been consulted,—a promise which virtually confirms what I told you last week, that no early modification of those duties is likely to be attempted. The second point in the debate is an elaborate argument to the effect that though the Emperor had a constitutional right to conclude the treaty with England, yet that the Chamber has a constitutional right to examine and revise the specific duties which the treaty enacts shall be imposed in place of the *ad valorem* duties on English productions stipulated in it. The argument will not, of course, be attended to; but it shows the feeling with which the treaty is regarded by a large part of the Chamber.

The Legislative Body will soon have to deal with the bill for modifying the duties on sugar, coffee, cocoa, and tea. Some modifications have been introduced into this measure also; those on sugar being as follow:—

Sugar, not refined, and not assimilated to refined, the 100 kilogs (2 cwts):—

	f.
Native	25
By French vessels from French colonies	25
By ditto from places out of Europe	28
By ditto from entrepots	34
By foreign vessels	39

Refined, of native manufactories and colonies, 2f 50c the 100 kilogs more than preceding duties.

The Credit Mobilier shareholders held their annual meeting on Monday afternoon, and, as usual, the report presented by the directors has excited great interest. The dividend declared was, as had been expected, only 12f 50c per share, in addition to the interest of 5 per cent. per share, making 25f, paid at the beginning of the present year. The sum is certainly deplorably small; but in 1858 and 1857 there were no dividends at all. In 1856 the dividend (in addition to the 5 per cent. interest) was 90f; in 1855, 178f 70c; in 1854, 34f; and in 1853, 25f. Thus, then, it will be seen the Credit Mobilier is subject to striking fluctuations of good and ill fortune.

The report, after some general observations, and after stating that the company subscribed 50,000,000f in the last loan of 500,000,000f raised by the Government, enters into somewhat elaborate detail respecting the co-operation of the company in certain Spanish enterprises,—the North of Spain and the Cordova to Seville Railways, and the Spanish Credit Mobilier. These affairs, it appears, have not obtained the support which had been hoped for from the Spanish people; but, nevertheless, the intervention of the company in them is justified on the grounds that they are good in themselves, and that the company but follows the example set by English capitalists in supporting the Rouen Railway at a time at which that undertaking met with little favour in France. The Russian Railways, in which the Credit Mobilier is largely interested, are next noticed, and a favourable account is given of their situation and prospects; among other things, I see the commercial treaty between England and France is set down as likely to be advantageous to these lines by creating a larger demand for Russian raw materials. The Austrian, the Dauphiné (French), and the Southern (French) Railways; the Paris Omnibuses, the Paris Gas, and the Paris Real Property (Immobilière) Companies, in all which the Credit Mobilier is concerned, are successively referred to; nor is the Compagnie Maritime—one of its pet projects, which has hitherto been very unfortunate—forgotten; indeed, its situation is represented as quite *couleur de rose*. The report then gives the following as the "general situation of the company on the 31st Dec. last":—

LIABILITIES (PASSIF).

	f.	c.
Capital	60,000,000	0
Accounts current	57,415,940	0
Bills to pay, and various creditors	5,946,918	65
Reserve	2,000,000	0
Balance of account of profit and loss	4,703,961	71
Total	130,066,820	36

ASSETS (ACTIF).

Rentes and shares	75,281,563	56
Bonds	1,636,599	30
Bills to receive	8,046,564	36
"Continuations" (réports)	15,600,789	85
Advances to companies	16,839,385	66
House of the company and furniture	1,450,030	89
Cash in hand or at the Bank, and dividends to receive	11,211,881	74
Total	130,066,820	36

After comparing these items with those of preceding years, and after remarking *en passant* that the use of cheques which the Credit Mobilier inaugurated some time back is on the increase, the report proceeds to give details respecting the account of "profit and loss," on which it justly remarks "the interest of the shareholders is concentrated." It appears from what is said that the transactions in *rente* and shares yielded a profit last year of 810,858f 71c; interest and commission one of 2,783,963f 62c; and the deposit of securities, &c., one of 45,006f 16c. To these items, one of 1,540,172f 83c is added, as the balance of what is realisable of the "accumulated profits of 1857 and 1858" (they were 9,423,697f 52c), after deducting the "depreciation caused by the uncertainty of the situation in 1859 and the diminutions which prudence renders advisable on different accounts." (This evidently means that the said "accumulated profits" are represented by securities which have greatly declined in value.) A total profit for the year of 5,180,001f 32c is thus arrived at, and that sum is thus disposed of:—

	f	c
Expenses of management, &c.	476,039	61
Interest of 5 per cent. on 25f per share, paid in January last	3,000.000	0
10 per cent. to the directors	170,396	17
Dividend of 12f 50c per share	150,000	0
Balance to be carried over to next year	33,565	54
Total	5,180,001	32

The report concludes by expressing the conviction that the situation of affairs in general is about to improve, and that consequently that of the Credit Mobilier will improve with it: also by lamenting that the shares of the company give rise to wild speculation, by repudiating all responsibility therein, and by declaring that there are "few enterprises in which the element of labour, and that great foresight without which nothing is certain and durable, enter in so high a degree as they do in the Credit Mobilier." Such is an analysis of the last report presented to the shareholders of this remarkable institution;—your intelligent readers will draw their own conclusions from it.

Several railway companies have held their annual meetings within the last few days. In that of the Lyons and Mediterranean Company, the report read to the shareholders stated the receipts of 1859 to be 99,122,628f 50c, and the expenses, including 870,000f, set apart for a special purpose (the repair of the *materiel* and the line, which were much used by the excessive traffic of last year caused by the war in Italy), 38,699,528f 39c. There consequently remained a balance of 60,423,100f 11c, which was 12,356,718f 64c more than that of 1858. To this balance there had to be added 1,074,372f 51c for "the balance of the account of investment of funds," and 125,794f 16c for the company's share in the receipts of the railway round Paris *(chemin de fer de ceinture)*; the grand total was consequently 61,623,266f 78c. But from that total a deduction of 16,195,857f 24c had to be made, namely, 14,527,761f 25c for interest on loans, 1,292,752f 6c for sinking fund on loans, and 375,343f 93c for the stamp duty on the shares. There, therefore, remained 45,427,409f 54c; which, however, was further reduced to 44,064,587f 26c by a deduction of 3 per cent. for the reserve. That 44,064,587f 26c divided among the shareholders gives nearly 63f 50c for each share, and leaves a balance of nearly 60,000f to be carried over to next year. Of the 63f 50c, the sum of 20f per share was distributed in November, and the remainder is now being paid. The report, which is a very elaborate one, estimates that the execution of the branch lines which have been undertaken, and the supply of the rolling stock to them, will in the course of the present year absorb a sum of 60,000,000f.

The report read at the meeting of the shareholders of the Southern Railway, stated the total receipts from the working of the lines, and the canals annexed to them, to be 22,275,057f 80c; the expenses of working and other outgoings, 15,749,889f 22c; and the profits 6,525,168f 58c. This sum is sufficient to make the total revenue per share 27f; namely, 4,766,680f or 20f per share being set down as "interest," and 1,668,338f or 7f a share as "dividend:"—the rest being carried to the reserve fund, or remaining in hand. In the course of last year the whole of the original concession of the Southern line, 793 kilometres (495 miles), were brought into use. The new concessions comprise 824 kilometres (515 miles), of which 461 are to be constructed at the expense of the company, and 363 at that of the Government. Of the total, 361 kilometres are now in course of execution.

In the report of the Dauphiné Company, of which some mention was made in my last, the receipts of the lines worked were stated to be for 1859, 2,495,588f 99c, and the expenses, 1,903,940f 85c, leaving a balance of 591,648f 14c. But as the lines of this company are far from being complete the sum was not distributed, and in addition to it, and to the balance of resources previously created (4,821,431f), the raising of a loan of 12,000,000f was (as stated last week) authorised for continuing the works. By the way, in the report of this company there is a passage which shows how unreasonable and selfish is the clamour which the French paper-makers have got up against the projected removal of the prohibition to export rags. The passage is this:—"The paper mills of the department of the Isère are in full prosperity, *and the commercial treaty with England will augment their activity.*"

The report of the directors of the Northern Railway was very satisfactory. It announced a dividend of 65f 50c, and stated that one of at least equal amount may be counted on for the future; also that the reserve fund having attained the extreme limit of 3,000,000f will not require any further portion of the receipts to be taken for it. I shall have occasion to refer to this report more at length in a subsequent letter.

The new postal arrangements between Paris and London, which came into operation on the 1st, seem very unsatisfactory. Hitherto there has been two departures from Paris daily,—one of letters posted before 1 o'clock in the day time, the other for those posted up to 6 o'clock in the evening at the principal and the branch offices, and up to 7 at the railway station. The 1 o'clock departure is suppressed, and it is replaced by one which takes place between 6 and 7 in the morning, and for which letters must be posted over night. Now, it scarcely ever happens that business men have occasion to write after 7 o'clock at night; and, besides,

letters written after that hour will reach London so late the following evening that there will be no time to answer them, even if people are at their offices to receive them. The practical consequence of the arrangement therefore is, that the midday departure is done away with, and that no adequate substitute is given for it.

Another of those *scandales*, which are not infrequent here, has occurred:—A stock broker (*agent de change*), M. F——, has absconded, leaving a deficit of some 4,000,000f. But the greater part of the sum will be made up by the sale of his office, by the assets he has left behind him, and by the contributions of his family and colleagues. A curious circumstance has been brought to light—namely, that one of his partners was a female engaged in an occupation the very reverse of reputable. It is only in this immoral Paris that such a partnership could have existed.

The following are the weekly quotations of the Bourse: that of the Credit Mobilier will be specially noticed:—

	Thursday, April 26. f c	Thursday, May 3. f c
Threes	70 50	71 25

Subjoined is an account of the markets:—

Flour.—At *Paris*, yesterday, good was 58f to 59f; superior, 59f 50c to 60f; ordinary, 55f to 57f for the sack of 159 kilogs. The four marks were done at 57f 75c to 58f for May, 58f 75c to 59f for June.

Wheat, at *Paris*, was not active, and quotations were 34f to 36f the 120 kilogs, according to quality. Of the provincial markets, as many as 136 present a rise of from 10c to 1f 15c the hectolitre, only 2 a fall of 25c to 35c, and 11 remain unchanged.

Cotton.—Business at *Havre*, in the week ending Friday, was rather active, the sales having been 10,000 bales; but prices remain unchanged, low New Orleans being 99f the 50 kilogs; and very ordinary ditto, 106f. The arrivals of the week were 22,482 bales. This week the demand has been regular, and, yesterday, low New Orleans was 99f to 99f 50c.

Sugar.—At *Havre*, in the week ending Friday, the demand was regular and prices firm. The sales were 350 hogsheads French West India disposable, 62f 50c duty paid; 470 ditto for delivery, 63f; 360 "usine" for delivery, 62f 50c to 63f; 600 casks Havana, 37f 25c; also a lot of damaged Reunion. The arrivals were upwards of 1,600 hogsheads French West India. This week sales have not been numerous: Havana, 39f; French West India, 62f. At *Bordeaux*, last week, the sole sale was a small lot of French West India at 61f 50c to 62f; and one of "usine" ditto at 66f; Reunion was nominally 62f 50c to 63f 50c; Havana, 34f to 34f 50c. This week the demand has revived, nearly 2,500 bales Mauritius and Reunion having been sold. At *Nantes*, last week, in addition to the sales of Reunion and Mauritius, mentioned in last Economist, 740 sacks of the former sort went at 65f 50c. Havana was nominally 37f. This week a small lot of Reunion has been sold at 64f to 65f 50c; and some very large quantities of ditto "gros grain" at 64f to 69f.

Coffee.—At *Havre*, in the week ending Friday, business was active, and a rise took place in prices of certain descriptions. The sales were 2,900 sacks Hayti disposable at 79f 50c to 81f the 50 kilogs in bond for Jeremie, Jacmel, and Port-au-Prince; 1,500 sacks ditto for delivery, 80f to 81f; 1,800 sacks Cape and Gonaïves for delivery, 82f to 83f; 1,100 sacks Rio not washed disposable, 75f 50c to 78f; 2,150 sacks ditto for delivery, 74f 50c to 78f; 324 sacks Rio washed disposable, 82f to 85f; 102 Santos, 81f 50c; 2,000 sacks Ceylon triage for delivery, 128f to 138f duty paid. 1,000 sacks, 126f 50c. In addition to the above, there were some sales of damaged Hayti and Santos. The arrivals exceeded 4,500 sacks. This week, business has been animated: Hayti, 80f 50c to 81f; ditto Cape, 82f to 83c; Gonaïves, 84f; Malabar triage, 135f duty paid; Costa Rica, 131f. At *Bordeaux*, last week, the sales were insignificant, and prices unvaried. At *Nantes*, last week, nothing was done. At *Marseilles*, last week, the sales were only between 500 and 600 sacks, at 72f to 75f. The stock was 30,000 sacks, of which 20,000 arrived in the course of the last fortnight.

Wool.—At *Havre*, in the week ending Friday, business was not important. 15 bales Buenos Ayres unwashed went at 2f 40c the kilog in bond; a small quantity of Monte Video merinos unwashed at 3f 22½c. The public sale commenced in the preceding week, and of which mention was made in the last Economist, consisted altogether of 802 bales wool and 278 sheepskins, out of 1,753 of the former and 470 of the latter offered. This week a small lot of Buenos Ayres unwashed has been sold at 2f 35c to 2f 47½c in bond.

Tallow.—At *Havre*, last week, there were no sales, and the arrivals were only 45 casks from Buenos Ayres. This week nothing has been done. At *Paris*, yesterday, the quotation was 135f 75c the 100 kilogs, a rise of 1f on last week's quotations.

Indigo.—At *Havre*, in the week ending Friday, only 25 cases Bengal were sold,—5 of them at 10f 65c the half-kilogramme duty paid, the rest at prices kept secret. This week, 5 cases Bengal have been sold at prices kept secret. At *Bordeaux*, the sales this week have been very active, but the quotations are not given.

Hides.—Business at *Havre*, in the week ending Friday, was not active: 100 Monte Video salted went at 85f the 50 kilogs duty paid; 500 Buenos Ayres salted for delivery, 86f; 500 Buenos Ayres dry, coming from animals dead of disease, 146f 25c; 12,600 horse skins, chiefly for England, 13f to 14f 50c each, and 680 horse dry, 10f 50c each. The arrivals of the week were numerous. This week, Buenos Ayres dry have been sold at 160f; Rosario dry, 155f; Pernambuco dry salted, 107f 50c.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. was 103f the hectolitre; Montpellier of 86 deg., 135f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f; and beetroot, first quality, 110f.

Correspondence.

PAPER CURRENCY IN INDIA.

TO THE EDITOR OF THE ECONOMIST.

Sir,—I do not propose, in referring to the remarks on "India Paper Currency and the Act of 1844," communicated to you, and inserted in your last number, to discuss the general merits of the Act, but I wish to point out the error of the writer on a fundamental point. He writes: "The limit of 14 millions, up to which the Bank may issue notes uncovered by gold, was selected upon no scientific principles. It was the result of the pure accident that the Government owed this sum to the Bank."

In the first place, the debt of the Government to the Bank was not 14, but 11 millions, as it is now. Secondly, the fixed issue of notes was not limited by any reference to the Government debt, but by experience, which proved the improbability of the public, under any circumstances, requiring a less amount. This has been repeatedly explained before parliamentary committees.—I am, yours faithfully, P. C.

Athenæum Club, April 23, 1860.

COMMERCIAL AND MISCELLANEOUS NEWS.

Telegraphic despatches state that the despatch of troops from India to China has been suspended, owing to the prospect of an amicable settlement with the Celestials. At Calcutta discounts have been reduced 1 per cent. Melbourne advices to the 17th March state that trade was heavy. At Sydney, however, goods were in active request.

Some statistics just presented to the Board of Trade with reference to the position of the fishing interest state several facts of considerable importance. The fishing interest on the east coast, from London as far north as Scarborough, embraces 1,757 vessels, with a total tonnage of 75,533 tons, and employs 23,079 men, and an invested capital of about 1,302,000*l*. The export of cured and salted fish to foreign countries is large, but not so extensive as it might be in consequence of English fish being practically excluded—by duties in many cases more than double the value of the fish—from the French and Spanish markets. Taking 112 lbs weight as an illustration, the average value of fish on the east coast is:—Soles, 35s; turbot, 50s; cod, 30s; plaice, skate, and roker, 8s; fresh herrings, 12s; salted ditto, 10s; dried herrings, 16s; fresh haddocks, 12s; dried ditto, 20s; mackerel, 30s; pilchards, 12s. At present the duties imposed by France and Spain range from 150 to 230 per cent., while foreign fish enter British ports free of all duty.

Some interesting and valuable statistics relative to the colony of New Zealand have recently been embodied in a blue-book addressed to the Hon. E. W. Stafford, Colonial Secretary, by the Registrar-General, and bearing date Auckland, December 29, 1859. They included the results of a census, from which it appears that within the last seven years previous the population of New Zealand increased from 26,707 to 59,277, or at the rate of nearly 122 per cent.; while live stock increased from 299,115 to 1,727,997; the land under crop from 29,140 to 140,965 acres, and the land fenced from 30,470 to 235,488 acres. The statistics show a corresponding increase in the diffusion of general education; there has been an increase of more than 9 per cent. in the proportion of those who can read and write, and the day and Sunday schools have risen from 4,605 to 9,672. Meantime the total value of imports have increased during the previous five years from 597,827*l* to 1,141,273*l*, and the total value of exports from 303,282*l* to 458,023*l*. The increase in the export of wool is most striking, having risen from 66,000*l* to upwards of 254,000*l*. Gold, too, appears, we believe for the first time, in the list of New Zealand exports, the amount exported in 1857-8 having been no less than 92,886*l*

The commercial accounts from Japan reach to the 26th of February and are much more encouraging with regard to the prospect of the growth of a large export trade than could have been anticipated from the tone of most of the previous reports. An American merchant writes, after a residence of two months at the port of Kanagawa, that, although the import trade has been limited, the Japanese having at present few wants which are not supplied by themselves, the shipments of produce have been large, varied, and continuous, and promise steadily to increase. Indeed, it is asserted that, considering the short time that has elapsed since the treaties went into effect, the extent of transactions has been wonderful.

The *Peterhead Sentinel* of last week publishes the first reports from the seal fisheries. One vessel has arrived with 7,000 seals, which will make about 70 tons of oil, and the following is the general result of the vessels reported:—Peterhead, 52,300 seals; Fraserburgh, 7,000; Norwegian, 54,000; German, 13,000; Hanoverian, 85,000; Copenhagen, 7,500; Flensburg, 2,000; and Archangel, 6,000. One British vessel had been lost. Intelligence has also been received from the Newfoundland fisheries. Five vessels had arrived at St John's with 16,000 skins, and three vessels at Conception Bay with 7,600. This is considered but moderate for the first arrivals; the intelligence from Greenland is exceedingly satisfactory.

We have advices from Jamaica to the 9th ult. For ordinary coffee 42s to 43s had been obtained, and tiercing qualities had brought from 1s to 2s more. Sugar had declined in price since last report, consequent on its arriving more freely at market. The ruling prices had been 17s to 18s for good refining qualities, and lower rates for dark; very fair was scarce. A fair quantity of sugar had been made at Barbadoes. The total exports to date amounted to—sugar, 9,110 hhds, 702 tierces, 1,719 brls; molasses, 2,084 puns, 30 hhds, 32 brls; rum, 116 puns, 70 hhds.

COTTON.

NEW YORK, April 17.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with the closing prices, f.o.b., with freight in sterling at current exchange:—

	Sales.	Closing.	Middling.	Freights.	F.o.b.
New Orleans...April 16	28000	⅛c higher ...	11c ...	15-32d equal to	6.18d
Mobile 14	13000	unchanged ...	10⅝c ...	15-32d —	5.83d
Charleston 12	12000	⅛c higher ...	10⅞c ...	¼d —	6.03d
Savannah 12	6000	unchanged ...	10⅝c ...	¼d —	5.93d
New York 17	5000	— ...	Upl. 11c ...	3-16d —	5.94d
Total.....	64000 bales			Average	6d

There is now an excess in receipts of 759,000 bales over last year, when the crop reached 3,851,000, and of 1,545,000 bales over 1857-8 (crop 3,114,000 bales).

New York Market.—An improved feeling was manifested in this market at the close of our last report, but the private advices per Persia proved disappointing, and business has since been much restricted. Prices have, therefore, receded about ⅛c; but, beyond this, holders show little anxiety to realise, particularly for the higher grades. The week's sales reach about 5,000 bales, of which but a small proportion in transitu. Middling Upland on the spot is worth 11c, and the market closes dull.

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years:—

	Receipts.—Week's Receipts. bales	Since 1st Sept. bales	Exports for the Week.—To Great Britain. bales	To France. bales	To other For. Pts. bales
1859-60.....	52000	4129000	88000	11000	13000
1858-59.....	50000	3370000	98000	2000	12000
1857-58.....	66000	2584000	96000	19000	11000
1856-57.....	29000	2707000	46000	2000	14000
1855-56.....	69000	3067000	69000	12000	16000
1854-55.....	64000	2145000	29000	14000	6000

	Exports Since First September.—To Great Britain. bales	To France. bales	To other For. Pts. bales	Total. bales	Stock. bales
1859-60.....	2072000	507000	372000	2951000	819000
1858-59.....	1372000	348000	441000	2161000	707000
1857-58.....	1183000	297000	235000	1715000	690000
1856-57.....	1109000	332000	325000	1766000	441000
1855-56.....	1348000	387000	387000	2122000	587000
1854-55.....	1048000	286000	186000	1520000	359000

Thus the receipts show an increase of 759,000 over those of last year, and an increase of 1,545,000 over 1857-58, and the exports exhibit the following results:—

	To G. Britain.	To France.	To other F.P.	Total.	Stock
Compared with last year.....	Inc.700000	...Inc.159000	...Dec. 69000	...Inc. 790000	...Inc. 112000
Compared with 1857-8	Inc.889000	...Inc.210000	...Inc.137000	...Inc.1236000	...Inc. 129000

Southern Markets by Telegraph.—Business has been greatly restricted at the South by the recent dull advices from Liverpool and the difficulty of finding suitable lots. Prices for the clean and better grades have been maintained, as the demand has been chiefly for these, while mixed lots continue very irregular. The week's sales at New Orleans only reach 28,000 bales, and the market closes dull at 10⅞c to 11c for middling. At Mobile the sales have also been small—barely reaching 13,000 bales—and prices are unchanged. Middling 10⅝c. A moderate business has been done in the Atlantic markets, and for the high grades sellers have obtained a slight advantage. Freights to Liverpool have receded to 15-32d at New Orleans, and 7-16d to 15-32d at Mobile.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by J. C. Ollerenshaw, Esq., of Manchester.*

NEW YORK, April 20.—Cotton quiet and unchanged. Middling Uplands, 11¼. Sales to-day 700 bales.

LIVERPOOL MARKET.—MAY 4.

A very considerable business has been done in cotton this week; so free, however, is the supply, that the market has worn a dull and spiritless aspect, with little intermission. We see scarcely any alteration in prices in any quality of American cotton, but in all grades there is irregularity, and the buyer may meet with some little advantage. Egyptian are more saleable, but not improved in price. Brazil steady, at last week's rates. East India are without change. The sales to-day may reach 10,000 bales. The market is quiet, but steady. The reported export amounts to 11,380 bales, consisting of 3,810 American, and 7,570 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The commercial advices at hand, both from India and China, by the last mail, being considered rather more favourable, there has been a slightly improved demand for goods on Eastern account during the present week. In prices, however, no quotable change has taken place. Stocks still continue limited, and the manufacturers, who still complain of the high value of the raw material, are firm in their demands. The wool trade has been much less active, and, in some instances, lower rates have been submitted to. In the mining districts, the operations have been somewhat restricted.

MANCHESTER, May 3.—The tone of the market has fully supported that of last week. On Tuesday, a considerable business was done in water twist for China, and through the week the prices of most kinds of yarn have become slightly stiffer. T'cloths for Bombay and China have been in request, and some largish offers made at recent prices. 9-8 shirtings and printers having now come rather into stock, and makers having come down to some extent in price, transactions have occurred to a fair amount. In 40-inch shirtings a few sales have been made for Mexico or the west coast of South America. Calcutta accounts to the 9th ult. and Bombay to the 11th have caused no change, beyond inducing a few more inquiries for T'cloths and 45-inch shirtings.

HUDDERSFIELD.—There has been a considerable inquiry for light twists, checks, and mixtures of all kinds suitable for summer clothing, and the stocks of these goods in the market being light, the demand has exceeded the supply. Regular market goods in black doeskin mixtures of all kinds are selling slowly, and the stocks on hand are increasing both in the cloth halls and in the manufacturers' shops. The demand for Bedford and woollen cords continues without variation. Low goods and unions for the shipping trade have been in somewhat improved demand. Nothing has been doing in our local wool market.——LEEDS.—The woollen trade is in a very healthy and sound condition. Prices are without alteration. Flax spinners still complain of the high price of the raw material, but their operations are on a pretty extensive scale, the demand both for home and export purposes being at the present time considerably active.——BRADFORD.—The wool market is not quite in the same dull state we have had to notice for the past month. The general demand for yarns is far from active. Both the export and home houses are doing less. Prices are too high for purchases not required for absolute order. The piece market is very dull. Goods are not saleable at cost price, and many must suffer loss from their stocks in hand.——HALIFAX.—The state of the worsted trade is again rather flat, and a somewhat limited amount of business has been done in wools, as well as in yarns and piece goods.——ROCHDALE.—Wool—Some moderate transactions have been effected at rates slightly below those current. Flannel—For the autumn trade nothing is expected to be done of any magnitude for the next week or two, and manufacturers are by no means disposed to take large orders except at considerable advances.——LEICESTER.—There is considerable slackness in the demand for goods; but, as great confidence is felt that prices of yarns are safe, the manufacturers are continuing to employ their machinery.——BELFAST.—The demand for yarns is tolerably active at full quotations. Line warps are 1½d dearer. Stocks of linens are very moderate, and the sale for most kinds is steady.——DUNDEE.—Although the transactions have not increased to any extent, the quotations of most articles are firmly supported.——WOLVERHAMPTON.—We have no change to notice in the value of iron, for which the demand is steady. Trade is still marked by some indications of dulness; but has been improved considerably in the course of the week, the factors' orders having been larger, and the home trade generally presenting more symptoms of life. From the North of England the orders have been increasing for all descriptions of ironmongery goods, such as are in general use; and the manufactories are on tolerably full time, notwithstanding the prevalent reports that trade is slack.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, April 16.—Flour—The market was firm, while the sales were fair, with a steady demand from the home trade and for export, chiefly to the British provinces. The sales embraced about 6,000 bbls, closing within the following range of prices:—Superfine State, 5.32 dols to 5.37½ dols; extra State, 5.40 dols to 5.50 dols; superfine Western, 5.32 dols to 5.37½ dols; common to choice Western extra, 5.60 dols to 7 dols; extra Genesee, 6.70 dols to 7.50 dols; mixed to straight Southern, 6.20 dols to 6.35 dols; straight to good extra ditto, 6.40 dols to 7.60 dols; choice extra family and bakers, brands, 7.60 dols to 8 dols; rye flour, 3.40 dols to 4 dols; corn meal, 3.55 dols to 4 dols. Canadian

flour was firmly held, while sales were moderate, being confined to about 300 bbls at 5.60 dols to 7.60 dols for extra brands, Wheat was in the main firmly held, and in good demand for prime to choice milling lots. Common qualities, and especially of spring, were less buoyant. Corn was irregular, while the demand was fair, with sales of 25,000 bushels, including Western mixed at 73c to 73½c, soft white Southern at 74c, yellow Southern at 76c to 76½c, round yellow at 79c, and white Southern at 76c to 79½c.

New York, April 20.—State and Western flour drooping. Wheat dull, and nominally in favour of buyers.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Owing to the favourable change in the weather, the limited quantity of produce purchased here for consumption in Ireland, and the steady progress of the wheat plant in most parts of England, there has been much less activity in the demand for all kinds of wheat since we last wrote; indeed, it may be called heavy, at a decline in the quotations, compared with last week, of from 1s to 2s per quarter, and at which sales have been with difficulty effected. The pretty general impression now is that wheat has seen its highest point for the season. Some time since we gave it as our opinion that 60s would be about the top quotation for the best parcels. That price has been reached, and, now that there is a prospect of steady and continuous arrivals from the Baltic, and partly of produce purchased during the winter months by the town millers, it will not, we think, be maintained. Certainly, as we are now receiving some rather large parcels of flour from the Continent, there is every reason to suppose that we shall have heavy and dragging markets for some time—unless, indeed, some unforeseen circumstance should arise by which we may be deprived of our usual supplies.

There has been rather an active demand for the low and medium qualities of barley for the time of year, and, in some instances, prices have rather advanced. Malting parcels, however, have moved off slowly, at barely late rates, The season for producing malt is now nearly over; yet the malt trade has been devoid of animation, on former terms. Oats have supported previous currencies, and beans have advanced 1s per quarter. In the value of peas, very little change has taken place. The flour trade has ruled somewhat heavy, and the late advance in the quotations has been with difficulty supported.

The continental markets, almost generally, have continued firm for wheat, at the late improvement in the quotations. All descriptions of spring corn have sold freely, at extreme rates. In the United States, scarcely any business has been passing, either in wheat or flour on English account. Indian corn, however, has commanded more attention.

Both in Ireland and Scotland, wheat has sold at full currencies; but the demand for it has fallen off. In other kinds of produce, a steady business has been passing, on former terms.

Only a moderate supply of home-grown wheat was on offer here to-day, yet the demand for all kinds ruled heavy at fully 1s to 2s per quarter beneath last week's prices. In foreign wheat so little was doing that the currencies ruled nominal. Flour was rather cheaper; but the value of spring corn, except malting barley, was well supported.

Mr Ed. Rainford states that 20 vessels have arrived off coast laden with grain since the 25th ult., and that very little business has been passing in floating cargoes.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 2nd day of May, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,593,585	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,118,585
		Silver Bullion	...
	28,593,585		28,593,585

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,728,943
Rest	3,224,701	Other Securities	21,900,666
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	6,871,698	Notes	6,366,595
Other Deposits	13,433,233	Gold and Silver Coin	764,726
Seven Day and other Bills	678,208		
	38,760,840		38,760,840

Dated the 3rd May, 1860. W. MILLER, Depnty Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,905,288	Securities	31,551,609
Public Deposits	6,871,698	Coin and Bullion	14,883,311
Private Deposits	13,433,233		
	43,210,219		46,434,920

The balance of Assets above Liabilities being 3,224,701*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

AN INCREASE of Circulation of	£569,195
AN INCREASE of Public Deposits of	620,118
A DECREASE of Other Deposits of	169,645
No change in the amount of Government Securities.	
A DECREASE of Other Securities of	169,570
An INCREASE of Bullion of	196,191
AN INCREASE of Rest of	6,355
A DECREASE of Reserve of	395,644

This return is rather a remarkable one, owing to the large decrease again witnessed in the private deposits, which has caused a considerable addition to the circulation, and a decrease of 395,644*l* in the reserve. The Victoria Loan payment was made on Monday. The coin and bullion have increased.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,337,326	£ 20,531,600	£ 21,415,311	£ 23,040,445	£ 22,905,288
Public deposits	4,997,054	5,890,160	4,612,037	5,468,008	6,871,698

At the corresponding period of the year 1850, the Anglo-Greek quarrel was still unsettled. At Paris there were the usual reports of changes in the President's Cabinet, and of an impending *coup d'état*, the Assembly being very refractory. M. Eugene Sue, the Socialist candidate, had just been elected representative in the metropolis. The Austrian Government had decreed a forced loan in Lombardy. Here, speculation was dormant, and the rate of discount for the best bills did not exceed 2 per cent. in Lombard street.

In 1857, attention was chiefly directed to an investigation of the causes of the stringency in the money market. The Bank of England had it in contemplation to refuse to renew outstanding loans on Government stock, with a view to embarrass the operations of the Exchange dealers, who were engaged in supplying the Bank of France with gold from this side.

In 1858, the condition of the money market was precisely the reverse of that witnessed in the previous year. The discount business at the Bank of England had dwindled to a trifling amount, the rate in the open market having fallen to 2½ per cent. Consols were verging upon 98, notwithstanding the uncertainty as to the course of the debate in Parliament on the India Bill.

In 1859, the false alarm of a Franco-Russian alliance against England having been authoritatively contradicted from every quarter, the public were beginning to view with comparative calmness the outbreak of the Italian war. Nevertheless, great sensitiveness remained behind, and the rapidity with which the banks and other money-lenders were calling in their resources and throwing out stock deposited with them, exercised a most severe effect in the Stock Exchange. Sixty members of that establishment had been declared defaulters. Turkish stocks, which in the previous week fell 20 to 22 per cent., had experienced a fresh decline of 5 per cent. The English funds, however, after falling 5¼ per cent., had rallied to the extent of 1¼. The new Indian Debenture Loan stood at 3 per cent. discount. The Bank of England rate of discount had been raised from 3½ to 4½ per cent., making a rise of 2 per cent. within a fortnight. France had announced a 3 per Cent. Loan for a sum equal to 20,000,000*l* sterling, at the low price of 60½. At Vienna, the great house of Arnstein and Eskeles had stopped. There was a wild panic in every market for Austrian securities on the Continent.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 871,286*l*; in 1857, a deficiency of 8,919,579*l*; in 1858, a deficiency of 762,267*l*; and in 1859, a deficiency of 3,173,343*l*. In 1860, the deficiency is 8,467,433*l*.

The money market remains quiet. On Monday, the payment of 2,650,000*l* on the new Victoria Loan was completed without difficulty, having been abundantly provided for. A large mass of bills fell due yesterday and to-day (the 4th), but there was not the slightest pressure. The best paper, having from one to two months to run, is readily taken at 4¾ per cent., and, in exceptional instances, even at 4½. The business at the Discount Office at the Bank has, consequently, fallen off materially. Owing to the reduction in the rates in the open market, together with the influx of gold to the Bank, there is an expectation that the Bank rate of discount will soon be lowered to 4½. The changes shown in the above return, however, scarcely point in that direction.

Large arrivals of specie and bullion have taken place since the date of our last report, including 410,000*l* from Melbourne, 137,000*l* from the West Indies, and 27,000*l* from Brazil. Since we last wrote, 325,000*l* in newly imported gold is known to have been sold to the Bank. The proportion sent in since the date of the return given above is 136,000*l*, inclusive of 48,000*l* this day.

We remark as a favourable feature that, in consequence of the decline in the Indian exchanges, the demand for bar silver for exportation to India has slackened so far as to cause a reduction in the price to 61½d per ounce standard. This being a price at which buyers for the Continent can operate, the silver by the steamer La Plata was sold to-day for that quarter instead of for India.

The steamer Ripon has taken this day 219,679*l* in specie for the East, of which 3,841*l* is gold, and the rest silver. The particulars are as follow:—For Calcutta, 102,420*l*; Hong Kong, 62,673*l*; Shanghai, 49,195*l*; Madras, 3,841*l*; and Foo-choo-foo, 1,550*l*.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley:—

Gold.—The gold ex Copenhagen, 157,000*l*, mentioned in our last circular (April 26th) as having arrived, was delivered on the 30th instant, and we have now to report the following additional arrivals:—The Ocean Chief, from Melbourne, with 128,000*l*; the Lightning, from Melbourne, with 52,000*l*; the Lincolnshire, from Melbourne, with 87,000*l*; the Greyhound, from Melbourne, with 20,000*l*; the Monarch, from Melbourne, with 118,000*l*; and the La Plata, from the West Indies, with 66,000*l*. Of the above amount, 205,000*l*, per Lincolnshire and Monarch, has yet to come to hand; of the remainder, about 270,000*l* has been sent into the Bank of England, about 136,000*l* has been taken for the Continent, and the balance remains to be dealt with. It is not improbable, however, that more may yet be sent into the Bank, after having been refined, the demand for export having ceased to a great degree. The Ripon has taken 3,841*l* in sovereigns to Madras. From returns just received from the United States, we have ascertained that the amount of specie exported from New York and Boston to Europe, from 1st January to 10th April of the present year, were 925,685*l*; and for the corresponding period of last year, 1,991,604*l*; showing a decrease of rather more than one million sterling; but,

as the exchange was gradually rising, it was expected that specie shipments would soon be resumed.

Silver.—Bar silver remains flat. The La Plata brought about 71,000*l* in silver and dollars; the silver has not yet been sold, the demand for the Indian market being for the present very moderate. The Ripon has taken about 114,000*l* to Calcutta and China; and the Tasmanian has taken 6,409*l* to the West Indies. We quote prices as 5s 1⅛d per oz standard, with a quiet market.

Mexican dollars have been in very fair demand for the outgoing mail to China of the 4th instant, about 101,000*l* having been shipped; the price, which was 62½d per oz at the beginning of the week, declined to 62d per oz, at which rate the dollars brought by the La Plata, from the West Indies, were sold. The Bavaria brought 3,000*l* in dollars from New York. We quote the price as 62d per oz, with little doing for the present.

Exchange on India is rather weak. On Bombay and Calcutta, at 60 days' sight, for Bank drafts, 2s to 2s 0¼d. Madras, 2s. Bills with documents, 1s 11½d.

India Government Loan notes have been adversely affected by the question of the double (Indian and English) income tax, and for the last few days sales could not be made to any extent at 103 to 103¼. This day, however, there has been a better market, owing to telegrams from Bombay, naming a rise of about 2 per cent., viz., from 103½ to 105½ for 5½ per Cents, and to 99¼ for 5 per Cents. Claims for return of the English income tax have been admitted on behalf of holders resident in India; and it may, therefore, be supposed that claims for return of the Indian tax will be admitted on behalf of holders resident in this country. It is to be hoped the authorities will come to some early and simple settlement of the question, or these securities must suffer from such uncertainties as that now hanging over them. We quote prices this evening, 104 to 104½ for 5½ per Cents.; 98½ for 5 per Cents.

The Continental exchanges are rather dull, but the rates are not essentially different from those of last Friday.

Messrs Johnson, Gilman, and Co., wholesale boot and shoe manufacturers, whose premises in Redcross street, Cripplegate, were recently destroyed by fire, are unable to meet their engagements. The liabilities are understood to be considerable.

Mr Reuter's telegram, dated Melbourne, March 17, states that trade was depressed, and that several houses had failed, including Messrs W. M. Bell and Co., Rae, Dickson and Co., Henriques Brothers, and Tickle.

The light portion of the mails from Australia and Bombay will be distributed in London on Saturday (to-morrow).

The "London and South African Bank" is announced, under highly respectable auspices, most of the leading merchants connected with the Cape being on the board. The colony has great resources, and has latterly made rapid commercial progress. There are at present six local banks at the Cape, the latest dividends of which vary from 13 to 22 per cent. per annum; and it is believed that more than one of these establishments will be glad to effect a fusion with the project now brought forward. One-fourth of the capital is judiciously reserved for the colony. There is no doubt whatever of the required capital, which is limited in the first instance to 400,000*l*, being subscribed. The advisability of an addition to the limited local banking accommodation has been strenuously urged in the advices received from the colony for some time past.

It is stated that another powerful marine insurance company is in course of formation, under influential auspices, with a considerable amount of capital. Special support has been secured in the Manchester and other manufacturing districts and in Liverpool.

The Grand Trunk Railway Company of Canada are offering, through Messrs James Capel and Co., 6 per Cent. Second Preference Debentures to the amount of 1,111,500*l*. The *minimum* price required is 80 per cent. The list is to be closed on Wednesday next.

The shares of the Union Bank of London have not recovered from the fall of 5*l* per share which took place last week. The quotation this afternoon was the same as that on Friday last, viz., 24¾ to 25¼. No new circumstances of importance have transpired with regard to the frauds. The Directors of the Union Bank have been engaged in endeavouring to trace the manner in which the vast sum of 263,000*l*, of which the bank has been defrauded, has been dissipated. It is understood that only a moderate portion of the amount has yet been traced to have passed through the Stock Exchange. The prisoners, William George Pullinger and Edward John Lyttleton, were examined at the Mansion House this day, when the latter was discharged, the evidence tending to show that he had been used as a mere blind instrument by Pullinger. The case against the latter was further proved.

At the general meeting of shareholders in the South Austrian and Lombardo-Venetian Railway Company, held at Vienna on Monday, a call of 2*l* per share, payable the 15th May, was authorised, subject to a deduction of 18s per share for interest and dividend, thus leaving 1*l* 2s to be paid.

The Stock Exchange Committee have appointed Monday next a special settling day in the shares of the London and Provincial Marine Insurance Company, which are to be marked in the official list. The share certificates are now ready. The company will commence business on the 14th inst. Mr Irving F. Rougemont has been engaged as underwriter.

The anticipation that the new Victoria Loan would attract a large number of investments is in course of realisation. At one period of the week, the price experienced a fresh rise of 1 per cent., reaching 107½. To-day a relapse occurred to 106¾ to 107; this price is ⅜ per cent. above that of last Friday. Other Colonial Government securities have also been in brisk demand for investment. The new Canadian 5 per Cent. Loan has risen fully 1 per cent., being last quoted to-day 1⅛ to 1⅜ premium. Generally, it may be remarked, the public have evinced a decidedly increased appetite for good securities during the present week. Various kinds of foreign bonds have shared in the improvement.

At Paris, to-day (Friday), the 3 per Cent. Rentes closed at 71.30 for money, and 71.35 for the account, showing, in the latter instance, a fresh advance of ⅛ per cent. since yesterday afternoon. Compared with last Friday's prices, there is a rise of nearly 1 per cent., which is attributable solely to the belief that the French Government have no present intention of giving the signal for any new agitation.

The English funds have also been favourably influenced by the absence of any fresh alarms from the Continent, by the rise on the Paris Bourse, and by the return of ease in the money market. A fresh improvement of ¼ per cent. has occurred, Consols closing this afternoon at 95¼, "buyers," both for money and next Wednesday's settlement, and 95½ to ⅝ for the 6th June. The advance would have been more decided, but for a number of realisations by persons who are exchanging into the new Victoria Loan and other securities. Owing to these sales, the rate for short loans on English Government securities is maintained at 4 per cent. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

British railway stocks have shown renewed and decided buoyancy, a stimulus having once more been given by the great increase in the traffic. This increase is the more remarkable from the circumstance that the returns published this week relate to an ordinary week in 1860, as compared, in most instances, with Easter week, 1859. It is known already that the dividends of the principal companies for the current six months will be considerably in excess of those for the corresponding period of 1859. We see it reported, upon competent authority, that the minimum dividend of

the Midland Company will be at the rate of 6¼ per cent. per annum, that of the Lancashire and Yorkshire 5½ per cent. per annum, and that of the London and North-Western 5 per cent. per annum. The rise established during the present week amounts to 2½ per cent. in Great Northern ordinary stock, 3½ per cent. in the A stock, 2 per cent. in London and North-Western, Oxford and Worcester, and Midland, 1 per cent. in Lancashire and Yorkshire, ¾ per cent. in Great Western, ½ per cent. in Eastern Counties, London and South-Western, Caledonian, Berwick and York and North Midland, and ¼ per cent. in South-Eastern. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.15 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 1-10th per cent. dearer in Paris than in London.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 108¼ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

Imports of the week ..... 113,999 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The wheat trade at Mark lane, to-day, was heavy, and prices ruled 1s to 2s per quarter lower than on this day sennight. Flour too, was rather lower to purchase; but the value of all other produce was well supported. The imports from abroad this week are liberal, viz., 11,840 quarters of wheat, 8,990 barley, 21,710 oats, and 1,000 sacks of flour.

At Liverpool, this morning, the corn trade was in a depressed state, and wheat declined fully 2d. Most of the continental markets were steady for wheat.

The business transacted in the Liverpool cotton market during the week has been on a rather less extensive scale than in the week previous; still the sales have been large, and amount to 73,500 bales, and include 57,500 bales to spinners, 4,500 to speculators, and 11,500 bales for export. Here and there a partial

advance of ¼d per lb may have been obtained upon some particularly scarce descriptions, but in the general quotations there is no change to note, the supply being so large as to meet readily every demand, and holders are willing sellers. The market to-day closes pretty steady. Sales 10,000 bales, without change in prices.

We have advices from New Orleans to the 20th ult. Our report says:—"Cotton is quiet. Sales to-day, 7,000 bales: middling, 10¾ to 11. Sales for the week, 44,500 bales. Receipts, 21,830 bales, against 20,710 bales last year. Exports for the week, 70,500 bales. Total exports to date, 1,830,000 bales. Receipts at this port ahead of last year, 458,500 bales; ditto at all Southern ports, 340,000 bales."

At Alexandria, on the 18th ult., according to a report forwarded by Messrs Briggs and Co., the supply of cotton was very limited, and holders generally were firm in their demands.

The transactions in the tea market have been only moderate; nevertheless, prices have continued steady. The show of samples has not increased.

Both raw and refined sugars have commanded more attention, and the quotations have been well supported.

Scarcely any change can be reported in the value of coffee; but the market, generally, may be considered in a healthy state.

The annexed returns are furnished by Messrs Trueman and Rouse:—

IMPORTS and STOCKS of SUGAR and COFFEE at the PRINCIPAL EUROPEAN PORTS, for the Three Months ending 31st March, 1859 and 1860.

* The stocks in Holland are in first hands only; in all other countries in first and second hands.

Letters from Pernambuco, by the present mail, state that inferior sugars were lower in price, although the total entries had been small, when compared with last year.

There has been only a limited inquiry for rice, and, in some instances, prices have ruled a shade lower, owing to the dull state of the wheat trade.

The Colonial wool sales have commenced. Although the attendance of both home and foreign buyers has been somewhat numerous, prices have had a drooping tendency. Port Philip qualities have given way 1d to 1½d; Sydney, 1d to 1½d; and greasy Adelaide, ½d per lb. The quantity now arrived for these sales is 69,000 bales.

Messrs Churchill and Sim have issued the annexed statement showing the stocks of timber in the public docks in London, on the 1st of May:—

	1860.	1859.	1858.
Foreign deals ..... pieces	1,014,000	908,000	1,093,000
— Battens and ends	620,000	401,000	369,000
— Fir timber ..... loads	36,500	19,500	46,000
Colonial pine deals and battens. pieces	403,000	557,000	810,000
— Spruce ditto	584,000	543,000	689,000
— Pine timber ..... loads	9,100	7,100	9,900
United States pitch pine timber	3,400	3,000	3,900
East Indian teaks	5,600	17,700	7,800

Messrs Grant, Hodgson, and Co. report a dull market for most kinds of tobacco, and furnish the following statistics for the past month:—Imports—906 hhds. Deliveries—1,121 hhds, against 842 hhds in the corresponding month of last year. Stock—17,326 hhds, against 11,942 hhds in 1859; 8,571 hhds in 1858; 10,204 hhds in 1857; 7,698 hhds in 1856; and 10,457 hhds in 1855.

In the value of hemp, flax, rum, and brandy, very little change has taken place.

Scotch pig iron has sold slowly at 53s cash. The stock of iron in yards is 146,500 tons, against which warrants are in circulation for 144,000 tons.

The following is the monthly report for Banca tin in Holland:—

	1860. slabs	1859. slabs	1858. slabs
Stock on warrants on March 31 ...	39685	29426	40278
Deliveries in April	6530	8350	6523
Stock on warrants, April 30	33155	21076	33755
Stock in the hands of the Trading Society for their annual sale ...	127850	120750	164847

The leather trade has continued very inactive. Messrs Powell and Co. state that there has been no great addition to the stocks, and that the various sources of consumption continue unimpaired.

We have no change of moment to report in the value of oils.

Tallow has met a very inactive demand, and P.Y.C., on the spot, has declined to 54s 6d to 55s per cwt. From a report issued by Messrs Schlusser and Co., of St Petersburg, and forwarded by Mr H Willis, it appears that the supply of Russian tallow for the season will amount to 138,000 casks. The future shipments of hemp are calculated at 27,000; of flax, 11,000, against 16,000 tons in 1859. The supply of oats is set down at 600,000 quarters.

IMPORTS OF FOREIGN AND COLONIAL WOOL.

COLONIAL and FOREIGN WOOL imported into London, Liverpool, and Hull, from Jan. 1 to March 31, 1859 and 1860, and the total imports, including Bristol, Leith, Grimsby, and Hartlepool.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The improved feeling which characterised this market at the close of last week has continued during the present one, and the public sales to yesterday, consisting principally of Mauritius, went off steadily, at full rates to 6d advance. There has been a marked increase upon the home deliveries, and arrivals keep very moderate. 220 casks Barbadoes by auction sold as follows: brown, 37s to 38s; low to good yellow, 39s to 44s. 60 casks 200 bags Demerara, 42s to 45s 6d for grainy. About 2,080 hhds West India had changed hands to yesterday (Thursday). The deliveries, last week, amounted to 4,520 tons, against 3,060 tons in 1859. There is now a diminution of only 930 tons for home consumption since the commencement of the year. 5,910 tons were landed last week, and the stock amounted to 56,310 tons, against 42,000 tons in the previous season.

Mauritius.—24,384 bags in the public sales were principally disposed of: grey and yellow, 39s to 42s 6d; grainy sorts, 40s to 45s 6d; crystallised, 43s to 45s; low to good strong brown, 32s to 38s 6d per cwt.

Bengal.—All good qualities are wanted.

Madras.—Some few parcels native have changed hands at 34s to 34s 9d per cwt.

Foreign.—By private contract, 1,500 bags low brown Siam have been sold at 31s 6d and 1,000 boxes Havana at 42s to 47s. A floating cargo of Havana, Nos. 11½ to 12, is reported for the United Kingdom at 28s 6d. 412 casks 325 barrels Porto Rico sold as follows: brown, 37s 6d to 39s 6d; grey and yellow, 40s to 45s 6d. 1,435 boxes Havana went at 35s 6d to 39s 6d for brown, and 40s to 46s 6d for grey to fine yellow.

Refined.—A firmer tone pervades the market, which is about 6d dearer

than on Friday last. Common dry goods cannot be obtained under 52s to 52s 6d, up to 55s for superior; crushed, 49s to 50s 6d; pieces, 42s to 48s per cwt.

Molasses.—No business of importance has been done.

Rum.—750 to 800 puncheons West India have sold: Demerara, 1s 11d to 2s 1d proof; Leewards, 1s 8d; and Jamaica at 3s 10d to 5s. 300 casks Mauritius, 1s 7d. A considerable portion comprises Berbice, of which no particulars transpired. The stock is 26,400 puns 6,390 hhds, against 22,420 puns 4,920 hhds last year. Deliveries keep steady.

Cocoa.—Late high prices have not been quite maintained for Trinidad, but there is a steady demand for common kinds at the partial decline recently established. By auction, 524 bags Trinidad found buyers as follows: grey, 74s to 78s; mixed greyish to superior bright red, 79s to 97s 6d per cwt.

Coffee.—The public sales, which have been of rather limited extent, passed off without alteration in value. 478 casks 452 bags native Ceylon were partly held above the value and bought in; the remainder sold at 60s to 61s for good ordinary quality. For 251 casks 127 barrels and bags plantation, prices ranged from 68s to 79s for fine fine ordinary to good. Some few transactions have occurred privately. 115 bales long berry Mocha were withdrawn at 130s, and 450 bales from Alexandria at 100s. 59 casks 635 barrels and bags Jamaica brought 60s 6d to 65s per cwt.

[The 35 casks 913 bags native Ceylon reported by us as sold at 62s 6d to 63s on the 17th February, should have read 59s to 63s per cwt.]

Tea.—A better demand has existed for some kinds, but especially the lower grades of congou. More general business has been done, still the market remains rather inactive.

Rice.—This article has been less active, probably owing to the downward tendency of the corn market. 2,729 bags Bengal about half sold at 12s to 12s 6d for good middling white: the remainder bought in at 12s 6d to 14s. 2,210 bags damaged Java were sold at 7s to 14s 6d for fine. Of 7,500 bags Necrancia Arracan, moderate transactions have taken place by private treaty, including some common old white Bengal at 10s cash. Good Rangoon and Bassein, 9s 4½d to 9s 6d; pinky Madras, 9s 6d per cwt cash.

Imports and Deliveries of Rice to April 28, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	9330	7930	39150	19600

Exported	7600	7600	6000	22900
Stock	52800	78300	85800	37400

Sago.—1,033 boxes were partly sold upon easier terms: small 17s to 18s; medium, 16s 6d; common to good bold 15s 6d to 17s per cwt.

Spices.—12 cases brown nutmegs realised 1s 6d to 1s 10d. 3 cases ordinary mace, 1s 1d to 1s 2d. Singapore pepper is steady, and 4d has been paid for good by private treaty. 1,350 bags, in public sale, realised 4d to 4½d for common to good. 967 bags Penang were taken in at 4d. 210 bags good half-heavy Malabar realised 5d to 5½d. 197 bags Singapore white partly sold at 6¾d. 35 bags pimento sold on rather easier terms, from 3⅝d to 3¾d per lb. 680 bags Bengal were bought in at 21s 6d to 22s; and 60 cases Cochin ginger at 80s for wormy. 228 barrels Jamaica realised 4*l* 6s to 8*l*. 98 boxes cassia lignea brought 91s to 94s per cwt for piles 1 and 2.

Saltpetre.—This market has been very dull during the week, and to effect sales holders must accept lower prices. A small parcel Bengal, refraction 7¾, is reported at 41s per cwt. Business has been done privately of which particulars do not transpire.

Imports and Deliveries of Saltpetre to April 28, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	3800	1230	3820	1500
Delivered	1490	1740	2850	2310
Stock	4460	3400	5160	3510

Deliveries last week 190 tons.

Cochineal.—No public sales were held yesterday (Thursday).

Lac Dye.—A parcel of B Mirzapore has been disposed of at 1s 8½d per lb.

Other Dyestuffs.—Cutch has been in demand at 1s advance, and 27s 6d to 28s 6d paid. 1,260 bags by auction were withdrawn at the latter price; subsequently some sold at 28s to 28s 6d. Gambier sells slowly at 16s 6d to 16s 9d. Safflower is more steady.

Shellac is again higher. Fine orange 10*l* 15s per cwt.

Drugs.—Nothing of general interest has transpired by private contract. Star aniseed was bought in at 100s per cwt. Aniseed oil has sold more readily at 8s to 8s 2d per lb.

Inoia Rubber is very firm at 2s 1d per lb.

Metals.—The market remains inactive, and quotations generally have been stationary. Scotch pig iron rose to 53s 6d in the early part of the week, but since receded to 53s. Stocks in the yards at Glasgow, 146,500 tons; warrants in circulation against this quantity, 144,000 tons. Other kinds are quiet. East India tin attracted partial inquiries at one period, and is now inactive: Banca, 136s to 137s; Straits, 129s to 130s. Spelter continues firm. Sales have been made at 20*l* 17s 6d to 21*l* per ton. The stock comprises 2,830 tons, against 3,710 tons in 1859 at same period. British copper has been steady. Lead and other metals have exhibited little variation.

Hemp.—990 bales Manilla offered by auction, yesterday, were taken in at 23*l* 5s for good common to roping sorts. A steady business has been done privately at 23*l* to 24*l*. The jute sales this week went off well, and 6,100 bales principally sold at very full prices: common to fine, 13*l* 15s to 21*l* 10s. Some of the better marks were dearer. An inquiry also prevails by private contract.

Oils.—Olive has been neglected. Gallipoli can be obtained at 61*l*; other kinds, 54*l* 10s to 58*l* 10s per tun. Fish oils remain quiet. The reported partial failure of the Greenland Seal Fishery appears to be confirmed. Palm is dull at 45s 6d to 46s for fine Lagos. Cocoa-nut meets with a good demand: Cochin, 45s; Ceylon, 43s. The market for linseed continues steady, and, notwithstanding the large production, there are buyers at 28s 3d and 28s 6d to 29s for forward deliveries. Rape oil meets a more ready sale, owing to the reported injury to the growing rape crops on the Continent: foreign refined, 42s; brown, 40s 6d per cwt.

Linseed.—There has been a good demand for home consumption and export: Bombay, 52s; Calcutta, 49s to 50s 6d. Considerable sales afloat have been made in both, at 51s 3d to 51s 6d for the former, and 48s to 49s 6d per quarter for the latter.

Turpentine.—650 barrels rough have sold at 9s 3d to 9s 6d. Spirits dull: American, 35s to 35s 6d; English, 34s 6d per cwt.

Tallow.—Quotations have further receded 1s 6d for foreign on the spot as well as for future delivery, and only moderate transactions have taken place during the week: 1st sort Petersburg Y.C., 54s to 54s 6d; delivery to the end of June, 53s to 53s 6d; and at 51s per cwt for October to December, business is reported to have been done.

Particulars of Tallow.—Monday, April 30.

POSTSCRIPT. Friday Evening.

Sugar.—The sales to-day have comprised 11,902 bags Mauritius, and 430 casks West India, which chiefly sold at full prices. The week's business in the latter amounts to 3,210 casks. A floating cargo of Pernambuco has sold at 21s 6d for a near port, and one of white Havana at 39s 6d per cwt for Russia.

Coffee.—The market continues firm.

Tea.—The sales to-day amounted to 11,324 packages, of which 4,660 found buyers. Fine congou went 1d dearer. Scented teas sold upon moderate terms. Other kinds were steady.

Rice.—A cargo of Russian has sold for Liverpool at 10s 6d per cwt.

Cochineal.—120 bags partly sold: Honduras silvers, 3s to 3s 6d; Teneriffe silvers and black, 3s 5d to 3s 10d per lb.

Tallow.—Town is reduced to 55s 9d per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been well supported this week, but no material alteration to note with respect to prices. Some few parcels of Dutch crushed have been sold here, f.o.b. in Holland—viz., V. O., A. S. R. No. 2, and B. & H. No. 1, from 32s to 32s 3d, all in barrels.

Green Fruit.—Market well supported. Oranges advanced in price. Some cargoes St Michael's and Valencia, sold by Keeling and Hunt, brought 2s to 3s per package higher. Lemons in demand, stock being light, and shipments being interrupted by political events in Sicily. More inquiry for nuts. Business done in Spanish. The high price of Para prevents sales. Barcelona without alteration.

Dry Fruit.—Currants of the lowest sorts continue to go off readily, but at rather easier rates, sales having been made at 28s to 29s, but a healthy demand appears to be setting in for good and fine fruit, for which advanced prices have already been offered and refused. London clearances duty paid in April, 1,200 tons. Raisins depressed, and being cleared off at much lower prices for home and abroad: Valencias, at 26s to 28s, out of condition, and reds at 29s to 30s. 600 tons duty paid in April. We require much larger deliveries to reduce our large stocks.

Colonial Wool.—The third series of public sales of colonial wool for this year commenced on Thursday. The attendance of buyers, both home and continental, was very large. The competition was spirited, particularly for export descriptions. The catalogue contained 1,409 bales Port Phillip, 890 bales Sydney, 261 bales Adelaide (in grease); total, 2,560 bales. For these, prices averaged 1d to 1½d less than at the close of last sales. The quantities arrived to date are:—Sydney, 11,215; Port Phillip, 32,426; Van Dieman's Land, 3,602; Adelaide, 12,844; Swan River, 767; Cape of Good Hope, 7,802; total, 68,656 bales.

Flax.—There is now no Russian in the market.

Hemp.—The market is quiet, and but little business done this week.

Cotton.—Sales of cotton wool from Friday, 27th April, to Thursday, 3d May, inclusive:—200 bales Surat at 2½d to 4½d for very ordinary to fair. The transactions by private contract, this week, have been confined to 200 bales Surat at fully previous rates. Yesterday, 1,240 bales Tinnivelly were offered at public sale, without reserve, and sold at 4½d to 4¾d for middling fair, and 4⅜d and 4⅝d for fair to fully fair, and a few lots at 5d per lb. There were also offered, at public sale, 296 bales Tinnivelly, which were sold at 4d to 4¼d for ordinary to middling fair; 200 fair Western, 100 sold at 3½d; and 186 Surat sold at 2¾d to 3¼d for very ordinary to very middling. The decline in Tinnivelly from previous rates is ⅛d to ¼d per lb, and Western has also declined ¼d per lb from the late nominal quotations. Surats brought previous rates.

Silk.—A little more doing in China silk, at prices about 1s to 1s 6d reduction from the highest point. In Bengal and other silks no alteration.

Tobacco.—Sales have been of a limited character, and almost confined to small selections for home trade. The market remains dull and neglected.

Leather and Hides.—At Leadenhall, this week, the same dull trade in leather which has been reported for many weeks past continued, and prices are unchanged. At the public sale of foreign raw goods, this week, the Cape hides sold readily at fully previous rates; the Australian at rather lower prices, but the qualities were not first-rate. Almost all the East India kips were sold, chiefly at about previous rates; some of the best descriptions were a shade lower than at the last sale. All other goods continue stationary.

Metals.—There is little change to note, the currency of metals being steady, with business still inactive. Copper is quiet in demand, and holders of foreign are evincing a willingness to yield somewhat in price in order to effect sales. Tin goes off steadily, but buyers operate cautiously, prices being high. Iron shows no revival, the demand being slack for all

descriptions. Lead is lower in price, which has stimulated a few buyers to operate. Spelter is reported somewhat better by the speculators, but no export business of consequence is going on. Tin plates keep steady in demand, without change in prices.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	55	9
Fat by ditto	2	11
Yellow Russian	56	0
Melted stuff	40	0
Rough ditto	23	6
Greaves	16	0
Good dregs	7	0

Imports this week 61 casks.

PROVISIONS.

Our bacon market denotes little or no change from last week; prime brands fetch 72s on board; there is very little in the market, and fresh arrivals change hands freely. With a continuation of the present genial weather, we may confidently look forward to an improvement in the bacon trade.

With a few warm showers, we shall have large arrivals of foreign butter, and a consequent diminution of prices, unless counteracted by the urgent wants of the Northern and Irish markets, which, on the other hand, may be in some measure controlled by the reasonable expectation of additional supplies from foreign markets, hitherto unknown here, following the abolition of duty.

METROPOLITAN CATTLE MARKET.

MONDAY, April 30.—The total imports of foreign stock into London last week amounted to 3,497 head. In the corresponding week in 1859 we received 2,876; in 1858, 1,362; in 1857, 1,456; in 1856, 742; in 1855, 1,266; and in 1854, 1,122 head.

The supply of home fed-beasts on offer this morning was seasonably good, both as to number and quality. For nearly all breeds the demand ruled inactive, and, in some instances, prices were rather lower than on Monday last. The extreme value of the best Scots was 4s 10d per 8lbs. Compared with this day se'nnight, the show of sheep was moderate, but quite equal to the demand, which ruled steady at full currencies. The best old Downs in the wool realised 5s 10d, out of the wool 5s per 8 lbs. We had a fair inquiry for lambs, the show of which was good, at full currencies, viz., from 5s 6d to 7s per 8lbs. Calves supported last week's prices; but the sale for them was by no means active.

SUPPLIES.

	May 3, 1858.	May 2, 1859.	April 30, 1860.
Beasts	3920	3920	4530
Sheep and Lambs	20840	21550	24250
Calves	145	93	115
Pigs	430	500	360

THURSDAY, May 3.—To-day's market was seasonably well supplied with beasts, amongst which were 160 oxen from Spain. All kinds met a dull inquiry, and Monday's currency was barely supported, the highest quotation for Scots being 4s 8d per 8lbs. We have to report a heavy demand for sheep, at, in most instances, a decline in value of 2d per 8 lbs. Lambs, the show of which was moderate, changed hands slowly, at from 5s 6d to 7s 4d per 8lbs. Prime small calves supported previous rates; but inferior veal was dull, and 2d per 8lbs lower in price.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	2	3	6	Prime Southdown sheep	5	6	5	10
Second quality ditto	3	8	4	0	Large coarse calves	4	6	5	0
Prime large oxen	4	2	4	4	Prime small ditto	5	2	5	6
Prime Scots, &c.	4	0	4	8	Large hogs	3	6	3	10
Coarse and inferior sheep	3	6	3	10	Small porkers	4	2	4	8
Second quality ditto	4	0	4	6	Suckling calves...each	18	0	22	0
Prime coarse-woolled do.	4	8	5	2	Quarter old store pigs	22	0	29	0

Lambs, 5s 6d to 7s 4d.

Total supply—Beasts, 1,100; sheep and lambs, 7,000; calves, 250; pigs, 342.
Foreign supply—Beasts, 222; sheep, 520 calves, 170.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, April 30.—During the past week the arrivals coastwise have been moderate, and the weather cold and unseasonable. Towards the end of the week a considerable rise took place. The following are this day's quotations:—York Regents, 120s to 180s; ditto Flukes, 120s to 150s; Lincolnshire Regents, 100s to 130s; Dunbar ditto, 120s to 140s; Perth, Forfar, and Fifeshire ditto, 110s to 130s; ditto reds, 100s to 120s; Irish whites, 90s to 100s per ton.

THURSDAY, May 3.—The arrivals of home produce have been limited at this market since our last report, and trade is brisk for good ware, and previous rates maintained. York Regents, from 160s to 180s; ditto, Flukes, 120s to 180s; Scotch ditto, 100s to 160s; ditto Cups, 110s to 130s; Dunbars, 120s to 140s; Rocks, 110s to 150s per ton.

HOP MARKET.

BOROUGH, Friday, May 4.—The show of hops is only moderate, yet the demand is inactive at previous rates. The bine is making steady progress.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 5*l* 0s; clover, 4*l* to 5*l* 17s 6d; and straw, 1*l* 7s to 1*l* 14s per load. Trade less active.

CUMBERLAND.—Meadow hay, 3*l* 3s to 5*l* 5s; clover, 4*l* 6s to 5*l* 17s; and straw, 1*l* 7s to 1*l* 15s per load. A moderate demand.

WHITECHAPEL.—Meadow hay, 3*l* 0s to 5*l* 0s; clover, 4*l* 0s to 6*l* 0s; and straw, 1*l* 7s to 1*l* 14s per load. Trade steady.

COAL MARKET.

WEDNESDAY, May 2.—Bell's Primrose 13s—Eyass's Bebside West Hartley 16s 3d—Davison's West Hartley 16s 3d—Hastings' Hartley 16s 3d—Holywell 16s—West Hartley 16s 3d—Wylam 16s. Wall's-end:—Acorn Close 19s 6d—Byron 20s—Eden 19s 6d—Riddell 18s 6d—Wharncliffe 18s 9d—Framwellgate 19s 6d—Hunwick 16s—South Durham 19s 6d—South Whitworth 16s. Carway and Duffryn Malting 23s. Ships at market, 36; sold, 22.

FRIDAY, May 4.—Wall's-end:—Braddyll's Hetton 19s 3d—South Hetton 20s—Eden 19s—Framwellgate 19s—Cassop 19s 3d—Heugh Hall 19s—Bell's Primrose 13s—South Durham 18s 3d—Tanfield Moor Butes 13s 6d—West Hartley 16s 3d—Davidson's Hartley 16s 3d—Grey's Hartley 15s 9d North Hollywell Main 16s—Acorn Close 19s. 64 ships at market.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 4.—There has not been much business done this week, which is not an unusual circumstance immediately after the close of public sales, when generally a short lull in the demand is experienced.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 4.—Grain market dull and declining. Wheat 2d cheaper, without buyers. Flour equally neglected. Indian corn and beans 1s lower. Oats, oatmeal, and barley also cheaper, and difficult to move.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 4.—There is a continuance of inactivity in the market for bar iron, but there is no change to note in prices. For the better descriptions of Staffordshire manufactured iron there exists a fair demand, while common iron is comparatively neglected. The market for Scotch pig iron has been flat throughout the week with a decline in price. Copper maintains its firmness. In lead little doing. Spelter has slightly improved.

The Gazette.

TUESDAY, May 1.

BANKRUPTCY ANNULLED.

J. Hewitt, jun., Halvergate, Norfolk, miller.

BANKRUPTS.

E. H. Spark, late of Heathcote street, Gray's inn road, jeweller.
R. D. Clegg and F. Angerstein, Friday street, Cheapside, and Fleet street, dealers in atmospheric clocks.
W. P. Goose, Downham Market, Norfolk, builder.
S. Gostling, Castle Acre, near Swaffham, butcher.
W. Cooper, Cheriton, near Alresford, builder.
J. E. Claridge, Hill Croome, Worcestershire, and Charleborough, Oxfordshire, drover.
W. H. Merrick, Halesowen, Worcestershire, innkeeper.
J. Dowell, Birmingham, licensed victualler.
T. Brookes, Birmingham, boot manufacturer.
H. Haywood, alias J. Haywood, Coventry, riband manufacturer.
J. Lancey, Barnstaple, linendraper.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending April 21 amounted to 498,730*l*, and for the corresponding week of last year to 463,190*l*, showing an increase of 35,540*l*. The gross receipts on the eight railways having their termini in the metropolis amounted to 213,964*l*, and for the corresponding week of last year to 202,664*l*, showing an increase of 11,300*l*.

PARIS AND MEDITERRANEAN.—The annual meeting of this company was held on Thursday at Paris. The expenditure on the old lines during the year, including 6,700,000f (268,000*l*) for rolling stock, was 24,375,837f (975,034*l*). The expenses to be incurred on the old lines in 1860 were estimated at 16,000,000f. On the new lines, the section from Moret to Montargis would be opened to the public about the 1st of July of the present year, and the whole line to Nevers in 1861. The receipts for the year ammounted to 99,122,628f (3,964,905*l*), and the expenses to 38,699,528f (1,547,981*l*), leaving a balance of 60,423,100f (2,416,924*l*). The proceeds from money invested amounting to 1,074,372f (42,975*l*), and the produce of the line round Paris, connecting the different lines, 125,794f (5,031*l*), gave a further sum of 1,200,166f (48,006*l*), making a total of 61,632,266f (2,464,930*l*).

MADRAS.—The directors of this company stated in their report that the progress made in the construction of the railway during the past half-year had been satisfactory. The total receipts for the past half-year amounted to 31.837*l*, and the working charges to 12,166*l*, or 38·21 per cent., against 21,760*l* and 8,750*l*, or 40·21 per cent. respectively for the half-year ending 31st of December, 1858, showing an increase of 10,678*l*, or 46¼ per cent. on the receipts, and of 3,416*l* in the expenses. The traffic receipts per mile had gradually risen from 30*l* per month at the first opening of the line, in 1856, to nearly 57*l* per month in the five last months of 1859, being an increase of 90 per cent. in three years.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, April 30.—The railway market showed firmness; the closing quotations of British stocks averaged ¼ per cent. higher than on Saturday. The completion of the fortnightly settlement, however, formed the chief business of the day. In colonial descriptions, Grand Trunk of Canada stock improved to 34 to ½; and Great Western shares to 13⅝. In the foreign market, Lombardo-Venetian, Paris and Lyons, and Northern of France were higher. Lombardo-Venetian left off 1⅛ to ¼ pm.; Great Luxembourg, 6¼ to 7; and Bahia and San Paulo, ½ to ⅝ dis. A renewed advance took place in the shares of the New York and Erie. Mines were in fair demand, and generally steady. In joint stock banks, Ottoman improved to 17⅞ to 18¼; and in miscellaneous descriptions there was a slight rise in Madras Irrigation. The new Victoria debentures continue in request, and, after marking 107⅞, closed at 106⅝ to 107⅛, or a quarter per cent. better than on Saturday.

WEDNESDAY, May 2.—The railway market was inactive, but closed at an improvement. Most of the leading British stocks left off ⅛ to ¼ per cent. higher than on Monday, Great Northern showing the principal rise. The most important feature in the colonial market was a general rise in Indian guaranteed; Great Western of Canada shares were also a fraction better, while Grand Trunk stock closed without change. In foreign descriptions there was a decline in Paris and Lyons and an advance in Victor Emmanuel obligations. Bahia and San Paulo closed ⅝ discount. American securities were firm, particularly the bonds and shares of the New York and Erie, sinking fund bonds and shares of the Michigan Central, and shares of the New York Central and Michigan Southern. New South Wales Government debentures were ¼ per cent. higher. Mines generally advanced. In miscellaneous descriptions, a decline took place in Australian Agricultural, and a rise in Madras Irrigation. The Canadian loan left off 1½ pm. scrip, and 100¾ bonds.

THURSDAY, May 3.—The increase in the traffic returns, especially favourable from contrasting with the Easter week last year, caused the railway market to open with increased buoyancy, and a further rise took place, which was fairly maintained to the close. In the foreign market there was a rise in Lombardo-Venetian, Northern of France, and Paris and Lyons. Victor Emmanuel obligations were likewise better. American railway securities continued steadily to improve; those of the New York Central and Illinois Central being to-day chiefly in demand. Canadian 6 per Cents. were higher. A further general rise took place in mines. Alfred Consols presented a reaction. Ottoman Bank shares were steady at 18 to ¼. In miscellaneous descriptions, Crystal Palace stock and Madras Irrigation shares advanced.

FRIDAY, May 4.—The railway share market to-day was rather quiet, but there were several variations in price. Great Northern A stock was dealt in as high as 120. Other descriptions showed firmness. Lombardo-Venetian Railway shares advanced to 2 to 2¼ prem. The Indian lines were firm. Some of the French shares were also inquired for.

CRYSTAL PALACE.—The Mendelssohn Festival, held yesterday, passed off with great *eclat*. The company was very numerous. The programme of arrangements for the present season shows that the directors are good caterers for the public taste.

The Economist's Railway and Mining Share List.

THE HIGHEST PRICES OF THE DAY ARE GIVEN.

FREDERICK DENT,
Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

SAUCES.—CONNOISEURS have Pronounced LEA and PERRINS' "WORCESTERSHIRE SAUCE" one of the best additions to Soup, Fish, Joints, and Game. The large and increasing demand has caused unprincipled traders to manufacture a spurious article; but the "GENUINE" all bear Lea and Perrins' name on Bottle, Label, and Stopper.
Sold by Crosse and Blackwell, London, and all respectable Oilmen and Grocers. Sole manufacturers—Lea and Perrins, Worcester.

S. W. SILVER AND CO., OUTFITTING WAREHOUSES, 66 and 64 CORNHILL, E.C.
Special Outfits for Australia, India, and China, for Naval and Military Officers, Cadets, Midshipmen, and Civilians. Clothing for Gentlemen's Home Use,—viz., Naval and Military Uniforms and Civilian Dress of the best Materials and Workmanship. Shirts, Hosiery, Gloves, &c. Ladies' Outfits. Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteaus, &c., portable and suited to all climates.
Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

THE HUMAN HAIR
Just published, price 1d, the 76th edition of
GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included
Grimstone's Eye-Snuff for exportation. Sold in Jars 3s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 22 Wellington street north, Strand, W.C.

A New Edition of
THE PHILOSOPHY OF MARRIAGE.
By JOSEPH KAHN,
Graduate in Medicine, Surgery, and Midwifery in the Royal and Imperial University of Vienna, Erlangen, &c., &c.
This popular work (which has been translated into four different languages) has now gone through forty-one editions of 10,000 each, and is designed to impart accurate knowledge on subjects which involve, the means of securing moral and physical happiness.
Price One Shilling, or, post free, for Twelve Stamps, direct from the Author, 17 Harley street, Cavendish square, London, W.

DR KAHN CONTINUES TO deliver Daily, at Three and Eight o'clock, his popular Lecture on the "Philosophy of Marriage," at his Anatomical Museum, top of the Haymarket.
The Museum is open (for gentlemen only) from Twelve to Five, and from Seven to Ten. Admission, One Shilling.
Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.
WHITE, MANUFACTURER, 228 Piccadilly, London

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.
St Paul's churchyard, London.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"G. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

HOLLOWAY'S OINTMENT AND PILLS.—Ulcerations of the lower limbs yield with surprising rapidity to this ointment. Abscesses and sores of this class, that had discharged virulent and offensive matter for many years, and kept the sufferers in constant pain and in a most debilitated condition, have been cured by it in a few weeks. This Ointment does not merely, and at once, suppress the discharge, which would be highly dangerous, but striking through the surface of the core of the disorder it obliterates both its source and its symptoms. These valuable pills, by their mild aperient action, purify the blood, diminish fever, and expedite the cure, which is always permanent and safe, because these remedies have expelled all unhealthy matter.

TEETH.—MR ESKELL, Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic), and Bennett's hill, Birmingham. Established 1847.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

Post free for Two Stamps.
EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.
GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL, administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.
Extensive experience, and the recorded testimony of numberless eminent medical practitioners prove that a half-pint of DR DEJONGH'S Oil is equal in remedial effects to a quart of any other kind. Hence as it is incomparably the best, so it is likewise far the cheapest.
Palatableness, speedy efficacy, safety, and economy unitedly recomend this unrivalled preparation to invalids.
Opinion of A. B. GRANVILLE, Esq., M.D., L.R.C.P., F.R.S., Author of "The Spas of Germany," "On Sudden Death," &c.
"Dr Granville has found that DR DE JONGH'S Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Newfoundland Oils. The Oil being, moreover, much more palatable, Dr Granville's patients have themselves expressed a preference for Dr De Jongh's Light Brown Cod Liver Oil."
Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.
SOLE CONSIGNEES,
ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

Just published, in 1 vol. 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,
VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.
By A PHYSICIAN, &c., &c.
(Registered under the New Medical Act).
Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

SECTION V.—The Vices of Schools—Effects of certain pernicious habits on the mental and generative faculties—Importance of Moral Discipline.
SECTION VI.—Treatment of nervous and generative debility—Impotence and sterility—Dangerous results of various hazardous specifics—The Author's principles of treatment; medical, dietetic, and general, derived from twenty years' successful practice

TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.
CONTENTS.
INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.
Consultations from 10 till 11 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

SPRING AND SUMMER ATTIRE.—

E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of Minories and Aldgate, and corner of New Oxford street and Hart street.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

THE "INDISPENSABLE" SUIT,

made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

TOURISTS AND EXCURSIONISTS

are specially provided for at E MOSES and SON'S, MERCHANT TAILORS HATTERS, HOSIERS, BOOT MAKERS, &c., CORNER OF MINORIES AND ALDGATE, CORNER OF NEW OXFORD STREET AND HART STREET; BRADFORD AND SHEFFIELD, YORKSHIRE.

TO INVESTORS.—CONSOLS CAPITAL STOCK is a medium for employing and improving large or small sums of money in connection with Government securities. The stock is issued by the Consols Insurance Association, 429 Strand, London. Incorporated pursuant to Act of Parliament. Investments bear five per cent. per annum interest, receivable monthly, if desired.

Full particulars may be obtained on application at the chief offices, 429 Strand, London, to

THOMAS H. BAYLIS, Managing Director.

TO MERCHANTS AND OTHERS.—Very Important.—The following letter has been received by the Secretary of the Additional Curates Society:—

London, Feb. 27, 1860.

Rev. Sir,—I should be glad to know how far the following plan would meet the wishes of your Committee.

I am thinking of making a special contribution (intended to be annual for at least some years, provided nothing unforeseen occurs), towards providing additional clergy for those parts of the metropolis where they are most needed, and which are the least able to provide them for themselves.

My wish, however, is that, wherever practicable, the parish or district shall provide a portion of the clergyman's stipend to meet a grant from the fund which it is my desire to help to form. It would also be my wish that, in order to get the parish or district gradually to find the whole of the stipend, grants should only be made for a limited number of years—say 3, 5, or 7—and with the understanding that they should annually be decreased. Should I resolve on contributing £200 or £300 a year, is it your opinion that others would be induced to join in the work? On those who make their money in a particular town or city it appears to me that there is an especial call to provide for the spiritual wants of the humbler inhabitants of that town or city, and I trust that there are many in London who will acknowledge the claim.—Yours obediently, A MERCHANT.

To Rev. W. R. Cosens, 7 Whitehall, S.W.

It is earnestly hoped that others who are interested in the humbler inhabitants of the metropolis may feel the claim upon them to provide for their spiritual wants, and assist in forming a London Diocesan Fund. All communications and contributions may be addressed to Rev. W. R. Cosens, the Secretary of the Society for Promoting the Employment of Additional Curates in Populous Places, at 7 Whitehall, S.W.

FLUID BLACK WRITING INK—never thickens in the inkstand, permanently jet black, and produces copies by the machine—recommended for rapid writing, and adapted to climates of extreme heat or cold—in stone bottles, pints 12s dozen, quarts 24s; or packed in casks for exportation or the country, one dozen quarts 25s, two dozen 50s, three dozen £3 12s 6d.

NISBET and PARKER, Engravers, Printers, Account Book Makers, Manufacturing and Exporting Stationers, 43 Mark lane, London.

HEAL and SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bed Ink, and Bedroom Furniture facturers 196 Tottenham court road W.

MAPPINS' CUTLERY AND ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"50th Geo. III., c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,

MAPPIN BROTHERS,

Queen's Cutlery Works, Sheffield; and 67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

DINNEFORD'S PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

CAUTION.—FORD'S EUREKA SHIRTS.—As spurious shirts are advertised and sold as "Ford's Eureka's," none are genuine unless stamped thus:—"R. FORD'S EUREKA SHIRT, 38 POULTRY, LONDON."

Best Quality:—Six, for 42s.
Second Quality:—Six, for 33s.
Richard Ford, 38 Poultry, Bank, London, E.C.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

East Indian Railway House, Alderman's walk, New Broad street, London, 21st April, 1860.

GRAND TRUNK RAILWAY COMPANY OF CANADA.

The Directors of the Grand Trunk Railway Company of Canada, in inviting subscriptions for the Second Preference Capital, beg to state that its amount is £1,111,500, and that it bears interest at the rate of 6 per cent. per annum, payable on the 1st of April and the 1st of October in each year, in Debentures expiring 1st April, 1879.

It ranks next in priority after the £2,000,000 Six per Cent. Preference Bonds issued in 1858.

During the last six weeks the average weekly receipts (notwithstanding the great deficiency of rolling stock and other accommodation) have been £14,056, or at the rate of £14 9s per mile per week, being an increase of 42 per cent. as compared with the same number of weeks at the corresponding period of last year; and it is calculated that a receipt of £13 17s per mile per week will pay all working expenses, including the rent of the Atlantic and St Lawrence Railway, which amounts to £73,000 per annum, as well as the interest on the First and Second Preference Debentures.—By order of the Board of Directors, C. P. RONEY, Secretary.

21 Old Broad street, London, E.C., April 30, 1860.

GRAND TRUNK OF CANADA RAILWAY.

Having received instructions from the Directors of the Grand Trunk Railway of Canada to offer to the Public the whole of the Second Preference Debentures of that line, authorised to be raised by an Act of the Provincial Legislature, and in amount £1,111,500; having 19 years to run, and payable off 1st April, 1879.

Notice is hereby given, that Tenders will be received by us up to the 9th of May, at Twelve o'clock. Each Tender must be accompanied by a deposit of 10 per cent. upon the amount tendered for, which should be paid to Messrs Glyn and Co., and their Receipt sent with the Tender to us. The minimum price will be 80 per cent. In case of the applications being in excess of the amount, a pro rata distribution will be made, preference being given to the highest biddings. Interest will be allowed from the 1st of January on these Debentures, at the rate of 6 per cent. per annum; but the Interest on them being payable by Coupon on the 1st of April and the 1st of October, 1½ per cent. will be allowed on the payments. The payments are to be made as follows:—Deposit of 10 per cent. on subscribing; 25 per cent. on the 22nd of May; 30 per cent. on the 6th of June; and the remainder on the 26th of June. A discount of 3 per cent. will be allowed upon payments in full. The payments to be made to Messrs Glyn and Co.

JAMES CAPEL, NORBURY, TROTTER, and CO.

REPORT

IN THE NAME OF THE BOARD OF DIRECTORS OF THE

CREDIT FONCIER OF FRANCE,

By Monsieur L. FREMY, Councillor of State in Extraordinary Service, Governor.

AND

REPORT OF THE CENSORS FOR 1859.

GENTLEMEN,—In the Report presented to you last year you remarked the results obtained by your Company during 1858. Two points especially attracted your attention; the more advantageous conditions on which we had been able to make our loans, and, as a consequence, the increase of the total of our operations.

The year 1859, to which we are now about to call your attention, will present results no less satisfactory. Our credit has been still further extended and consolidated, and, although the past year has not been signalised by any of those great transactions of which we had to speak at our last meeting but one, you will observe a considerable increase in the principal branches of our operations.

Thus, the number of loans, which in 1858 was only 227, rose to 357 in the year 1859. The amount of the loans for short periods reached the sum of 7,471,000f. The average of the sums deposited in virtue of Article 2 of the Statutes, which was 23,838,126f 57c in 1858, was 67,035,247f 31c in 1859. The advances on mortgage (real property) bonds, as yet of no great importance considering the amount of the emissions, have undergone further development; and lastly, the general movement of our cash office, which, in 1858, did not exceed 462,000,000f, amounted in 1859 to 1,208,000,000f.

Such a success obtained during a year of political vicissitudes is remarkable for more than one reason. It proves the extensive relations that your institution has created, the importance of the interests connected with it, and the confidence it inspires. If the nature of its operations still presents difficulties which it is most desirable to overcome, the time is passed when it had, at every step, to defend itself against unjust prejudices. No one any longer disputes the advantages of loans for long periods since the reduction to one-half per cent. of the indemnity due on anticipated reimbursements, and the public better understands the combination of loans on mortgage (real property) bonds, now that the rate of the annual instalments has declined in consequence of the rise in the market price of those securities.

This situation accounts for the high favour in which your shares are held in the market; but, if it is not indifferent with regard to your profits, neither is it indifferent to the interests of the borrowers, which are so intimately connected with your own. By extending the basis of your credit, it enables you to give a wider range to your services.

LOANS.

The loans effected in the year 1859 formed a total of 33,857,300f, viz.:—

	f
343 loans at long dates	26,386,300
14 loans at short dates	7,471,000
357 Total	33,857,300

1. LOANS AT LONG DATE.

The loans at long date were as follow:—

277 loans for	20,434,360
in 4 per cent. bonds with prizes	
66 loans	6,092,000
in 5 per cent. bonds	
343 loans for	26,386,300

These loans are distributed thus:—

1. Department of the Seine, 233 loans for	20,415,500
2. Other departments, 110 loans for	5,970,800
Total	26,386,300

In 1858 the number of loans was only 227, for a sum of 33,041, 200f.

Increase, in 1859, of 116 in the number of loans.

Diminution of 3,654,900f in the amount of the sum lent.

But if we deduct from the amount of the loans realised in 1858, the exceptional loan of 11 millions granted to a single borrower, the Compagnie Immobilière de Paris it will be found that the sum lent in 1859 exceeded that lent in 1858 by 7,345,100f.

The number of loans at long dates effected since the foundation of your Company was, on 31st December, 1859, 2,074, for a sum of 139,923,630f.

Of this sum the Company has been reimbursed:

	f	c
By half-yearly instalments	3,504,591	79
By anticipated reimbursements	9,130,711	26
	12,635,663	5

The number of loans granted in 1859 in the departments was again inferior to those granted in Paris. This fact is not infrequently made a subject of reproach to your Company, as if a different result was dependent on its will. But this reproach is unmerited. If your loans are more numerous in the department of the Seine, it is because the demands made are more numerous. The habit and knowledge of business are in fact more general there; the owners of property are always better acquainted with new facilities of credit, and more disposed to take advantage of them. This circumstance is not peculiar to your Company; the same has occurred to all other institutions, and even to the Bank of France.

However, the number of loans wanted in the departments was in 1859 far more considerable than in preceding years, and the present state of our relations makes us hope that it will still further increase.

INSTALMENTS OF LOANS AT LONG DATE.

	f	c
INSTALMENTS PAID.—During the year 1859 the Company had to receive in half-yearly instalments	6,338,686	84
It received	6,209,693	24
Remaining due	127,193	40
INSTALMENTS IN ARREAR.—On the 31st December, 1859, the amount of instalments in arrears was 151,609f 60c.	f	c
Of which, for preceding years	24,416	20
And for 1859	127,193	40
Total	151,609	60
This sum of 151,609f 60c has been since reduced by sundry payments, and is now	f	c
	101,769	90
INSTALMENTS ANTICIPATED.—The instalments paid in advance up to the 1st January, 1860 (not being due till the 31st of the same month), amounted to the sum of	206,410	80
Besides this sum your Company also received for the half-year ending 31st July next	64,129	55
Making the total of instalments thus paid beforehand	270,540	35

2.—LOANS AT SHORT DATE.

The loans at short date up to 31st December last were 17, for a sum of 7,831,000f.

All these loans, with the exception of three amounting together to 360,000f, were made during the year 1859.

You perceive that this kind of operation has assumed a certain importance from the first year. We have thus been able to afford effectual aid in rendering profitable ground hitherto unproductive, and at the same time that we found a useful investment of our social capital, we were preparing for the future loans at long date. Indeed, one of these loans at short date having come due has been converted into a loan of long date.

3.—LOANS FOR DRAINING.

On the 31st December, we had received 45 applications for loans to be employed in draining, forming together a sum of 408,699f 17c.

	f	c
Of these applications,		
2 had been granted for a sum of	38,000	0
20 authorised by your Council for a sum of	178,249	17
5 rejected	24,400	0
2 withdrawn	30,000	0
16 still under consideration	140,000	0
45 Total	408,699	17

The loans for draining purposes have not attained the development expected.

ISSUE OF BONDS.

The number of bonds issued during the year 1859 was 41,020, for a sum of 24,365,400f, viz.:—

Bonds at 3 and 4 per cent.			f
(loan of 200 millions)	19,854	for a sum of	13,782,400
Bonds at 5 per cent.	21,166	for a sum of	10,583,000
Total	41,020		24,365,400

	f
The amount of bonds, figuring in the liabilities on the 31st December, was	122,665,400
After deducting the bonds deposited with your correspondents for a sum of	184,800
There remained in circulation, Dec. 31, 1859	122,480,600

The bonds in circulation are thus classified:—

Bonds at 3 and 4 per cent.	370,820	for	97,097,400
Bonds at 5 per cent.	65,136	for	32,568,000
	435,956	Total 31st Dec.	129,665,400

	f	c
If we compare the amount of loans at long dates and at short dates, say	134,241,966	85
With the amount of bonds in circulation, deducting those deposited with the correspondents, and those partially paid up, say	127,024,800	0
We find that the amount of loans on the 31st December, exceeded the amount of the bonds in circulation by	6,317,166	85

If we make a similar comparison, distinguishing them by the rate of interest, we find:—

	f	c
Loans at interest of 5 per cent. for a sum of	33,384,067	68
Bonds at interest of 5 per cent. for a sum of	32,480,000	0
Excess of loans at 5 per cent. over the bonds at the same interest	904,067	68

The rest of the loans are represented by bonds belonging to the loan of 200 millions, at an interest inferior or equal to 4.51 per cent.

The amount of our bonds in circulation, in 1859, in an equal proportion with the amount of our loans, in strict conformity with the fundamental principles of your institution.

As to the quotations in the market, after experiencing a fall inevitable during the war, less however than other securities, they very soon rose again, and have not been less firm in 1859 than in 1858.

The following table shows the average price of our securities during December in the years 1857, 1858, 1859:—

Years.	4 per Cent. 500	4 per Cent. 100	3 per Cent. 500	3 per Cent. 100
1857	426.11	91.08	402.21	79.56
1858	474.90	93.64	446.15	67.38
1859	474.19	97.22	454.46	90.51

DEPOSITS OF FUNDS.

On the 31st December, 1859, the balance of our deposits was 55,758,459f 65c.

	f	c
Of which in account current	54,683,059	65
— in cheques on cashier	1,075,400	0
Total as above	55,758,459	65

The maximum balance during the year was 88,143,723f 2c.

The minimum balance, 40,547,132f 95c.

The number of accounts was, on the 31st December, 4,229.

We called your attention last year to the importance of this department. The modification which we proposed to introduce in your Statutes, which was intended to give us greater latitude in the employment of the funds deposited, has been approved by the Government, and we have already experienced its good effects; but we shall return to that subject hereafter.

ADVANCES ON SECURITIES.

1. ADVANCES ON FONCIER (MORTGAGE) BONDS.

The amount of the advances on foncier bonds during the year 1859 was 8,010,113f 45c.

	f	c
The balance of these advances on 31st December last was	5,084,165	61
On 31st December, 1858, it was only	2,033,816	93
Increase on 31st December, 1859	3,050,348	68

The amount of the advances on foncier bonds made by the Bank of France during the same year was 5,946,800f.

The balance in December, 1859, was 1,004,000f.

2. ADVANCES ON SUNDRY SECURITIES.

During the year 1859, the amount of these advances was 10,301,000f, viz.:—

	f
On railway bonds	10,062,500
On various other securities	239,400
Total	10,301,900

The balance of these advances on the 31st December, 1859, was only 214,882f 30c.

You are aware that till last year we were not authorised to engage in operations of this kind.

DIVISION OF THE PROFITS OF THE YEAR 1859.

	f	c
The gross returns of the year 1859 amounted to	8,926,884	29
The expenditure amounted to	6,205,467	43
Net profits	2,721,416	86
The shareholders received 5 per cent. on interest account, say	748,237	50
Balance in hand	1,973,179	36

Which we propose to employ in the following manner:—

1. To the reserve fund, 20 per cent., the maximum authorised by the Statutes, say 394,635f 86c.

2. To the liquidation of all the outstanding accounts of preceding years, say 80,000f.

These accounts amount to the sum of 123,042f 90c, on which we are sure of recovering at least 35 per cent. By appropriating to this liquidation the sum of 80,000f, we shall have made provision for all eventualities, and covered beforehand any possible deficit.

3. To the payment of a dividend of 12f 50c, which wil ake, with the 12f 50c already paid, a total dividend 25f, representing 10 per cent. on the 250f paid up on ch share, say 749,687f 50c.

As to the 748,856f which form the remainder, and hich represent another 5 per cent. on the paid-up capi- d, we propose to employ it in liberating the part of he social capital invested in the houses belonging to he Company.

You are aware, gentlemen, that your social capital is t ones a guarantee fund and a means of meeting un- foreseen requirements, and that consequently it ought to be clear and available at any moment.

This capital, which amounte to 15 millions, is at pre- ent composed of 12,423,509f 58c in specie or securities immediately realisable, and of 2,571,490f 42c in real property. These houses most assuredly represent a alue at least equal to the sum expended in their pur- hase and fitting up; but it cannot be denied that, while so invested, the Company has not the command of the ntire social capital, and could not employ it as might be required. This situation, without being irregular, is not altogether in keeping with the scrupulous exactitude and prudent foresight which characterise all the acts of your administration. Therefore, in proposing to you a measure which will have the effect of rendering your capital available, we are only following the track in which we have constantly advanced since our first origin, and are acting in perfect conformity with the precedents you have sanctioned.

In fact, have you not every year, guided by that spirit of prudent economy, added to your reserve fund the maximum authorised by your statutes? Have you not also, from the very beginning of your establishment, created a provident fund to which every year hes fur- nished its contribution? In 1858, after having limited the divident to 9 per cent. on the capital issued, did you not pay into this provident fund the important sum of 2,086f, and still more recently, when you decided on extending your operations to the territory of Algeria, did you not resolve that the greater part of the profits accruing from those operations should be appropriated to the cancelling of the bonds issued for advancing those loans?

In practising, as you have hitherto done, this system of prudence and economy, you have not merely had in view the accumulation of capital, in order to secure for the future advantages which you might have now en- joyed; you were well assured that in so doing you also promoted the prosperity of the present, and accelerated the development of your operations.

It has not escaped your observation, indeed, that your strength being in your credit, the more rapidly you gain the confidence of the public, the sooner will you enter upon prosperous times, and that the most certain means of gaining this confidence, of obtaining this credit, is to prove yourselves anxious to found an important and durable establishment, surrounded with guarantees and precautions which will enable it to meet all eventualities, and to pass uninjured through circum- stances against which even the strictest prudence might deem it unnecessary to make provision.

Hitherto the payment of the dividends on your shares has taken place three times a year; in conformity with Article 39 of the Statutes, a first provisional dividend is paid on the 1st of July every year, a second on the 1st of January of the current year, and the complementary dividend after your general assembly on the 1st May. This mode of payment has the inconvenience of causing you unnecessary journeys, and also of multiplying our writing and expenses. In consequence your Council has recommended that in future the payment of the divi- dends shall only take place twice a year: one provisional dividend of 5 per cent. on the paid up capital, or 12f 50c per share, to be paid at the end of the year, and the com- plementary dividend on the 1st July following, about two months after your general meeting. This, with the ex- ception of the dates, is the system adopted by the Bank of France.

However, in order to avoid all possible derangement, this measure will not be adopted till next year. Thus, you will receive on the 1st of May the complementary dividend for the year 1859; on the 1st of July, as usual, you will receive a first provisional dividend for 1860, and on the 1st January, 1861, a second dividend, but the complementary dividend for 1860 will not be paid till the 1st July, 1861.

We will now proceed to examine several questions, to most of which we directed your attention last year also.

Modifications of the Statutes.

You have conferred upon us the necessary powers for introducing into your Statutes, in concert with the Go- vernment, several modifications, which experience has shown to be necessary.

We asked that we might be permitted:—

1. To extend the advantage of paying by instalments to the loans made for a less period than ten years.

2. To employ, within certain limits, for a different purpose from that fixed by Article 2 of our original statutes, the funds you were authorised to receive as deposits.

3. To lend more than one million to the same borrower.

With regard to the first proposition, the First Article of our new Statutes runs thus:—

"The ..... Company is founded for the purpose of lending on mortgage to owners of real estate sums to be repaid either at long dates by annual instalments, or at short dates *with* or without annual instalments."

The second is found in Article 2, § 2, which is thus expressed —

"These funds (the funds received as deposits) may be employed to the extent of one-half their amount, and for a term not exceeding 90 days, either in making ac- cording to the conditions decided by the Council of Ad- ministration, advances on the bonds issued by the Com- pany, or any other securities which would be received at the Bank of France as a guarantee for advances, or in the purchase of Treasury Bonds.

Lastly, the third has been approved by the suppression of Art. 37 of the old Statutes, which fixed a million as the maximum loan to one borrower.

These modifications will have a very great influence on your situation; the year 1859 already derived some advantages from them, and they will produce in the future, we have no doubt, the favourable results we ex- pect from them.

Loans to Departments, Communes, and Syndical Associations.

In conformity with your deliberation of the 27th April 1859, we solicited authorisation to lend, without mort- gage securities, sums, to be repaid either at long or short dates, to departments, communes, and syndical associa- tions. Our application was favourably received by the Government, and we should now be able to announce to you the conclusion of this affair, if, in order to ac- complish one of the conditions essential to your ac- quiescence, it were not necessary to have recourse to the legislative authority.

You coincided with us in the opinion that our bonds, especially appropriated to the realisation of mortgage loans, could not properly be employed in making de- partmental and communal loans, and you consequently decided that it would be advisable to create for this new category of operations special and distinct securities which would not be confounded with our mortgage bonds.

You did not come to this resolution through any appre- hension of weakening the guarantee on which our foncier (mortgage) bonds depend. The departmental and commu- nal security, on the contrary, appear to you, as it did to us, altogether unobjectionable; but you were anxious, in establishing this distinction, to preserve entire and dis- tinct the mortgage bonds which are now so well appre- ciated in France, and have been, so far, a favourite in- vestment with the capitalists of the departments.

Now for this distinction to be real and effective, it is not sufficient to make some difference in the form and name of the bonds; it must also be sanctioned by the law. It is necessary that the law, departing from the general principles which govern commercial companies, should decide that, exceptionally, and for the present circum- stance, there shall be, as it were, two companies in one; that you shall have, on the one hand, mortgage creditors to whom privileged mortgage securities shall be affected, and, on the other, departmental and communal creditors who shall also enjoy the same privileges with respect to the guarantees affected to these latter operations.

We must not conceal from you the fact that the Government, less struck than your administration and yourselves with the necessity of maintaining the mort- gage bonds perfectly distinct, endeavoured to dissuade us from the creation of a new bond; but, supported by your decision, and after mature deliberation, we thought it advisable to persist.

We believe that this affair will be terminated in the course of the present session.

Treaty with the Building Contractors' Discount Bank.

We will not enter into any details respecting the pro- posed treaty with the Building Contractors' Discount Bank, which you have authorised us to conclude, as we gave you full information on that subject last year.

One of the clauses stipulates that the guarantee of 2½ millions granted to the Discount Bank by the State, shall be maintained in favour of the Credit Foncier.

This clause affects the interests of the Treasury, and therefore renders necessary the intervention of the legislative power.

A Bill drawn up for this purpose, and approved by the Council of State, has been presented for the sanc- tion of the Legislative Body, and we have good reason to think it will be passed during the present session.

Extension to Algeria of the Operations of the Credit Foncier of France.

We convoked you in extraordinary general assembly on the 25th of January last for the purpose of submit- ting to your consideration a project for extending to the territory of Algeria the operations of the Credit Foncier. We then laid before you the conditions we had stipu- lated, and the limits within which we had deemed it ad- visable to circumscribe our proceedings: you approved these propositions.

A Government decree, dated 10th March, promulgated and rendered executory in Algeria the Legislative Acts which organised your institution, and which alone could empower it to act on the same conditions as in France. We shall very shortly be able to begin our operations, and we hope that our intervention, while advantageous for your interests, will exercise a salutary influence on the state of credit in Algeria.

Agricultural Credit.

In calling your attention last year to the formation of a Company of Agricultural Credit, we explained the origin, object, organisation, and means of action of that Company. We then proceeded to state that this new con- cern should not be confounded with the Credit Foncier, that it should remain altogether distinct from our pre- sent interests, and that, though managed by the same administration, it would impose upon us no financial responsibility.

If this project has not yet been realised, it is not because we have given it up: we are, on the contrary, as much as ever convinced that it ought to be carried into execution.

Accordingly, during the time which has elapsed since our first communication, more profound studies of the question have enabled us to introduce useful modifica- tions into the Statutes, and we have entered upon negotiations with the Government, of which you have to appreciate the successful results.

The following are the chief modifications we have adopted:—According to the terms of our original project, the Company was to limit its operations to discounting with its own funds, or to facilitating the discounting at the Bank of France, of bills bearing two signatures. This discounting was necessarily subjected to the conditions imposed by the Bank, one of which, you are aware, is that the bills must not have above 90 days to run. Now this limit is far too narrow for farmers, and credit offered on such terms would be unavailable to them. A fortiori, the case would be quite as unfavourable for all manufac- turers dependent on agriculture. What country manu- facturer would undertake to build an establishment of any kind and buy machinery by the aid of a loan which must be repaid in the course of a few months? It was therefore indispensable either to refrain from these last operations, or to find a means of securing to the borrower a longer delay in case the Bank would not renew the bill. We have surmounted this difficulty by introducing into the Statutes the faculty of making loans for a longer date than those of the Bank of France, without exceeding three years however, and of issuing, to meet these requirements, bonds made payable in less than five years

As to our negotiation with the Government, its ob- ject was to obtain from the Treasury a serviceable offi- cial assistance which might procure us certain financial advantages, and, placing ourselves under the patronage of the Emperor, might convince the public that we pro- posed founding, not a speculating bank, but an institu- tion destined to render real services to the country. Our efforts to attain this end have not been in vain, and we are authorised to declare to you that our hopes will soon be realised.

We have now only to offer you the opportunity of tak- ing an interest in this new concern. We announced to you last year that out of the 20,000 shares, 15,000 would be reserved for you, which is in the proportion of one share of the new Company to four of the Credit Foncier Company's.

The subscription will be opened very shortly.

Advertisements, inserted in the usual form, will apprise you of the time and condition of this subscrip- tion.

The preceding statement has enabled you to appre- ciate the number and importance of the operations with which the Credit Foncier is at present charged. For labours of such various kinds, your Administration re- quires no less zeal than capacity in its different mem- bers; and in the course of the past year these necessary qualities were never found wanting. We are, therefore, most happy on the present occasion to do our fellow- labourers all the justice they merit, and we hope that, aided by their devotedness and intelligence, it will be our good fortune in the future, as it has been hitherto, to satisfy all the interests intrusted to our care.

According to the terms of Articles 24 and 27 of the Statutes, the renewal by fifths, of your first Council of Ad- ministration began with the sixth year of the Company's existence.

The four administrators designated by lot to retire are:—

MM. Hailig, De Rainneville, Dsilly, Firino.

The order of seniority designates M. Cotelle as the cen- sor who retires in 1860.

The retiring members are re-eligible.

OBSERVATIONS MADE IN THE NAME OF THE CENSORS

By M. PARAVEY.

Gentlemen,—Important measures and important re- sults mark the year of which the accounts are now sub- mitted to you.

You already know the results. They may be resumed in a few figures easily remembered, and which it is in- teresting to compare with those of the preceding year.

The loans made for long terms were 343 in 1859, for a total sum of 26,386,300f. In 1858 their number was 227, for a total sum of 33,041,200f. The Governor has explained to you that this diminution in the amount of the loans is owing to the exceptional importance of a loan made to a single borrower. The progress of your operations is proved by the increase in the number of borrowers.

The loans for short terms began only in 1858, and the total amount advanced in that year was 360,000f. In 1859 they amounted to 7,471,000f.

The issues of bonds increased in the same proportions; the circulation of your bonds has increased 24,365,400f in 1859.

By the side of this development of the operations which constitute the essential object of your institution, the Bank of Deposit which comes to their aid, equally serviceable to the interest of both leaders and borrowers, since its object is to facilitate the sale and improve the condition of your bonds, has continued to exhibit an extension which shows what confidence the public has in your administration, and which the modifications in- troduced into your Statutes will prevent from proving inconvenient either to the Company or the Treasury.

The deposits in 1858 were 111,956,975f 78c, leaving a balance in hand on the 31st December of 38,937,454f 64c; while in 1859 they rose to 274,382,561f 83c, and the balance on the 31st December last was 55,758,459f 65c.

The advances on securities were 7,594,514f 38c in 1858, but rose in 1859 to 18,312,013f 45c, thus justifying, more and more, by the services rendered to the holders of your bonds, the opening of this bank, which is at the same time a source of profit to the Company.

Lastly, gentlemen, you must have been struck with the figures in the report laid before you by the Gover- nor; the general movement of your bank, which, from 1857 to 1858, rose from a total of receipts of 73,245,053f 26c to 241,853,504f 24c, further rose in 1859 from this last amount to 1,208 millions.

In presence of these figures, carefully verified, and offering their results with all the characters of certitude, the habitual severity of your Censors has no objection, no doubt to raise against the division of profits now proposed, and which is again one per cent. higher on the paid-up capital than it was last year.

Some persons might be inclined to ask whether the results obtained would not justify making it still higher. But on this point we fully coincide with the wise reserves of the Council of Administration and the considerations so ably stated by the Governor in his report: it would be impossible for us to express in more fitting terms ideas so just, so sound, and so consistent with the true interests of the Company. Besides the special require- ments of our kind of operations, which compel us, as you are aware, to lay aside out of the produce of the first years the funds necessary to meet the bonds during the last years—besides the advisability, nay even the duty imposed upon us of liberating as far as possible our social capital, which is in reality, as stated by our Governor, only a guarantee capital, you cannot but know how much a well-applied system of reserve con- tributes to the power and credit of an institution like yours. If, which God forbid! bad times should come, you will have reason to rejoice at your prudence; if prosperity continues, as everything would seem to presage, the reserves you have made (and which are in themselves an element) may one day, when no longer necessary to assure or increase the Company's means of action, be divided among the shareholders as a supple- mentary dividend, or by a partial liberation from what remains to be paid on their shares.

An institution so firmly founded, and which grows so fast as ours, can hardly resist its innate tendency to ex- tend itself, or hold out against the solicitations ad- dressed to it from without to allow other enterprises,

worthy of interest, to profit by the power at its disposal. We readily acknowledge that it ought not always to resist, nor absolutely refuse either to render the services desired of it, or to profit by the advantages to be derived from a reasonable and natural extension of its own peculiar operations. But we are convinced that we shall have your approbation for remaining strictly faithful to its essential object, and for watching with jealous care that a legitimate and honourable desire to make it more and more useful to ourselves and to others shall never expose it to turn aside from what constitutes its special utility.

It is in this spirit that the Council of Administration has examined and resolved the questions relating to the modifications of the Statutes and the extension of operations mentioned in the Governor's report, and most of which you have sanctioned by your votes. It is in the same spirit that we shall continue to examine those which may be presented hereafter, certain that this fidelity to the principle of our institution, which is at the same time its strength, is the best means of securing our profits in the future, and also the advantages it may render to others.

Though it is equally disagreeable for those who speak and those who listen, to be always saying and hearing the same things, we should much regret not having to bear witness to the concord existing on all points between the Government of the Credit Foncier and your Council of Administration; as also to the good will, zeal, and intelligence which preside over the transaction of your affairs in all ranks and all degrees of this great Administration, whose labour increases with every passing year, as do also its claims on your gratitude.

GENERAL MEETING OF 18TH APRIL, 1860.

Resolutions.

I.

The meeting unanimously approves the accounts presented, and fixes the dividend for 1859 at 25f. Consequently the shareholders are to receive a supplement of 12f 50c per share, which, added to the 12f 50c paid on 1st July and 31st December, 1859, makes the interest on the paid-up capital 10 per cent. for the year 1859.

II.

The meeting unanimously decides that a sum of 334,635f 86c shall be carried to the reserve fund.

III.

The meeting, in execution of Art. 24 of the Statutes, unanimously appoints as administrators for five years:—Messieurs Hailig, De Rainneville, Dailly, Firino; and Censor for three years, M. Cotelle.

Before separating, the assembly unanimously adopted a vote of thanks to the Government of the Credit Foncier and the Council of Administration.

CREDIT FONCIER OF FRANCE.

Balance Sheet on 31st December, 1859.

LONDON AND SOUTH AFRICAN BANK.

To be Incorporated by Royal Charter, with Limited Liability. Capital £400,000, in 20,000 shares of £20 each, with power to increase. One-fourth of the capital will be reserved for the Colony. Deposit £2 per share, of which £1 must be paid upon application, and £1 upon allotment.

Directors.

John Berry, Esq., Messrs Barry and Nephews, London and Cape Town.
Thomas Tyringham Bernard, Esq., M.P., Director of the London and County Bank.
Philip Patton Blyth, Esq., Director of the London and County Bank.
John Hegan, Esq., 11 New Broad street, London.
Colonel Holland, Director of the Agra and United Service Bank.
John Henry Lance, Esq., Director of the London and County Bank.
Joseph Levick, Esq., Messrs Levicks and Sherman, London and Cape Town.
Joseph McMaster, Esq., Messrs McMaster and Crump, London and Graham's Town.
Charles Maynard, Esq., Messrs Maynard Brothers and Co., London, Port Elizabeth, and Graham's Town.
Adolphus Mosenthal, Esq., Messrs Mosenthal and Co., London, Port Elizabeth, and Cape Town.
Wm. Nicol, Esq., M.P., Deputy Chairman of the Chartered Bank of India, Australia, and China.
John Robert Thomson, Esq., Messrs J. R. Thomson and Co., London, Cape Town, and Port Elizabeth.

Bankers.—London and County Bank.

Solicitors.

Messrs Wilkinson, Stevens, and Wilkinson, Nicholas lane, Lombard street.

Secretary.—John A. Merington, Esq.

Brokers.

Messrs P. Cazenove and Co., 52 Threadneedle street.
G. E. Seymour, Esq., 38 Throgmorton street.

Temporary Offices.

Gresham House, (16) Old Broad street, E. C.

The London and South African Bank has been formed to afford an increased and much-wanted Banking accommodation to the Cape of Good Hope, and its sister Colony of Natal.

No British Colony enjoys so favourable a position for commercial pursuits, and possesses so many of the elements of profitable industry, as the Cape of Good Hope. It is the central depot of the Southern hemisphere, on the great maritime highway between Europe, Australia, India and China; and steam navigation has recently brought its capital town within thirty-five days' sail of this country. Such is the variety and fertility of its soils, that all the products of England, France, and Italy can be reared from them, and Natal is now producing the choicest tropical articles—cotton, sugar, and coffee.

The Cape has, since 1853, enjoyed a free representative constitution; and in spite of the retarding influence of the Kaffir wars, now happily terminated, it has so rapidly developed its material resources that the ratio of their recent increase exceeds that of the mother-country, and of all her other dependencies. In illustration of this striking fact, it may be mentioned that the revenue which, in 1852, was £289,482, had increased in 1859, to £469,073, nearly doubling itself in less than seven years. The total value of the imports (chiefly consisting of British produce and manufactures), was, in 1856, £1,404,398, whilst in 1859 it amounted to £2,379,030. The value of the exports had been augmented in the same period, from £1,136,136 to £1,818,080. A large portion of that increase arises from the impetus given to the two Colonial staples of wool and wine. The quantity of the former exported has risen from 13,974,926 lbs in 1853, to nearly 19,490,194 lbs; whilst in wine, the increase within the same period is upwards of 40 per cent., the latest return showing the total quantity exported to be upwards of one million of gallons. This great increase in the elements of wealth, affords unequivocal evidence of the vast resources of the Colony, and the vigorous industry of its inhabitants.

The internal improvements in railways, docks, and other public works are keeping pace with the material prosperity of the Colony. A sum of £50,000 is annually expended in promoting emigration from this country.

The Local Banks, with their limited capitals, are now found to be quite inadequate to meet the increased demand upon their resources, arising from the continued advance of the trade and industry of the Cape. Every mail has brought urgent appeals for the establishment of a Colonial Bank in this country; but these have not hitherto been responded to, in consequence of the uncertainty of the law at the Cape with reference to the legal rate of interest. All doubt on this point has been removed by a recent judgment of the Supreme Court of Judicature, by which it has been decided that there is no fixed legal rate; but that money, like all other commodities, is perfectly free for trading purposes. A very favourable opportunity, therefore, now presents itself for the establishment of the London and South African Bank, of which the capital can be at once and profitably employed in the several branches of legitimate banking.

The success which has attended all the Local Banks, notwithstanding their deficiency in capital, will be seen from the market value of their respective shares and their last annual returns:—

Shares.	Paid.			Latest Dividends.	Price. Per cent.	£	s	d
£	s	d	£ s d					
50	0	0	60 0 0	Cape of Good Hope Bank	18	88	0	0
50	0	0	30 0 0	South African Bank	13	45	0	0
25	0	0	25 0 0	Eastern Province Bank	20	45	0	0
50	0	0	6 0 0	Cape Commercial Bank	19	9	9	0
50	0	0	15 0 0	Port Elizabeth Bank	20	28	0	0
5	0	0	5 0 0	Natal bank	22	7	15	0

The increasing value of money in the Colony is indicated by the fact that the interest upon Deposits has been raised by the Banks from 4 to 6 per cent.; whilst the rate of discount for the best commercial bills is on the average 8 per cent. Even at this rate, it is sometimes impossible to get these bills discounted, to the serious inconvenience of the mercantile classes.

The London and South African Bank will be constituted upon the model of the Metropolitan establishment for Colonial Banking. The Head Office will be in London, and Branches established in Cape Town, Graham Town, Port Elizabeth, and in other towns in the Colony and Natal, in which a safe and profitable business can be carried on. These Branches, supplied by the Capital, and efficiently controlled by the Parent establishment, will be Banks of Issue, Discount and Deposit, and form the channels through which the monetary and commercial transactions between the country and the colony can be cheaply and directly conducted.

The note circulation has proved a large source of profit to the Metropolitan establishments, and to the Local Banks.

A Bank which enters upon a field of business, awaiting its reception, and yearly enlarging itself, cannot fail to yield a handsome dividend to its proprietors. Estimating its nett revenue from the successful results of the London Colonial Banks, the London and South African Bank should realise returns equal at least to those shown in the following table, and which have been maintained in the face of an active competition:—

Name of Bank.	Paid-up Capital	Paid on each share.	Reserve Fund.	Paid per cent. 1857, with Bonus.	Paid per cent. 1858, with Bonus.	Paid per cent. 1859, with Bonus.	Present value of each share.
	£	£	£	£	£	£	£
Agra & U. Ser. Bank L	1,000,000	50	175000	11	12	12	77
Bank of Australasia	900,000	40	200000	20	20	20	73
Oriental Bank Corporation.	1,260,000	25	252000	12	12	17	43*
South Australian B. Co.	393,800	25	65742	12	8	9	32
Union Bank of Australia	1,000,000	25	200000	19½	20	16	47

* Ex div.

The note circulation of the four first-named Banks is stated in their last year's balance sheets at £2,022,436; being about forty-five per cent. of the aggregate amount of their paid-up capitals. The total amount of the deposits in these Banks is £10,122,735 6s 9d, which, with the note circulation, makes their credit capitals nearly three times larger than their paid-up capitals. The undivided profits, in reserve, average twenty per cent. of the amount of the shares.

Applications for shares must be accompanied by a deposit of £1 per share, in part payment of the deposit of £2 per share. Should the amount so paid exceed the £2 per share on the number allotted, the surplus will be returned; but if it fall short the balance must be paid on allotment, or, on default, the deposit will be forfeited, and the allotment cancelled. If no allotment be made, the deposit will be forthwith returned without any deduction.

Forms of application can be obtained at the temporary offices of the Company, and from the Brokers.

(From the Cape Argus, March 22nd, 1860.)

"An important decision of the Supreme Court, touching the rate of legal interest, is likely to afford some needed facilities to trade. Six per cent. has always been held by mere arbitrary custom to be the legal rate of colonial interest both on fixed and floating securities. But it was never decided that any other rate was illegal, and the question having been raised, the judges have now unanimously recorded their solemn judgment that the trade in money is free. Trade bills are now likely to find their legitimate and proper value.

"There are five banks in Cape Town at present, with paid-up capitals, circulation, and deposits, as per their accounts to December 31, amounting to only £1,064,589, or only about £100,000 more than was the banking capital and funds employed at the end of 1854, when the imports and exports amounted together to only £2,136,427, as against a present amount of £4,197,110. It is not be to wondered, therefore, that the money market is sometimes tight, and great desire is felt for the establishment of a bank as part of an English institution, which would, beyond doubt, do a good stroke of safe business on very remunerative terms. The attention of English capitalists might be very profitably directed to this subject."

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell — Mr W. Duncan Davison
Mr W. R. Sams — Mr Julius Benedict
Mr Thomas Chappell — Mr A. Blumenthal

Honorary Treasurers

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

Bankers.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Hanover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

The Political Economist.

SIR CHARLES TREVELYAN'S MINUTE ON MR WILSON'S BUDGET.

SIR CHARLES TREVELYAN has entered on the Minutes of the Madras Presidency an elaborate protest against Mr Wilson's scheme of finance. We greatly lament the publication of this document in India, and are apprehensive of its consequences. We scarcely know how the natives of India are to be governed, if one of their rulers tells them they ought not to be taxed, and the rest of their rulers tell them they *shall* be taxed. But in this country it is very important that we should hear all that can be said against Mr Wilson's plans as well as all that can be said for them, and Sir Charles Trevelyan's recall does not render it the less necessary that we should examine fully the nature of his objections. Indian finance is a very difficult subject, and though the minute of Sir Charles Trevelyan is rather too like a political pamphlet, we may overlook the defects of its form. We believe the publication of it will tend to strengthen the confidence which is at present felt in the soundness of Mr Wilson's plans. On a subject so vast and so little investigated as Indian finance, we could not be sure that there were not some considerations which we had wholly overlooked. We have now heard everything which can be said against Mr Wilson's scheme by a very competent and seemingly not reluctant critic: if he has discovered no conclusive objection to them, it is very unlikely that any such objection can be found.

It will be remembered that Mr Wilson found the deficit in India larger than he expected. It was 9,000,000*l* last year, and will probably be 6,500,000*l* this year. To meet this formidable deficit he imposed three taxes—an income tax, a license tax, and a tobacco tax. Sir Charles's criticism on these taxes is distinct enough. He says, first, that they are unjust as respects a great part of India; secondly, that they are unnecessary; lastly, that they will cause a rebellion. We will take these objections one after another.

First. Sir Charles observes that there was no mutiny at Madras, and therefore it is unjust that the people of Madras should be taxed to defray charges which, directly or indirectly, are consequences of the mutiny. India, he tells us, is not a unit; it is a composite country with many different races, who have very little in common, and who know nothing about one another; and he infers that we ought not to tax one for the fault of the rest. But if this principle is to be applied, we shall hardly find any one in India to tax at present. The only persons to blame for the mutiny were the sepoys, who have disappeared. The people of Bengal were as little responsible for the mutiny as those of Madras; and if the one are to be taxed on account of it, the others should bear a share of the burden too. Our Indian Empire is, in reality, a whole. Our rule is the same blessing everywhere; all races of natives benefit by it in the same way. And it must be taxed as a whole; we must preserve the *prestige* of our power: if we los part of India, we shall lose all of it: the preservation of Bengal is necessary to the security of Madras; all the provinces are equally interested in the continuance of our rule, and none of them can enjoy it unless the others have it also. It would be unjust, therefore, that one part should contribute more than another; and it would be disastrous, by a system of unequal taxation, to implant the bitterest of jealousies—pecuniary jealousy—between district and district.

Sir Charles proceeds to prove that these taxes are unnecessary, and this is the part of his argument which is most material. If new imposts are needless in India, no one will wish for them. Everybody admits that taxation is an evil, and that the less you have of it the better. Sir Charles says that the deficit (which he thinks is rather overrated) can be met by a reduction of expenditure, but on this subject he does not give us many details. He tells us, indeed, that the number of native *employés* in India is large—that if they were employed more productively it would be better—that the military expenditure is far larger than it was before the mutiny—that the troops in Upper India have been hastily got together at a moment of peril, are very expensive, and may be largely reduced in number. But there is nothing new in these remarks, and nothing exact. No one can tell how much the expenditure may in a few years be reduced by these means, but, at the same time, no one can tell how little it may be so. Nothing is easier than to write about economy, and nothing more difficult than to practise it. One instance of this will suffice. Sir Charles considers, no doubt correctly, that the reduction of the newly-raised levies in Upper India is the principal means of financial economy. He recommends that they shall be consolidated into a well-regulated police force; but who can tell us what this police force will cost,—who will calculate the expense of a vast corps, placed in new circumstances, scattered over a vast area, with an innumerable population both to protect and to control?

The vagueness with which Sir Charles estimates the main resource on which he relies is remarkable, because he criticises Mr Wilson for vagueness. Mr Wilson stated what is not denied, that there were no *data* for calculating the proceeds of such taxation in India. He declined to guess *in vacuo* as to its results. Sir Charles contrasts this procedure with his own. "I can," he says, "assign a fixed measure of the "results to be obtained by a reduction of the military expen- "diture." But he has not shown how much in fact that expenditure *can* be reduced. Trial alone can show that. Sir Charles can have no difficulty in proving that a saving of 6,000,000*l* will nearly reinstate the finances of India, but he has not proved that he will get this 6,000,000*l*.

There can be no ground for not reducing the military expenditure very considerably in India. We have insisted on it in the ECONOMIST ever since the mutiny was quelled. But

the reduction of expenditure cannot be looked upon as an unlimited source of financial improvement. It must, in the first place, be a reduction which will not impair the security of India. The people of England would bear anything rather than a daily apprehension for the lives of the English in India. We have the anxiety which was felt during the mutiny fresh in our remembrance; and we do not wish to suffer it again. Any reduction therefore in the military expenditure must be a *safe* reduction; and to be safe, it must be tentative and gradual.

Secondly. It must be remembered that India is not now an expensively governed country. The expenditure of the Indian Government was in the very expensive year of 1859-60, 47,277,000*l*. If we take this as the cost of governing India, we shall err largely on the side of excess, yet there are 132,202,000 inhabitants in India, and the cost is therefore about 7s 2d each. The cost of governing Great Britian and Ireland estimated in the same way, is 3*l* 6s 8d a head. Tried by this test, India is certainly not an expensively governed country. But the mere number of the population ruled is but a poor criterion of the difficulty of ruling them—of the work of the Government. The population in India is scattered over an enormous area,—that of England and Europe generally is concentrated. The cost of governing India is, nevertheless, much below the cost of governing England. It is less, though it might fairly have been more. We must not, therefore, speculate on unlimited reductions of expenditure, for we have to deal with an administration which even now, in comparison with others, is not costly.

Thirdly, We must not look simply to reinstating the finances in the position in which they stood before the mutiny. There was much that was unsatisfactory even then. No public works of magnitude could be accomplished without causing a great deficit. If, as Mr Wilson recommends, we are to take advantage of the present crisis to put our Indian finances in a really sound state, we must not regard the state in which they were in 1855 as a perfect model. Sir Charles Trevelyan seems in some passages to be afraid that the new taxes will make the Government too rich; but we can hardly hope that Mr Wilson will be so successful as that.

Sir Charles also tells us that the natives of India are peculiarly impatient of taxation. They will bear whatever imposts they have been used to, but they will bear no new ones. And undoubtedly such was the old Anglo-Indian creed. When Sir Charles received his education in India, no doubt he was educated to believe this. But the younger race of Indian statesmen hold a different doctrine. During the last twenty years,—and it was twenty years ago that Sir Charles acquired his knowledge of India,—there have been many changes, and these changes have convinced the best authorities at Calcutta and in various parts of India that new taxes can be safely and profitably imposed in India. The old officials told us that railways were unsuitable to native habits; yet railways exist and prosper.

Sir C. Trevelyan thinks there is danger in the course Mr Wilson has taken. But is there not greater danger in his own course? He has told the natives of Madras that new taxes which are unjust and unnecessary are about to be levied upon them. He has used his authority as local Governor to spread this doctrine. He has hinted that he expects the natives will rebel. Who will be to blame if they do rebel? Surely the ruler who was intrusted with an authority over 30,000,000 of people, and who incited them to resistance.

THE PAPER DUTY.

The resistance which Lord Derby has announced to the repeal of the Excise duty on paper raises one of the most difficult financial and political questions which we have had in this country for many years. In the first place, the proposal to repeal this duty was the weak point of Mr Gladstone's Budget. It was separable from all the other parts of it. We were engaged in a vast undertaking; we were abolishing the remnant of protective duties; we were simplifying our tariff; we were paying the cost of the French treaty. Every one must feel that these three operations were enough for one year. There was no occasion now to trouble ourselves with anything further.

Secondly. The argument which Mr Gladstone deduces from the cessation of the Long Annuities is not tenable. We have undoubtedly 2,000,000*l*, in a mercantile sense, "to the good" from that source. But it does not follow that we can afford to give up that portion of our national income. Unfortunately our expenditure has increased, and we are not so rich as we hoped to be. We cannot, therefore, afford to remit taxes as we otherwise might do. Indeed, Mr Gladstone does not remit taxes; he substitutes the income tax for the paper duty; he changes the incidence of the burden, but he does not diminish the pressure on the nation. Nor do we attach conclusive weight to the Report of the Inland Revenue Department. No doubt their objections to the tax are very true. Everything nearly which can be objected to a tax may be objected to this one. Still, when our finances have other claims on them, we must often for a time endure a very imperfect tax; we must "rub on" with it, so to say, till our difficulties are less.

Thirdly. There is no doubt that the provision for the finances of the year is not a very satisfactory one. The incipient war with China will, we fear, cost much, and there is no margin even now for extra charges. As we remarked three months ago, "very considerable credit is taken for an increased "consumption which must be hypothetical,—for the yield of "taxes of which the very existence is problematical,—and for "savings in departmental expenditure which have not yet "been made.'

Many of the small taxes on trade will never pass; indeed their nature has been much changed since the remarks just quoted were written. We cannot calculate the yield of those which may pass exactly. Nor can we rely with perfect confidence on the increased consumption of articles affected by the French treaty. We are, indeed, disposed to think that a cheap and light wine will be drunk much more extensively in this country than it ever has been,—but we do not like to speculate on a revenue from such a source. It may be substituted for other duty-paying stimulants, and then our revenue might not be improved.

All these reasons seem to be in favour of Lord Derby's resistance to the repeal of the paper duty; and we think they undoubtedly show that Mr Gladstone should not have proposed to repeal it. We regret that he has burdened our finances this year with an additional difficulty. But these considerations by no means exhaust the question.

First. We must bear in mind that it is hardly right to keep an important trade in a state of suspense. After what has occurred, no one will ever believe that the paper duty will be permanent. If we postpone the repeal of it till next year or the year after, we expose a large branch of industry to the paralysing effect of uncertainty. Much business has now been transacted; many contracts made in the expectation that the repeal would be immediate. No duty can be in a more unstable position. It has been condemned by a resolution of the House of Commons, by the department which has to levy it, by a Chancellor of the Exchequer, by a Cabinet, by a Bill sent up to the House of Lords. We have hardly a right to keep any great trade in this state. One of the first rules of indirect taxation is that it should be steady, consistent, and calculable. The Excise duty on paper can no longer be so.

Secondly. It is not constitutionally expedient to thrust money on the Executive Government. It is for the Cabinet to calculate what it requires: if it makes an insufficient provision, it does so at its peril. The reputation of financiers depends on the accuracy of their calculations. Public opinion will visit them with a severe condemnation, if they indulge in sanguine calculations unverified by the event. It is scarcely for the House of Commons to give them more than they ask for; still less is it for the House of Lords to give what neither the House of Commons nor the Government deem necessary. We admit that extreme cases may justify such a course, though it must always be anomalous. But we doubt its expediency to preserve a *condemned* duty, which we cannot now regard as a permanent source of revenue. It may often be the duty of Parliament to reject a Budget,—occasionally it may be their duty to alter a Budget,—to refuse to sanction the abandonment of permanent taxes which the Government would surrender. But this power must always be an exceptional power. It should only be used on extreme occasions. We doubt whether it is wise to use it to preserve

a duty which cannot last, which was bad when we thought it durable, and is worse now that we know it to be temporary.

Thirdly. We must take into consideration a source of revenue which is not enough regarded. We have said that we doubt the calculations of increased revenue which are deduced from the increased consumption of articles affected by the present Budget. We do not say we disbelieve them, but we doubt them. On the other hand, however, the indirect revenue derived from all the principal articles on which it is levied is largely increasing, and while the country continues to be prosperous it will go on increasing. We would rather not speculate on this increase until it is realised, but nevertheless it may be borne in mind. The House of Lords is now asked to interfere because our finances are in extreme peril. In estimating the amount of that peril, it is proper to remember that our ordinary revenue is singularly elastic; that it increases year by year with rapidity; that it will enable us to recover the amount we must lose by the repeal of the paper duty within a moderate space of time.

On the whole, therefore, though we regret that the repeal of the paper duty was proposed this year, though we feel that our financial calculations are more speculative and less cautious than we could wish them to be, we cannot recommend the course which Lord Derby would have us take. There are a few singular cases in which so extreme a step would be justifiable, but this is scarcely one of them.

STATESMEN AND NEWSPAPERS.

Mr Horsman's exhortations to Mr Walter on Monday night, and the remarks to which they gave rise, bring before us very forcibly the class of influences for good or for evil which newspapers have begun to exert over statesmen,—the tendency, indeed, of recent English politics to diminish the sense of individual responsibility in statesmen, and to substitute in them some of the least statesmanlike qualities of ably-conducted newspapers. The occasion which Mr Horsman chose for introducing his remarks was not well chosen. The gist, no doubt, of what he intended to say was, that it would be well if managers of newspapers would rather try to take upon themselves some of the defined and individual responsibilities of the old type of statesmen,—if they would attach themselves with the same fixed and constant sense of honour to given causes and principles,—instead of doing so much as they often do to break down the sense of personal responsibility in the statesmen of the day, by inducing them to exchange one attitude for another with all the rapid changes of a variable public opinion. This was, we believe, what Mr Horsman really intended to say; and it was in itself not only excellent, but of the highest practical moment. No one can doubt that the nicety with which our highest class of statesmen adapt themselves to the changes of a public opinion which would often yield before a very little constancy and courage on their part, is a great evil. And no one can doubt that that evil is mainly due to the chameleon-like flexibility with which the public press now takes the colour of the moral and political atmosphere around it. Instead of standing to the last by definite political principles, and looking upon it as a great trust to defend and spread those principles, the fashion of assuming all the privileges of a "mirror" of public opinion is fast becoming the rule of all the principal organs of the press, and is extending from them to the public men. No doubt the press, as a whole, should be the mirror of public opinion; but not any one organ of the press, which ought to select carefully and defend vigorously principles of its own. And so Parliament, as a whole, ought to be the mirror of public opinion; but not any one statesman in Parliament, who, after he has once selected his position, ought to change only when the convictions of his own mind are really and profoundly affected, and not on any external indication, however clear, that the tide of public opinion is setting against him, and that he cannot long hold his post. It often happens that a very little courage and consistency would enable public men to stem and turn this tide, even when it appears thus to set against them; but the fashion of "deferring" to the momentary opinion of the country has laid hold of the most powerful organs of the press, and through them invaded the minds of statesmen. No doubt it would have been far better if the reverse process had taken place,—if newspaper managers had voluntarily assumed something more of the individual loyalty to principle and fine sensitiveness to personal consistency which characterise the highest class of statesmen. And this, no doubt, was what Mr Horsman intended to say.

It was a great mistake, however, to identify so completely the question of responsibility with the question of anonymous writing, and it was a still greater mistake to attempt to fix on one of the proprietors of the *Times* a detailed responsibility for all the opinions expressed by its editor or contributors. It may be conceded that the proprietors of a newspaper are responsible for the selection or dismissal of its responsible editor, but they would find no competent men for such a post at all, if all the subsequent and detailed responsibility were not left entirely in the hands of the men thus chosen. And then as to the question of anonymousness. Few will be found, we suppose, to acquiesence in the very marvellous paradox of the *Times*, that "opinion only becomes responsible "to all intents and purposes, when it becomes anonymous": such a statement could only have been made in order to startle. But though, no doubt, anonymousness does *tend*, often quite unconsciously, to give greater latitude to the pen than would be taken by writers who knew that they were to affix their names, yet almost all reflecting minds have long been convinced that the individual signature of every article in a newspaper is far more objectionable on other accounts than it is desirable on this. Not only would it unduly weight the scale in favour of already celebrated writers,—but it would divert the minds of readers from the neutral and impartial consideration of fact and argument to the consideration of the personal origin and antecedents of the writer's views. The discussion of political questions would become less intellectual, and more mixed up with matters of personal gossip. These evils would, no doubt, far more than outweigh the advantages of personal responsibility for newspaper articles. Still the evil of nominal irresponsibility is not removed or changed into a good. It is still an evil, and an evil to be guarded against. It is still the duty of every newspaper writer to ask himself strictly if he would object to lending the personal guarantee of his name to any of the assertions or inuendoes conveyed in his composition. But it was a great error for Mr Horsman to place remarks which were in themselves important and valuable in so very unsuitable a framework of occasion as that which he selected. To attempt to make Mr Walter responsible for a passing remark of the *Times*, and to appear to regard the anonymous writing of newspapers as anonymous only for the worse class of reasons, was a grave error of judgment, which took away much from the force of what were really very valuable remarks.

But, to leave the erroneous adjuncts, and pass once more to what was excellent in Mr Horsman's letter,—it is of no slight importance to realise the evil of increasing what we may call for brevity the newspaper class of statesmen,—the class, that is, who feel faithfulness to personal convictions to be a duty of the old school,—and think that fresher minds should substitute for it the flexibility that accepts with grace all the varying attitudes of popular thought. There is much of necessary analogy between the career of a successful statesman under a popular Government, and the career of a successful newspaper in the present day of multiplied readers. All we desire is, that the differences,—which ought also to be great,—should not be forgotten. It is worth while to trace the analogies in order to realise better the temptations of popular statesmen. In the first place, neither a statesman in a self-governed country, nor a newspaper in a free country, could gain a footing at all without expressing vigorously the views of a very large number of other people. They are both alike aware that their first successes are gained in consequence of representing the convictions of the many,—and they both alike, therefore, learn early to listen with sympathy,—to open their minds or their columns with ease,—to all which they may hear very frequently asserted in a great many quarters, and with great emphasis of conviction. Neither a successful statesman nor a successful newspaper can easily be stiff-minded. If they do not easily appropriate, they must at least feel genuine respect for, thoughts which seem widely spread and deeply rooted among the majority of their constituents. No doubt it is true that both a statesman and a newspaper, in order to rise to the highest eminence, must go beyond this,—must now and then

be able to *direct* as well as to express the thoughts of those who look to them for guidance,—must organise and shape the wants of those around them so as to inspire a certain practical trust as well as sympathy. But here is the critical part of such a career. In order to do this, it will often be necessary to teach the public to discriminate between wants and feelings between which they have never been accustomed to discriminate,—to oppose them for a time,—and to risk not a little unpopularity in order to do them a great service. When, for instance, the liberal party at the end of the last century resisted the rupture with revolutionary France, when the *Times* persisted in exposing the mismanagement and utter incapacity of the Commissariat in the Crimean war,—in both cases a great risk of immediate unpopularity was incurred in order to take up a sound and substantial position. But it is clear that the newspaper is much less likely to incur these risks than the statesman. There is not the same necessity for a defined course; there is more room for vagueness—and a great deal more room for change. It is, or was, thought scarcely consistent with a statesman's reputation to abandon a line of thought he had long maintained. But with a newspaper a change in the corps of contributors is always possible without any personal inconsistency; and even without this, the impersonal and anonymous character no doubt does much to hide from the public the discreditable side of inconsistency. Hence there is naturally a great deal less disposition to risk unpopularity, and a great deal more tendency to shift with the shifting breath of momentary opinion than is natural with statesmen. With the latter it is certainly an artificial and not a natural moral condition when they accommodate themselves easily to the external changes in the opinion around them. An individual conscience is not made to turn. But the very composite agglomeration of consciences which constitutes the corporate life of a newspaper is susceptible of a good many variations which consist only in relative changes among the various individual parts, and does not necessarily demand a sacrifice of principle in any one contributor.

Hence the newspaper is naturally far more susceptible of change than even a popular statesman; its characteristic danger is a too great susceptibility, which often leads to absolute purposelessness. And we agree with Mr Horsman that it would be far more conducive to public honour and credit, if the conductors of the English press would, to some extent, assume some of the individual sense of responsibility and consistency which ought to characterise statesmen, than if the opposite change were to take place. The daily study of able organs of the press which veer with every breath of opinion cannot but do something to break down the sense of personal responsibility in our public men; and if they change their attitude with almost every change of Ministry, we cannot but ascribe much of the blame to the unscrupulous fitfulness of the great organs of English opinion.

LORD GRANVILLE ON THE LONDON UNIVERSITY REPRESENTATION.

We have long and steadily advocated the enfranchisement of the University of London and of the Scotch Universities on the broad ground that the liberal culture of the country has as yet no recognised political expression. It is most essential in the interests of English politics that we should see how far the higher culture of men, brought up for the most part outside the pale of the Established Church, and therefore but little disposed to concur in the mere traditions of authority cherished by that Church, may yield a similar, and how far a dissimilar result, as regards political convictions, from the culture of Oxford and Cambridge. We have often pointed out that the elder Universities have unduly connected the reputation for learning with the reputation for conservatism,—and that the liberal Universities are in a position to give a far truer report of the most *natural* politics of highly cultivated men than those which are, by manifold historical, traditional, and social ties, pre-engaged in the interests of the established system.

Holding these views, we can with full consistency, therefore, echo the wish expressed by Lord Granville, the Chancellor of the London University, at its session last Wednesday, that in their first choice of a representative,—if the right offered by the Reform Bill should ultimately be attained,—the graduates might remember, besides the natural political tests which, as a matter of course, they would apply to any candidate, that that which in a University constituency corresponds to the *local* interests of a county or borough are the interests of literature and science. It will not be enough for the University to select for their representative a man, however able, whose chief recommendation is his political creed; by so doing, they would throw away the opportunity, now for the first time offered them, of marking their sense of the value of true University culture, as well as their conviction of its legitimate political fruits. They ought to select a man who would be, in the first place, highly qualified to represent literature and science as such; and, in the second, qualified also to represent the faith in political freedom with which the interests of literature and science are so closely bound up.

We believe it is no secret that two not very suitable candidates are now actually in the field, while the name of a third, who is not yet in the field, has been found in the highest degree acceptable to a large number of the graduates. Sir C. Locock has avowedly been brought forward as a supporter of the Conservative party in the House, and we need not say that a supporter of Lord Derby cannot expect to win the suffrages of the University of London. Indeed, apart from the professional bias which will induce no doubt some of the medical graduates to support that eminent accoucheur, we are not aware that Sir C. Locock has any claim on men either of science or literature, as such. The other candidate who is already in the field is himself a graduate, as well as a man of ability, whose services to the graduates in the uphill fight by which they have at length attained the right to take part in the government of the University, have been very great,—services which have already procured him the honourable post of Chairman of Convocation; we mean Dr Foster. Unfortunately, however, his general politics are somewhat of an extreme cast, and his political connections are not such as would be at all desirable in the representative of the University of London, who certainly ought to be absolutely independent of all external influences. He is known to be the salaried officer of the Society for the Liberation of Religion from State Patronage and Control, and has, no doubt, influenced many an election by the pressure which, as the officer of that Society, he has brought to bear upon liberal candidates on the hustings. Such a man, however able, is not in a position to represent fitly a University constituency. The trammels of his other political connections would inevitably identify him with a well-defined and narrow party in the House,—and the political convictions and wishes of the London University graduates would be confused, if not merged, in his person, with the convictions of the more vehement dissenting sects. Moreover, Dr Foster's pursuits and interests have always, we believe, been more closely associated with political than with literary and scientific aims, and he would assuredly bring to the University none of the reputation of literary scholarship, scientific attainments, or purely intellectual gifts. That he is a man of vigour, sincerity, and ability, we have admitted. His recent evidence before a Parliamentary Committee on Church Rates shows that he can face with courageous consistency all the legitimate consequences of an abstract theory. His faith in the voluntary principle is, we believe, carried to the point of wishing to see all the property of the Church secularised, and all the educational grants of the Government ultimately withdrawn—the grant to the University of London of course being included. Such a man would represent, not the liberal culture of the country, but the keenest prejudices of dissenters. And we should esteem it a great misfortune if, by any misunderstanding or division in the liberal ranks, Dr Foster should be selected to represent the University of London in the House of Commons.

There is a third proposition now before the graduates, which would, we think, adequately fulfil the conditions laid down by Lord Granville on Wednesday last. It is the wish of a large number of the graduates to prevail on the Master of the Rolls to offer himself to their suffrages,—and should the requisition be widely enough signed to give every probability of success, there is some reason to hope that they may be successful. Sir John Romilly would command a position for the young constituency which neither Sir Charles Locock nor Dr Foster could pretend to give it. The name of Romilly is the best pledge the University of London could have for the truly

catholic spirit of his political principles; and the Roman Catholics, at least, have but lately had a proof of the fidelity with which he carries out these principles in action. The unjustly impeached and yet unimpeachable appointment which he recently made in the State Record Office, reminds us at once of his loyalty to the principle of toleration, and of his great services to English historical literature in inaugurating the publication of a most valuable series of State documents. If, however, the graduates of the University of London should not be able to persuade Sir John Romilly to lend his name to the still embryo constituency, we earnestly trust that some other man will be found who, while vindicating, in the name of the University, the natural bond which subsists between true culture and true liberty, will yet be identified with no narrow or sectional party either in Church or State. Before all things, let its representative be a man who, either in connection with literature, science, or abstract thought, will command respect for his University culture; and, next, let him represent that moderate type of liberal politics which is as averse to democracy on the one side, as it is to oligarchy on the other.

THE NEW BANKRUPTCY BILL.

We have received the following letter with respect to the portion of the Bankruptcy Bill introduced into the House of Commons by Sir R. Bethell, to which we lately called the attention of our readers:—

TO THE EDITOR OF THE ECONOMIST.

Sir,—Are you or your readers aware that Sir Richard Bethell proposes by his Bankruptcy Bill practically to abolish all deeds of composition and arrangement between a debtor and his creditors, and to leave the Court of Bankruptcy as the one and alone way in which an insolvent estate can be wound up? If his Bill shall become law, this will be the effect of the 400th and 404th clauses of the Bill, as amended in Committee; for of these the first renders void every such deed or agreement unless it be registered, and the latter, on registration, turns the trustees into assignees and brings the estate within the operation of the Court, in the same manner as if the debtor had been adjudged a bankrupt.

The words of the first of these clauses are these:—"No deed, instrument, or agreement by which a debtor conveys, or covenants or agrees to convey his estate and effects, or the principal part thereof, for the benefit of the creditors, or makes any arrangement or agreement with his creditors, or any person on their behalf touching the distribution, inspection, conduct, management, or winding-up of his affairs or estate, and the release or discharge of such debtor from debts or liabilities, shall be valid or good in law, unless the same shall, within twenty-one days from and after the execution thereof by such debtor, be registered in the Court of Bankruptcy in manner herein directed."

The 404th clause enacts that on the registration of such deed or instrument, "the debtor and creditors and trustees, parties to such deed, or who have assented thereto, or are bound thereby, shall, in all matters relating to the estate and effects of such debtor, be subject to the jurisdiction of the Court of Bankruptcy, and shall respectively have the benefit of and be liable to all the provisions of this Act, in the same or like manner as if the debtor had been adjudged a bankrupt, and the creditors had proved, and the trustees had been appointed creditors' assignees under such bankruptcy."

Now, no one feels more strongly than I do the evils that at present exist under the shelter of these arrangements and compositions; but, at the same time, I am not prepared, and I believe the public in general are not prepared, to give up the right and the power of entering into them. As things now stand, they are generally better than a bankruptcy; and are we so sure that everything will be cheap and pleasant in Sir Richard Bethell's new Court as to make us give up the right of private arrangement? If the Court works well, such arrangements will not be resorted to; but if ill, what then? It will be awkward to find ourselves absolutely debarred from the only avenue by which we may escape from the Court, and bound, *nolens volens*, to drag every estate through it.

I greatly doubt, on general principles, such an interference with the liberty of contract as that proposed by Sir Richard Bethell. I doubt the expediency of attempting to abolish and declare utterly void so large a class of mercantile contracts as those specified in the 400th section, which in themselves may be perfectly free from objection, untainted with fraud, and binding in conscience. Be it further remembered, that though the clause only professes to avoid such deeds as are not registered, yet it does in fact put an end to all private arrangements whatsoever; for, on registration, as I have shown, the arrangement ceases to be a private convention, and is turned into a bankruptcy.

I am greatly mistaken if this enactment will not lead to much doubt and uncertainty, and therefore litigation. Will these arrangements be void, or voidable only? Will they be void for all purposes whatsoever, or only for some? What are the exact limits of the deeds comprised within the section? What is "the principal part of a man's estate," and, more important still, what is the meaning of the expressions, "the creditors," and "his creditors"? Do they mean all, and apply only where the deed includes every one, or do they mean some or all, *i.e.*, any one or more of them? The clause ought at any rate to be somewhat more precise in its wording than now it is; but I think it wrong as a whole, and hope it will be expunged.

I have read the article in the Economist of April 28th, and I agree with it in approving of the facilities given for arrangement after bankruptcy. If there is to be this freedom after bankruptcy, why should the Bill improve their restraints on arrangements before that event?

I admit the evils of these deeds of arrangement and composition, and yet I object to their proposed abolition. It may well be asked what remedy do I propose. I propose that which, after a careful consideration of the subject, was inserted in Lord John Russell's Bill, namely,—first, a permissive, not compulsory, registration of composition deeds at the instance of any person interested; and secondly, thereupon investing the Courts of Bankruptcy with power to interfere in respect of any particular matter of fraud, breach of trust, or improper procedure requiring the aid of a Court, without compelling the estate to be entirely administered by the Court,—in fact, giving the Court a power of correction, not of administration. Such a permissive registration and such a corrective jurisdiction are, in my opinion, far more germane both to our habits of thoughts and practice and to sound jurisprudence, than the wholesale interference with mercantile contracts proposed by the Attorney-General.—I am, Sir, your obedient servant, E. D.

We do not agree with our correspondent in the interpretation which he gives to the Bill, though his quotation of two of the clauses is correct. The Bill requires that all deeds of arrangement shall be *registered* in bankruptcy; but this is a very different thing from leaving the "Court of Bankruptcy "the one and alone way in which an insolvent estate can be "wound up." The latter part of the 404th clause, which our correspondent has not quoted, shows this,—for it provides that, "*except where the deed shall expressly provide otherwise*, "the Court shall determine all questions arising under the "deed according to the law and practice in bankruptcy *so "far as they may be applicable.*" As we read the Bill, the insolvent would not be *Gazetted* a bankrupt in consequence of any such deed of arrangement as it contemplates. An insolvent, therefore, will continue, as at present, to have the alternative of arranging with his creditors or of becoming a bankrupt.

The second point which our correspondent raises, viz, the expediency of this compulsory registration, does not seem to be very material. We wish creditors to be able to manage what is really *their* estate for themselves; we wish them to have easy access to the Court of Bankruptcy for the decision of controverted questions; we wish them to be guided by the law of bankruptcy in the division of the estate, for that law is probably likely to be right in such matters—is, at any rate, the best attainable guide. Whether or not the the deed of arrangement be or be not registered, is, we believe, a very secondary question.

THE BEST WAY OF CONTRACTING LOANS BY THE STATE.

We have received the following letter:—

"In the *Times* of the 18th April there is a leader on Indian Finance, in which occurs the following passage:—"We have frequently had to observe on the folly of open loans, and on the practice of borrowing continually at higher and higher rates of interest, instead of borrowing at a fixed interest, and leaving the sum borrowed to be determined by the amount tendered to purchase the annuity which was offered in exchange." In reference to the above, a Yorkshire subscriber begs to ask the opinion of the Economist as to the relative advantages to a Government of the two modes of borrowing, as to him the best plan would appear to be that the Government should actually receive the full amount of principal of any obligation contracted. Government might, thereby, generally be paying a *nominally* higher rate of interest, but the principal of the debt would be less; and, as the loans are redeemable, there would be more frequently, in times of ease, an opportunity of reducing the rate of interest or annual charge."

There is no doubt of the abstract correctness of the remark made by our correspondent. At first sight every one would agree that a Government, like an individual, had better obtain 100*l* for every 100*l* of debt he incurs, and pay whatever interest may be necessary to obtain it. In practice, however, there are other circumstances which render it inexpedient to act strictly on this principle.

Under the system of funding, Government debts are saleable commodities; and it is of great consequence that they should be of the most saleable kind. If the Government borrow in an unmarketable stock, it will borrow on unfavourable terms. The rate of interest is not the only circumstance which regulates the amount a Government can obtain for each 100*l* of debt which it incurs. For example: in England it will always be cheaper to borrow in Consols than in any other stock, because Consols are the largest stock now existing,—are more largely dealt in on the Stock Exchange,—are the favourite commodity there. The terms on which a Government loan should be contracted are, therefore, in every case a delicate matter of practical discretion.

PLURALITY OF VOTES.—ROYAL COMMISSION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Reform Bill is not to be withdrawn by the Government for completion. The half which is wanting—securities for the equal distribution of political power—must therefore be supplied by the amendments of non-official members. The time for discussing suggestions is now come; and the subject is so serious that I venture to trespass on your indulgence with a few more words.

The arrangement which I propose is this: that every occupier of a house rated at 10*l* a year or under should be entitled to one vote in the election of members of Parliament; that for every additional 10*l* of value an additional vote should be allotted; and that every occupier of a house of 60*l* a year and upwards should receive the maximum of six votes. I have taken for the starting point the present 10*l* franchise. This figure is a matter of detail, and can be altered without interfering with the substance of the proposal.

I would add two further conditions: that each elector should be allowed to vote for one candidate only; and that boroughs should be divided into wards, each returning one member, as recommended by Mr Massey. I cannot, however, at present enter into the examination of these and some auxiliary propositions.

The method of plural voting is now successfully at work in the election of select vestries and of poor law guardians; and it is so eminently the central point towards which the practical intelligence and experience of modern times gravitate, that it is now applied, universally I believe, to all new joint stock companies. Owners of single shares obtain one vote: those who possess a larger number receive additional votes progressively up to a maximum of six votes. No proprietor is excluded from voting, but all proprietors do not exercise the same power in voting.

The scheme, then, is practical and successful. It is not only in harmony with existing institutions, but actually suggested by them. It supplies the precise thing which is wanted,—a counterpoise to the preponderating numbers of the classes to be enfranchised. It promises a permanent settlement of Reform, because it possesses the highest of all political merits, and the sole guarantee of stability, justice. Its aim is not to confer privileges, but to convert a natural inequality into a fair and even-handed apportionment. What, therefore, prevents its adoption?

It will not be listened to, people exclaim. But who are they who will not listen to it? Not the present constituencies. They cannot desire their voluntary offer to share political power with the non-electors to be made the means, by the mere force of numbers, of their own disfranchisement. None are so interested as they in providing sufficient securities; for if they surrender the election of members to new classes, they convict themselves of guilt for the past, and incapacity for the future. Nor the working classes themselves; for their dispassionate and respectful attitude demonstrates beyond dispute that they seek, not the monopoly of the government of the State, but a reasonable concession of legitimate claims.

Those who will not hear belong chiefly to two classes. Those who manage the present system of elections, the members chosen, their agents, the political organisations in each borough, naturally dislike the introduction of new machinery. It alarms their imaginations. They do not know what its effects will be; how their influence will be affected by it. They know their position under existing arrangements; they can calculate and prepare results. A new method imposes on them the trouble of thinking; and, what is yet worse, leaves them uncertain as to its consequences.

This is the class whose resistance is most formidable; they are the men who most readily throw out the objection that the proposal is new, or too late. Many, no doubt, under these assertions, disguise a secret wish to oppose Reform. It is idle to address to such men arguments in favour of plurality of votes, or any other mode of carrying out a reform which they hope to get rid of entirely. It is for them to weigh the significance of a Reform Bill reaching an unopposed second reading, and the magnitude of the force which has effected this. I turn to those who know that reform is inevitable, and beg to remind them that, if a change in the constitution must come, to provide no preparation for it by forethought, to make no deliberate choice beforehand of the form to be given to it, is to incur the extremity of danger and of folly. It is the surest method of allowing chance and ignorance, and a few strong but ill-guided wills to have their way. If mischief were wished for, there would be no more effectual means of accomplishing it.

But there is a smaller, but more consistent and resolute class, who stop their ears against plurality of votes or any other check on the sway of numbers. These are the leaders of the democracy in the press and on the platform,—men who know well what their object is, and spare neither thought nor labour to attain it. Their ultimate end is precisely that which these counterpoises are intended to defeat—the uncontrolled rule of the multitude. They are aware that the most certain way of pushing aside a good measure is to prevent it from being taken into consideration. They denounce it at once as a thing not to be spoken of: we will not have it, they cry. But is it so? Are matters brought to that pass that the demands of the suitors alone, and not the voice of the judge, are to be heard? Has the decision of the form of government England is to have been removed from the House of Commons and the social forces it represents, and been made over to workmen and artisans, or rather to a few orators and newspaper editors who impudently profess to speak in their name? Nothing is left, it seems, but to capitulate; but where is the breach, and where are the storming columns whose irresistible assault is at hand? Where are the men who assure us, that if plurality of votes is enacted, they will raise disorder, riot, and civil war?

Nothing is more astonishing than the ever-renewed credulity with which the assumption of demagogues is accepted, that they represent the feelings and the wishes of the masses. It is the incapacity of the upper classes to perceive this falsehood, and their cowardice or inertness in resisting it, which gives success to revolutions. There is not the scantiest foundation for the notion that the unrepresented classes would resent any restriction on the franchise which was shown to be moderate and just; yet the democratic leaders are believed and feared, when they assert that the very mention of conditions would be repudiated by rebellion.

But how is it right, we are asked, that one man should have more votes than another? Because such, I answer, is the spirit of the constitution and the teaching of nature. In my former letter I showed how unequal efficacy of votes,—that is, of political power,—pervaded every part of our institutions. Let me add one illustration more. London sends four members to Parliament, and many counties three. Every citizen of London is directly represented by four men, and can positively influence four votes in Parliament. What is this but plurality of votes, and a really larger power than six electoral votes restricted to a single member?

Inequality is the law of society and of human nature. Every man differs from another in some natural or acquired talent; and civilisation is only the result of the wise employment of each member of society in the function for which he has a special capacity. Who ever speaks of a soldier having an equal right of voting, that is, of deciding with a general, a layman with a judge, a peasant with a carpenter? Who has ever said that every man is as fit as another to be a member of Parliament? Political socialism is as false and unnatural as the socialism which demands that every man should receive an equal share of the fruits of labour.

But, it is answered, that even if the educated alone are fit to legislate, every man has equal capacity to select a representative. This assertion is as untrue, as that every man is alike capable of selecting a good ploughman. An honest, right-minded, and enlightened representative is a man difficult to discover. It requires considerable mental attainments to discern him. Parliament may be dissolved upon a Coercion Bill, a Chinese war, or a Treaty: is it pretended that every elector is equally competent to form an opinion on such questions? The ballot is vehemently demanded by the democracy: what is this but an admission that certain electors need protection against intimidation or influence?—that they are wanting in the capital point of independence? Fitness for the required function is the universal law of human life; and fitness to discern a good representative, and to vote for him, when discovered, manifestly does not exist in equal degrees in every elector.

The notion of equal natural rights is absurd. Political rights, like the political institutions on which they depend, are all arbitrary. There is no such thing as a universal and inherent political right. All men are entitled to justice and good government, but the machinery for obtaining these great results varies with each kind of political government. The theory of the English constitution is the equal representation of every important interest, not that of persons, nor even of classes. Throughout it repudiates equality of political power for individuals.

But why should a rich man have more votes than a poor man? Why confer an invidious privilege on property? These questions spring from confusion of thought. It is expedient to give a large individual influence to the members of the upper classes, not as a reward or a privilege, but because they are fewer in numbers, and because it is of the highest importance to the common welfare that the qualities associated with property should wield as great a power in the State as those belonging to the other classes. An equal distribution of electoral efficacy to individual electors would render the attainment of this object impossible. Property implies independence, leisure, education, general and professional know-

ledge, love of order, diminished excitability. It is neither a wrong nor a reproach to a poor man that he does not possess as many votes as his richer neighbour. As an artisan, he may be greatly his superior in particular skill; as an elector, he is less able to judge political questions and qualities. There is no elector so poor as to be incapable of understanding that a low franchise and equal votes would put the election of members of Parliament into the hands of men as poor as himself, and that the result would be that he would be represented by an inferior member and governed by worse laws. It is not, as some have insinuated, that the rich man has a natural right to govern, because he has a larger stake in the country, or that his small earnings are not as valuable to the poor man as his broad estate is to the squire; but the fact in nature and reason is this, that the influence of the personal and material qualities attached to property are essential to the preservation of society, and that these qualities would be annihilated by the unrestricted majority of the numbers of the lower classes in political elections.

One suggestion in conclusion. It is obvious that a well-considered and complete Reform Bill cannot spring up within the House of Commons itself. The usual and constitutional practice has been that a Reform Bill should be framed and proposed by the Government when some urgent political necessity called for reforming action. It is the peculiarity of the present time that the movement has taken its rise in a general feeling of the duty and the expediency of an extension of the franchise. A rule has to be laid down, calmly and deliberately, for the future development of the constitution. On the other hand, a Government is so mixed up with the party and personal interests of the day, as to be scarcely capable of that impartiality and breadth of view which are required for the discharge of this great duty. Recourse must be had to the intellectual resources and the broadest political experience of the whole nation. No machinery is so well adapted to elicit and weigh the counsels of those who are best qualified to advise as a Royal Commission; and I conclude with the expression of an earnest hope that such a body may be charged with this highest of duties, to consider and recommend what is the enlargement of the franchise and the conditions of its exercise which are best suited to the spirit of the constitution, and most calculated to promote the equal and justly-apportioned prosperity of the whole community.—I remain, Sir, your obedient servant, BONAMY PRICE.

Athenæum, May 9, 1860.

PLURAL VOTING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There would seem to be two objections to Mr Sturges Bourne's plan for the representation of the people in Parliament, so powerfully advocated in your number of the 5th inst. by Mr Bonamy Price.

These are—First, that there is no reason why the classes who pay poor rates should have more political power than those who do not; the shipowner, the merchant, or the railway proprietor is as likely to make a wise use of the suffrage as the millowner or shopkeeper.

The second is, that it is unwise to base the franchise upon rates, which many hold, with William von Humboldt, Bastiat, Chalmers, and Herbert Spencer, to be condemned by the sound principles of political economy. Should the Poor Laws be abolished, what would become of the franchise on Sturges Bourne's principle?

These objections would be entirely obviated by making the number of votes depend, not on the amount of a man's poor rates, but on the rent of his dwelling-house; thus, let all householders paying a rent of 10*l* and under have one vote; between 10*l* and 25*l*, two votes; between 25*l* and 50*l*, three votes; between 50*l* and 100*l*, four votes; and above 100*l*, five votes.

The taxes a man pays, his education and intelligence, his anxiety "*ne quid detrimenti respublica capiat*," are all more or less in proportion to his income:—why, then, should not the rent of his dwelling-house, which it will be generally admitted is the best available criterion of his income (see Mill's "Principles of Political Economy"), determine the number of votes he should have in electing a representative to Parliament, in the same way as the number of votes of a shareholder in a railway company depends on the amount of his stock?

There is, perhaps, no novelty in these suggestions, but the alarm so generally felt lest the measure now before Parliament should pave the way to mere mob-rule, renders the intelligent portion of the public less inclined to reject plans for balancing the numerical preponderance of the working classes, merely because they are untried, than they have hitherto been.—I am, Sir, your obedient servant, J. C.

Agriculture.

AGRICULTURAL DIPLOMAS.

GOVERNMENT MODEL FARMING.

CERTAIN it is that agriculture when petted or patronised has never shown any very satisfactory results, but when left to its own unimpeded efforts it invariably prospers. The Royal Agricultural College at Cirencester, which was established to give a higher agricultural training to farmers' sons than they had previously the opportunity of obtaining, was found to be unsuited to the class for whose benefit it was intended, so that the last person to be sought for amongst the pupils has always been a farmer's son.

Again a charter has been bestowed on the Highland and Agricultural Society, authorising the formation of a Board of its governing body empowered to examine candidates for and to grant "agricultural diplomas." What has been the result of this ambitious attempt to promote "agricultural education"? Why, at the last examination Board held a few weeks ago, one candidate, and one only, presented himself, and that one a young man who had been rejected last year, but who now received his diploma. We believe not more than two or three other diplomas have been conferred under the charter, and that of this year will probably be the last. In truth, the art of husbandry is not one in which merely honorary degrees can be regarded as of any practical utility. It is a business requiring energy and capital more than scientific attainments, although, as in other things, the man who, to natural sagacity and capital, adds scientific knowledge, will find occasional advantages unattained by his less-educated brother farmers. As a class, however, farmers will not seek for these "degrees," nor would they find them of much value if they got them. This is not the direction the agricultural mind should take. The farming classes want emancipation from a sort of pseudo-feudalism, which hangs about all engagements between landlords and tenant-farmers, and prevents the application to husbandry of the knowledge already possessed by farmers, and still more interferes with the application of capital to husbandry. Neither has English or Irish farming profited much by model farms, to which farmers are told to look for instruction. Thus Mr Mechi has always excited rural antagonism by daring to assert he makes a profit by farming, which, as we read his figures, seems to be nothing very extraordinary for the amount of capital employed on land highly improved; and he has proved more of a bugbear than an example to the farming world.

Again, in Ireland, model farms have been established under the management of the Commissioners of Public Works, as a department of the National Board of Education, and certainly the results look more like warnings against Government farming than examples to instruct the Irish farmers. The *Financial Reformer* publishes the following tabular results of an analysis of the accounts contained in the *Irish Farmer's Gazette*:—

	Expenditure.	Receipts.	Balance against Farm.	Loss per Statute Acre.

Limerick — — —			692 13 0	
Munster — — —			3,541 14 0	
			19,268 8 5	

To this it is stated 1,101*l* 11s 5d for repairing, &c., at Glasnevin, must be added, making a total expenditure of 20,369*l* 19s 10d spent in teaching farming to gentlemen's and farmers' sons. Surely this is not the proper business of the public departments of this country. The emigration which has for some years been going on from Ireland will gradually clear the way for the introduction of better systems of farming than formerly prevailed there; but the mode in which that is to be accomplished must be left to private capital and individual enterprise.

AGRICULTURAL NOTES AND QUERIES.

AT length we seem to have arrived at the season of spring. The weather has now since the 7th of May become seasonable, some rain has fallen, and our crops, which are certainly from a fortnight to four weeks later than usual, are showing signs of improvement. The past winter has been one of the most remarkable on record. Beginning in the middle of October it continued down to the 25th of April, when there was snow in most parts of the country, and

in some districts a good deal of it. The wheat has suffered most, but still if henceforth we have a mild month or six weeks with a fair share of rain, there will not be the amount of deficiency which has been apprehended. There is a short breadth of wheat sown, and the period of the year is too late for the growing crops to increase much by tillering, so that the chances are that with fine weather the quantity of wheat next harvest will not be more than an average one, while should the rest of the season prove unfavourable, we may, and probably shall, have a short supply of home-grown wheat.

The prospects for spring corn are better. On all except the wet soils the seed has been sown in a good seed-bed, and for the most part has sprung up vigorously, while, from the long continued dry weather since March, every piece of land intended for spring corn or pulse has been sown, and generally in good order. With fine weather during the remainder of May and June, there will probably be good crops of barley and oats. The great source of trouble and anxiety to farmers for the last two months has been the want of provender for their sheep and cattle. In the North of England and Scotland, hay has sold for 8*l* and 10*l*, and even more per ton. Roots everywhere are nearly consumed, and but for the largely increased growth of mangold wurtzel which has taken place of late years, the live stock of the country could scarcely have been kept alive. In some districts the loss of ewes and lambs have been considerable. Indeed, taken as a whole, the past winter has been the most trying English farmers of this generation have experienced. Still we hear none of the cries of distress which formerly issued from the "agricultural interest" whenever any untoward circumstances affected the business of husbandry, or the prices of rural produce. On the contrary, all classes of farmers are deriving useful lessons from the events of the past season, and the better classes of the farming body are attending more narrowly than of late to the terms of their farm-contracts, and the overbearing influence exerted by the landowners in matters relating to the agriculture of the country.

We noticed last week the fact of the new and unopposed member for Berkshire finding it prudent to make an "explanation" on the subject of his own game preservation; and in the *Mark lane Express* for the present week we find a distinct complaint of increase and increasing preponderance of the landlord element in the Council of the Royal Agricultural Society, of which all who have come in contact with our leading farmers must for some time past have heard murmurs and mutterings. The recent elections of Secretary and Editor of the Society's Journal have been made through the influence of the landlord element in the Council, and in opposition to that of the farmers and practical agriculturists. At the same time a sort of grudging and partial compliance with the demand made for greater publicity of the proceedings of the Council has been conceded, in the recommendation "that the Secretary prepare notes of the business transacted at the monthly councils, the principal grounds of the decisions arrived at, with the numbers of the majority and minority in each case, and should furnish the newspaper press with a report of the proceedings as soon as practicable after the rising of the Council, and that the substance of reports received and adopted by the Council should also be given; and where any written paper is read or laid before the Council, which is of too great length for immediate insertion in the proceedings, it shall be referred to the editor to report upon at the following weekly council." Is not this very like an Agricultural Court Circular, from which anything which might ruffle the majority of the Council is carefully excluded? The Council also, at the same meeting on the 2nd of May, "arranged an election list, to be recommended by them for the adoption of the ensuing general meeting." Hereupon the *Mark Lane Express*, giving expression to the sentiments of the leading farmers who interest themselves in the affairs of the Society, says:—"The House list shows the names of these [the third of the Council who go out by rotation] with their attendances for the last two years, and it is then determined who shall be re-elected, and who shall take the places of those it is agreed to pass over. Five are this spring to be drafted, and in their stead we have Mr Joseph Druce to succeed his father, Mr Hutton *vice* Mr Huskisson, and then one Duke, one Earl, and one Right Honourable. Of course there is a good deal of battling over such a selection; but it is getting more and more one way"; while several eminent and practical farmers who were duly proposed for the vacancies, "had no chance against their noble opponents. In a Council of seventy-five, there are at present thirteen *bona fide* farmers, three implement makers, an engineer, a chemist, a seedsman, and a professor. These in all reach to just twenty, while the remaining fifty-five lords and commoners represent the landlord interest. Still, even as it is, the latter would seem to be scarcely strong enough; and on the 22nd instant their ranks are to be maintained by three to two. And yet how many years is it since the late Lord Spencer, as President, gave his casting vote in favour of a farmer, because he found on examination the two classes were not quite balanced on the list? But now the tenants are clearly less and less wanted, and when one of their order brings forward a motion, it is merely as a forlorn hope, and to satisfy his own conscience by having done his duty. .....We fear that the business of an agricultural society is fast passing out of the hands of the agriculturists themselves."

Though these complaints have not, perhaps, been put before the public in quite so definite a form as in the above extract, they are by no means novel, for year by year the tone and guidance of the Society have become less and less satisfactory to the practical agriculturist, whether of the Council or merely a member. But is not this bias towards the landlord interest the natural and almost necessary result of the actual relations of the landlord and tennant-farmer classes in England? Can it be redressed by any action on the part of agricultural members of the Society? Must not the Society take the form and colour of that complex system, the English "agricultural interest," wherein the landlords exercise the lion's share of influence, not unfrequently greatly to the detriment of their own as well as their tenants' interests?

This is certain, that if the Royal Agricultural Society is to exercise any permanent and substantial influence on the agriculture of England, it must be largely guided and controlled by real and practical agriculturists. Otherwise it will become a mere dilletanti society, offering once a year to some one of our rural districts a pretty spectacle and a pleasant holiday. But it is capable of, and ought to, do far better things.

Literature.

CEYLON: An Account of the Island, Physical, Historical, and Topographical; with Notices of its Natural History, Antiquities, and Productions. By Sir JAMES EMERSON TENNENT, K.C.S., LL.D. Fourth Edition thoroughly revised. Longman, Green, Longman, and Roberts.

(FIRST NOTICE.)

THE call for four editions in quick succession of a work so learned and conscientious, scholarlike and thorough, at once so wide and exhaustive in its scope, and so accurately and even minutely careful in its execution, as Sir James Emerson Tennent's valuable work on Ceylon, is creditable to the public taste and judgment. It proves that we are not yet wholly given up to the habit of fragmentary reading, the growing prevalence of which is attested by the unprecedented number and excellence of our periodicals:—a habit which, if indulged, saps the energies of the mind, and is destructive of all sound culture. "Small books on great subjects" are too much the fashion of the times. Such books may be good of their kind, they may convey much information in an easy and pleasant manner, and in brief compass; but knowledge made easy is not after all of much use; it never becomes properly our own, but hangs loosely about our minds, and amounts frequently to little more in the end than a vague consciousness that we once read something somewhere, but forget what or where.

Sir Emerson Tennent's volumes are of a different calibre. They are not small, nor do they offer to an idle reader a ready-made dish for his easy digestion. They must be read carefully if their full value is to be known; yet we venture to say that no one who has once fairly entered upon their persual will willingly leave them unfinished, or think them too voluminous or too minute. The exertion, if exertion it be, of reading steadily through even the drier chapters will be amply repaid by the completeness they lend to the whole, and by the unexpected and most amusing incidents in which they are not wanting. The chapters, for example, on the early Singhalese Chronicles, and on the Mediæval History of the Island, are not exactly easy reading, in spite of the evident pains their writer has taken to bring them within compass and to give them a more general interest; yet, apart from their value in casting light upon the present condition of the island, they are in themselves highly curious, as gathered from the ancient authentic records—reaching back into the seventh century before Christ—of a peculiar race, numerous and industrious, cultivating their lands to a high pitch by means of reservoirs constructed with vast labour and considerable skill, arguing in their builders a population and an advance in mechanical arts scarcely inferior to that of the ancient Egyptians, governed like them by a powerful monarchy and priesthood, in a country where now a scattered and inert people leave the tilling of their lands to foreign emigrants, and subsist themselves on the all but spontaneous productions of their fertile soil. They are only just beginning slowly to respond to the stimulants and inducements to industry held out to them by their British rulers.

Ceylon has been in all ages, and among most nations, a fertile theme of romance. More "travellers tales" of gigantic dimensions have been told respecting it than probably any other land. It served for a long time as a convenient region on the borders of the unknown world where the kindled imaginations of early travellers could find a "local habitation" for those prodigies in whose existence they firmly believed, but which refused to be realised in more fully explored countries. As the Taprobane of the Greeks, the Serendib of the Arabians, the Lanka of the Hindoos, it has had under each appellation its mystic traditions and reputed marvels. Its size was indefinitely enlarged; and Marco Polo, when the exaggeration of the ancient accounts became apparent to him, had no other resource than to swallow up one-half of the island by an inundation of the sea. Yet marvellous as Ceylon appeared to the ancients, we doubt if modern researches have much diminished, if they have changed the character of, its wonders. The real marvel

of nature in this lovely island are more beautiful, and almost as strange, as the old fables built up by fancy out of half knowledge. Sir Emerson Tennent speaks of the "glad surprise" awakened by the sight of the scenery in Ceylon. Something of the same feeling stirs in us as we read his descriptions, thus showing how faithfully he has done his part in reproducing nature. When we read of fishes travelling along dusty roads under a noonday sun,—of dried up ponds, where not a trace of piscine life was to be seen, swarming with struggling fish after a sudden shower, so that men take them with ease in inverted baskets,—of crocodiles disturbing the traveller's sleep by appearing through the mud floor of his tent,—of a tree which provides food, and fuel, light, and warmth, covering, and tools, so that a family can live upon its produce alone,—of elephants performing wonders of sagacity,—and of earth-worms two feet long, whose worm-casts are as large as mole-hills,—we seem to have wandered back into the age of fables, and almost expect to come at the next turning of the page upon the rhinoceros bearing the elephant aloft transfixed upon his horn, till blinded with his blood and fat he falls, and both—wonderful to relate—are picked up and carried off by the gigantic roc:—not that we would cast the slightest doubt upon the strict veracity of the book before us (*that* is apparent in every page), but that the realities of life are sometimes wilder than its dreams,—truth stranger than fiction.

It was stated among the many theories current in former times about Ceylon, that it had not always been an island, but was separated from the mainland of India by some volcanic disruption, which at the same time submerged a large portion of its surface. The near approach of the island at its North-Western extremity to the peninsula of Hindostan, and the existence of a long low-lying reef of rocks stretching between the two, probably gave rise to this idea; and to the accompanying tradition that Adam, after his expulsion from Eden, being driven into an expiatory exile on some mountain in India before his reunion with Eve upon Mount Arafath, crossed over to Ceylon by this reef—hence called Adam's Bridge—and took up his abode on the highest mountain of the inland range—"Adam's Peak"—where his foot-mark is still shown as a proof of the truth of the tradition, and held in respectful reverence by all true believers. The reef called after this legend is now proved to be of later origin then the rest of the island. So far from being the remains of a submerged communication with the continent, it is the effect of the accretion of sand upon beds of coral upheaved in the gradual elevation of the Northern shore. Sir Emerson Tennent, in his remarks upon this interesting natural phenomena, points out the advantage that would be derived from widening the one channel by which this reef can be passed. Vessels sailing from Bombay to Madras, or *vice versâ*, would save more than half their distance if this passage, now admitting vessels drawing ten feet of water, were deepened and enlarged to meet the requirements of commerce.

Before the rising of the Northern shore had added greatly to the length of the island, Ceylon is supposed to have been almost circular. It is now 271½ miles long by 137½ broad, and covers an area about one-sixth less than Ireland. The centre consists of a mountainous region from 6,000 to 8,000 feet above the sea level, densely wooded, but varied by open slopes called by the natives "patenas." When the forests were first turned into coffee plantations, these ready-cleared spaces were seized upon with avidity, but they were soon found to be unsuitable for coffee-growing, or for the growth of anything but lemon grass "of coarse texture and oppressive perfume." Round this elevated centre stretch the fertile low lands, once the occupation and support of a large population, but now in great measure relapsing into their native jungle, or covered with dense forests. Here and there, as on the hills, open glades are found. "These park-like meadows, or, as the natives call them, 'talewas,' vary in extent from one to a thousand acres. They are belted by the surrounding woods, and studded with groups of timber, and sometimes with single trees of gigantic dimensions. Through these pastures the deer troop in herds within gunshot, bounding into the nearest cover when disturbed." The forests abound in animal life, and are clothed with the most gorgeous tropical vegetation. Elephants, bears, leopards, buffaloes, wild hogs, and monkeys seek shelter in them from the noonday heats, while birds of every hue and note throng in the trees, and snakes, leeches, and mosquitoes torment the traveller, and in some sort modify his assent to the Arabian saying that Serendib was given to mankind as a second paradise.

The sea-coast presents a peculiar formation. The violence of the ocean currents and of the monsoons, together with the unusual amount of soil brought down by the rivers, combine to block up the mouths of the rivers with bars of sand and drift, behind which the pent up waters flow in canals, or lie in still lagoons, till swollen by floods they burst for themselves another exit. These inland waters, where small craft can sail protected from the storms of the outer ocean, under the shadow of palm trees, which grow luxuriantly in sandy places, were known to older mariners under the name of the "gobbs" of Serendib.

The Northern part of the island, as we have already mentioned, is of later formation. It is only slightly raised above the sea, is poor in soil, and finds its chief riches in the "still salt pools locked in with bars of sand" that cover large spaces of its shores, and produce a rich harvest of salt to the more than commonly industrious inhabitants. The cocoa-nut is the other great article of commerce. Sir Emerson Tennent inspected the marvellous well whose water, sweet at the top, brackish half way down, and fetid at bottom, rise and fall with a regular motion once in every twelve hours: they are incapable of exhaustion; even the unceasing pumping of three pumps worked by a steam-engine for eight and forty hours made no impression upon them; nor do they ever overflow in the heaviest rains. The water, however, has been found useless for irrigation, the crops so watered returning rather less grain than was originally sown. The supposed cause of these remarkable peculiarities is a subterranean communication with the sea, at a distance of seven miles off. It is curious that on this same coast the natives speak of a river whose tide runs inward from the sea,—the very tradition embodied by Sinbad the Sailor in his sixth voyage, when he was wrecked upon the coast of Serendib.

In climate, Ceylon has the advantage over the mainland of India that an island always possesses over a continent. The temperature is more equable. "At no period of the day are dangerous results to be apprehended from exposure to the sun, and, except during parts of the months [of March and April, there is no season when moderate exercise is not practicable and agreeable." The suggestions of Sir Emerson Tennent as to the best means of preserving health during a residence in Ceylon are very valuable as the result of careful observation and a long experience. We have not nearly exhausted even our inadequate remarks upon these delightful volumes, but space fails us, and we must reserve for a future occasion some notice of the inhabitants, productions, and commercial importance of Ceylon.

THE MILL ON THE FLOSS. By GEORGE ELIOT, Author of "Scenes from Clerical Life," and "Adam Bede." In Three Volumes. William Blackwood and Sons.

IN criticising "The Mill on the Floss" we cannot speak of it as a whole. The remarks that apply to one volume would be wholly inapplicable to the others. That this should be the case is in itself a great fault,—an unpardonable one when we remember the artistic power and self-control shown in "Adam Bede." No one but a woman of genius could have written the present tale, but it is to be regretted that a woman of genius should have consented to publish anything so unequal, so faulty, and so disagreeably painful. The scene of the story is laid in the neighbourhood of a small commercial town, through which runs the river Floss, and the characters almost all belong to the lower middle class,—the class of farmers, millers, and third-rate men of business,—a portion of the community which some thirty years ago had acquired but little of the education which in the present generation hides, as with a slight varnish, the original grain of their character. George Eliot's knowledge of this class is very thorough. In "Adam Bede" we had a wonderfully drawn specimen of it in the Poyser family. The present volumes give us many more examples, all sketched with the same care and truthfulness. Neither nature nor art is likely to produce a second Mrs Poyser; but all who delight in the portrayal of character,—not as it might be, but as it has been and is;—all who can take an interest in human nature for itself, without reference to any of the ennobling influences which transmute one portion of it, or to the unchastened strength and untamed energy which give picturesqueness to another portion;—all, in fact, who can assume the mental attitude of investigation and study towards their species, will find infinite enjoyment in the picture of the Dodson and Tulliver families. The effect of the picture on minds incapable of assuming this attitude is well described by the author herself:—

> Perhaps something akin to this oppressive feeling may have weighed upon you in watching this old-fashioned family life on the banks of the Floss, which even sorrow hardly suffices to lift above the level of the tragi-comic. It is a sordid life, you say, this of the Tullivers and Dodsons—irradiated by no sublime principles, no romantic visions, no active, self-renouncing faith—moved by none of those wild, uncontrollable passions which create the dark shadows of misery and crime—without that primitive rough simplicity of wants, that hard, submissive, ill-paid toil, that child-like spelling out of what nature has written, which gives its poetry to peasant life. Here, one has conventional worldly notions and habits without instruction and without polish—surely the most prosaic form of human life: proud respectability in a gig of unfashionable build: worldliness without side-dishes. Observing those people narrowly, even when the iron hand of misfortune has shaken them from their unquestioning hold on the world, one sees little trace of religion, still less of a distinctively Christian creed. Their belief in the Unseen, so far as it manifests itself at all, seems to be rather of a pagan kind; their moral notions, though held with strong tenacity, seem to have no standard beyond hereditary custom. You could not live among such people; you are stifled for want of an outlet towards something beautiful, great, or noble; you are irritated with these dull men and women, as a kind of population out of keeping with the earth on which they live—with this rich plain where the great river flows for ever onward, and links the small pulse of the old English town with the beatings of the world's mighty heart. A vigorous superstition, that lashes its gods or lashes its own back, seems to be more congruous with the mystery of the human lot, than the mental condition of these emmet-like Dodsons and Tullivers. I share with you this sense of oppressive narrowness; but it is necessary that we should feel it, if we care to understand how it acted on the lives of Tom and Maggie—how it has acted on young natures in many generations, that in the onward tendency of human things have risen above

the mental level of the generation before them, to which they have been nevertheless tied by the strongest fibres of their hearts.

This oppressive narrowness, however, will only be felt in the first volume, moving, as it does, entirely in the family circle of the hero and heroine, Tom and Maggie Tulliver, who are children when the tale begins. Their mother was a Dodson, one of four sisters, whose general family character and individual peculiarities are drawn with much humour. The family likeness which George Eliot succeeds in preserving in her groups without falling into any sameness of character shows a truthfulness and delicacy of perception which are truly admirable. With a healthy overgrowth of individuality, we see the old rock cropping out here and there as it does in real life; not showing itself ostentatiously, but lurking in odd corners and turning up when least expected. Though so entirely different from the original stock in many ways, we feel that Tom is his father's son, with a strong infusion of the Dodson blood; and in Maggie we can trace the warmth of a Tulliver and the strength of a Dodson, though individual superiority carry those qualities into a totally different sphere of action. It is with character as with genius. Inspiration lights by preference on an individual whose family has for some generations shown a vigorous amount of capacity. Great musicians and great painters for the most part own ancestors whose appreciation and knowledge of their art is above par, though it remains within the domain of talent and does not rise to that of genius. The soil is slowly prepared through successive lives before nature can put forth one of her best works. And so it is with character. Where we find one of unusual interest, bearing within it the capability of unusually high achievements, we also generally find a family tradition of strength, though that strength may have been coupled with other qualities that have made it anything but attractive. Relatively speaking, and comparing great things with small, this is the case with Maggie and her Dodson ancestors. It is quite natural she should belong to that stock. However uninteresting in themselves, they possess the strong and genuine stuff which, linking with a higher class of individuality, would be likely to result in a striking character. The peculiarities of the Dodson family are a strong belief in themselves, and a superstitious tenacity in clinging to points of conduct and behaviour which, having through generations received the family sanction, form for them the whole letter of the law. These, as may be supposed, are of rather an arbitrary nature, and comprise matters of very various degrees of importance, though they are all looked upon as equally solemn. An unimpeachable will, leaving an impartial distribution of property among kin, without regard to any capricious likes or dislikes, is a matter of religion in the Dodson family, —but hardly more so than the orderly rotation of dresses, or the due regard for table-cloths, home-spun, of course. "To be honest and poor was never a Dodson motto, still less to seem rich though being poor; rather the family badge was to be honest and rich; and not only rich, but richer than was supposed." The members of this family with their four husbands are made to talk and act with thorough consistency. Rather too much of their conversation is given in the early portion of the tale; but it is a first-rate piece of Dutch painting, and we should be sorry to quarrel with its size.

Our artist, however, is more than a Dutch painter; and the brother and sister Tulliver, with their childish joys and sorrow, so vividly and touchingly described, look like two of Frère's exquisite little figures transferred into the middle of the old amusing canvas. The real interest of the book lies in the development and the mutual relations of these two characters—Tom, with his warm but not demonstrative family affections, his rigid rectitude, his limited mental powers and perceptions, but thorough sagacity within those limits; Maggie, with her impulsive nature and imperious need for affection, her wavering aspirations, her mental capacity and breadth, and her utter want of common sense. He is always failing in charity from incapability of estimating her larger needs and temptations,—she is always failing in duty from the multifarious promptings of a passionate complex nature; he is constantly achieving creditable successes,—she, poor thing, making brilliant failures. Personal family pride, and a certain amount of pharisaical spirit which almost necessarily accompanies self-imposed virtue in minds that are not gifted with wide sympathies, make Tom very hard upon Maggie's sins; and Maggie's need of love and help make her very sensitive to Tom's severity and to the limited, and therefore unjust, nature of his judgments. It is unnecessary to say, with two such opposite characters, and with the main interest depending on their relations, that it is a very distressing story;—indeed, there is something quite morbid in its unrelieved painfulness, which will, we think, and justly, prevent the book ever being a really popular one. We instinctively feel that an author has no right to draw beyond a certain point upon the class of sympathies that are excited by pity; we yield up our mind to him for a time, but expect it to be returned in a healthy condition, and not worn and harrowed by the continued contemplation of suffering. We think, too, that in the service of misery George Eliot has, in the third volume, rather overstrained both the characters and the circumstances; there is a disregard of probabilities for the purpose of obtaining a culminating point of unhappiness that we would willingly have foregone.

The first volume carries us to the failure of the miller, Mr Tulliver, whose litigious propensities have brought about his ruin, but who attributes all his misfortunes to the villany of Mr Wakeen, the adverse lawyer. The son of this lawyer, a cripple, is Tom's school-fellow, and though the sensitive and intellectually gifted youth finds but little sympathy from the sturdy and athletic Tom, he excites all the pity and affection of little Maggie. The whole intercourse of these three children is given with wonderful naturalness. We do not remember, not even excepting Tom Brown, to have seen a more amusing or truthful picture of the natural English boy than we have in the unintellectual, sagacious, overbearing, but manly young Tom Tulliver. It is as fresh and vigorous a creation as any we have ever had from the pen of George Eliot. The second volume, excepting the first portion, which describes the family consultations and sale consequent upon the failure, is of a very different description, and deals with inward conflict rather than with outward events. Maggie's yearning for happiness, the imperious craving of her mind and soul for nourishment, the uncontrollable impatience of her young spirit cramped within the limits of a dull, unhappy, unsympathising home, to which she is nevertheless bound by her strongest affections, are described with a power and insight that are equal to the best portions of "Adam Bede." That she should passionately embrace an ascetic form of religion,—that she should embrace it thinking that it will by some subtle power turn suffering into enjoyment, and refusing to understand that suffering must remain suffering, though resignation may enable the sufferer to bear it willingly,—that she should yield to the temptation of enjoying Philip Wakeen's friendship, and at length consent to their clandestine engagement, thus losing her moorings again after years of discipline and trial,—all this is perfectly natural and beautifully described. Tom, too, throwing his whole energy into a definite object, working with a manful but surly spirit to pay off his father's debts, and dealing harshly and peremptorily with his sister and Philip when he discovers their intercourse, is equally true to the promise of his childhood. This portion of the tale is by far the most interesting; it is full of beautiful passages, and we cannot but wish that the author had finished at the end of the second volume. It would have left a rather imperfect tale, but would have spared the reader a great deal of pain, and the work would not have been open to more objection on artistic grounds than it is at present. The story would then have terminated with the reconciliation of Tom and Maggie at their father's death; whereas the third volume does no more than reconcile them in their own deaths, after a series of trials and faults on Maggie's part which are of too painful and disagreeable a nature.

The third volume deals with an entirely different set of people, —the gentry of St Ogg's,—and quite moves away from the strong vigorous characters that figured in the beginning of the tale. We cannot but think it poor in every respect. The workmanship is not exactly bad, but it is thinner and less good than any of which we could have imagined the author of "Adam Bede" capable. The characters, too, are insignificant and the situations forced. In order to accumulate upon Maggie's head the greatest possible amount of misery, she is made to fall in love with Stephen Guest, a man who, judging from the little we are told of him, was in every way inferior to her, whom we feel that she could not have been really interested in, though he was tall, strong, and good-looking. For his sake she betrays Philip, as well as her cousin and friend, Lucy, who is almost engaged to Stephen. It is true she repents and turns back before marrying Stephen. We cannot, however, but feel that, even granting her love for him, she would have turned back before she did. With her innate nobleness of character, and with all the discipline she had undergone, she would not have yielded so far, and wrecked the happiness of her two best friends. The whole thing is strained. There is a return of power in the concluding scene, when the devotion of Maggie's character shows itself in a manner unmistakeable even to Tom, and he takes her back to his heart, after having misjudged and spurned her in the harshest manner. That we should know so little of Stephen, upon whom depends the principal event of the tale, is a great fault.

Indeed, there is a want of proportion and coherence in the book that looks as if it had not been worked out as a whole, but put together out of different fragments. To have completed the story on the same scale as the first half would have taken at least six volumes. We should be sorry to lose any of the domestic scenes and conversations of the earlier portion, but it is a great mistake to have tacked on to that quiet, humorous picture a hurried and thoroughly disagreeable love story. There is a leisurely amplitude of matter, both reflective and conversational, in the two first volumes, which dispose the mind for anything rather than the sudden and melodramatic incidents of the third. With regard to the reflections, all that come from our author's pen are interesting, but she will do well to guard against prolixity in this respect. Like the writings of all rich and suggestive minds, hers requires much pruning. One idea suggests another so rapidly, one simile follows so quickly in the track of another, that if considerable self-control is not exercised, this kind of matter is likely to overrun the tale too much. "Adam Bede" was a thoroughly well-balanced work in every way, and the reflections, though numerous and interesting, were never obtrusive. The present work has all the appearance of having been

written either without the guidance of artistic feeling, or in too great a hurry for it to be brought into play. Had it been an earlier production, we could have understood its publication. But that George Eliot, after "Adam Bede," should have published "The Mill on the Floss," is one of those retrograde steps that are truly lamentable in real artists. Still nothing can destroy the interest of the characters, and it is in their delineation that the merit of the present work consists. The minor characters of the first portion are as good as those we have alluded to. Bob Jakin, in particular, has an amount of drollery and originality in him that would alone have been the making of an ordinary novel. The book in fact is so good in parts, that we cannot pardon the author for not having made it better as a whole. We trust that she will not again prove false to her highest capabilities, but that we may still enjoy their fullest exercise in some tale that may take rank by the side of "Adam Bede."

Stretton of Ringwood Chace. A Novel. In Three Vols. Hurst and Blackett. 1860.

It is the great distinction of this agreeable tale that it has positively no villain,—not even a quasi-villain who repents himself at the crisis of the tale. All the characters, including the servants, are estimable above the average; and though there is a mystery, a doubtful inheritance, a missing ancestral portrait with important bearings on the fate of the heroine, a buried casket with testimonials to character and personal identity, and in short all the complications to which the reader of a novel feels that he is justly entitled,—yet there is no satanic agency in the piece,—no one worse than a crusty old gentleman who turns out faithful as a trustee even to weakness, and an uncle who, if he hurts feelings, makes it up in diamonds. It is really cheering in the present day to take up a novel, written evidently with literary skill and insight, which adheres, even though it be apologetically, to all the traditional framework of a romance. We are sick of being pedantically schooled, by novelists as well as moralists, in the duty of understanding "the heart of our own age," and conducted into the intricacies of social problems, which, in such a place, cannot be adequately stated, much less discussed. Why should even the present author offer something like an excuse, through the mouth of some of the characters, for a disputed lineage, a mysterious picture, legal intricacies, and in general the romantic details of the plot? We are inclined to think it a great deal better than that kind of fiction which trades in earnestness, and better even than that genuine earnestness which expresses itself in fiction, unless such an expression be,—what it rarely is,—the most natural and appropriate form it can find for itself.

The author of the present tale sketches the characters with a light and graceful sketchiness. There is no effort at anything very deep. But the outline that is attempted is generally clearly drawn. There are to be sure two faithful and aged servants in the piece who are not remarkably distinct. "Old Thomas" and "Old Roberts" may not be fac-similes, but the distinction between them probably still lies undeveloped in the mind of the narrator. They are both infirm, both chivalrously attached to their young mistresses and the respective properties to which they belong, though one belongs mainly to the garden, and the other to the house. But faithful servants probably are and ought to be very like each other, so we do not complain.

One of the principal, and some of the incidental characters are very cleverly drawn. The young lady who is sisterly to her admirers and finally marries a widower, chiefly from the desire to be a mother to his children, is the freshest and most original character in the book. It indicates a great deal of observation and insight. The querulous grandparents, the "knitting" German governess, and the strong-minded old lady who presides at Ringwood Chace, are also excellently conceived and painted. With the four lovers who exchange partners in the course of the work we are less well satisfied. But the German governess must be permitted to speak for herself:—

> When Mabel, on the return of the governess from her vacation, had immediately communicated to her as the great news of the day, Clara's approaching marriage, Fräulein C.'s first remark had been:—"Then the Fräulein will now, doubtless *stick*—work—something—to a wedding present for her friend?" Mabel's eyes sparkled. "But I work so badly," she said. "Courage! I will help! And that will certainly go right well!" replied the good-natured German. "Only not knitting!" said Mabel, with a half-comic shiver. "My child, no! You shall embroider something right pretty; and the friend will so heartily take pleasure therein!" And the pocket handkerchief, begun under their auspices, bade fair to become a miracle of success under difficulties. "Well, mein Fräulein, and what shall the device be?" The governess was seated in state, at the head of the heavy school-table; a film of cob-web muslin in her hand; a book of patterns open before her. "Oh! first let there be a wreath of oak leaves—with acorns, if you can; that is what Clara likes best, I know, she always looked so beautiful, like a queen, when she put a wreath of oak leaves in her hair!" "Ah! well, as it pleases you, my child! That will be difficult in the working; but—we will see. Now for the corners?" "Her name must be in one corner." "Without doubt. But which name?" "I will only put 'Clara,' she is always 'Clara' to me. Ah! please put 'Mabel to Clara.'" "Good! that sounds well—touching. But for both names in one corner will room not find itself. Of necessity must we put 'Mabel' in one corner." Mabel could not quite repress a laugh. "Eh! what is that my child? What is amiss?" "Dear friend, I beg your pardon. Yes, that will do very well I think—'Mabel' in one"—she could not trust her voice to go on, lest her stifled laughter should break forth. "Right good; and 'to Clara' in the other. You comprehend me now right well. But there should also not wholly fail some sign—some token—of the friend's new name, of this happy event. The what do you call them?—the—Chiffens—in one corner—should there also appear." "Very well," said Mabel. "'C. H.' Very pretty initials; they will look very well for the third corner."

We have only one more criticism to make before recommending our readers to read this pleasant tale for themselves. There is, as we have already remarked with approbation, a pedigree-mystery in the work: but we regret to say that to us it labours under this defect, that we never get clear about it. There clearly should have been a pictorial table of descent, such as Mrs Markham and other historians who condescend to sympathise with the perplexities of confused minds append to their histories of the Plantagenets and Tudors. Not that it much matters to the tale, for we are well aware that all is believed to be unravelled, which is quite as good to a confiding reader as seeing it unravelled. But then the reader should not be left with a painful sense of his own imbecility. It takes off from the satisfaction of novel reading. Had the accomplished writer of this tale indulged us with a tabular view of the relation between the various Hugh Strettons, John Strettons, and the complicated female links in the genealogy of this tale, we should have risen from it with more self-respect. As it is, we have no doubt it was all clear at last, but we don't know how.

A fine perception of natural beauty is indicated throughout, and before the tale is ended we seem to know the localities of Ringwood Chace much better than we know the ancestral links in the Stretton family. The interest throughout is quiet and not intense;—but the whole tale is sincerely written, without a trace of any kind of cant or mannerism, and indicates an ability which will probably not be content with the present measure of success.

The North British Review. No. LXIV. Edinburgh: W. P. Kennedy. London: Hamilton, Adams, and Co.

One of the weak points of this generally able review is a want of what may be called purely literary interest. The style, even of the literary articles, is not of that close, original, and vital kind, which both attracts readers for its own sake and inspires confidence in the opinions of which it is the vehicle. The present number is, we think, more than usually deficient in this respect. Of the two samples of literary criticism which it contains, one, on Mr Redding's "Life of Campbell," is readable, and has one or two sensible remarks on Campbell's poetry, but that is all we can say for it: the other, on Mr E. A. Bowring's translation of "Heine's Poems," has either been very unjust to Mr Bowring in the specimens it selects from his work, or far too lenient in its judgment. Mr Darwin's now famous book is criticised from a theological, and therefore necessarily unfavourable, point of view. "Quakerism, Past and Present," is a meagre and unsatisfactory historical sketch of the Society of Friends, with some very insufficient suggestions of the causes of its decline. The other articles are of a well-known heavy sort, which appears to be manufactured specially for quarterly publication, and which is generally left by readers to the undisturbed "dignity of dulness."

Longfellow's Prose Works. In One Shilling Monthly Parts Illustrated by Birket Foster. Published by Dean and Son, 11 Ludgate hill.

The five first numbers of this new edition of Longfellow's Prose Works are now issued, and afford a fair specimen of what the work will be when completed. The paper and type are good and clear, the illustrations numerous and well executed. In the landscapes, Birket Foster has faithfully followed with his pencil the scenes Longfellow has described with so much poetical grace; and has added the charm of exact truthfulness to the delicacy and clearness of touch, the gracefulness rather than force or variety of style that render him peculiarly fitted to the author he is illustrating. The figure pieces are far inferior to the landscapes; but, as they are comparatively few in number, they detract but slightly from the pleasure with which we have turned over the pages of this pretty and ornamental edition of a favourite writer.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The Superior Council of Commerce, which, as you have already been informed, is charged to fix within the limits of 30 per cent. *ad valorem* the duties on British goods imported into France under the treaty, held its first sitting on Monday, under the presidency of M. Rouher, Minister of Agriculture and Commerce, one of the negotiators of the treaty. The Council consists, including the President, of not fewer than 19 members; saying nothing of a "Commissary General" and five assistants; nor of six other gentlemen as delegates of the Ministry of Agriculture and Commerce for the metallurgic and textile branches of manufactures. This number, I respectfully think, is far too considerable; there may be safety in a multitude of councillors, but there is terrible delay. The most distinguished members of the Commission are M. Michel Chevalier, M. Baroche, Vice-President of the Council of State, M. Schneider, one of the principal shareholders in great iron works, M. d'Eichthal, banker, M. Germain Thibaut, and M. Clerc, formerly Presidents of the Chamber of Commerce of Paris and Havre. The business done on Monday was merely of a formal character; and the Council resolved to meet on Monday, Thursday, and Friday in each week.

The Senate having adopted the Bill passed by the Legislative Body for modifying the duties on wool, cotton, and dyeing stuffs, it was promulgated with the Imperial sanction in the *Moniteur* of Sunday, and has now consequently force of law. The intention was, as I told you a fortnight back, to cause the new duties to come into operation from the 5th of this month; but from the time taken up in discussing the Bill in the Corps Legislatif this was found impossible, and the date of the 7th was adopted instead. At one moment, however, the Government contemplated giving the Bill two days' retroactive force; and, accordingly, the Customs officers were made to take an account of all the cotton and wool existing in manufactories under the Custom House seals on the date of the 5th. But on reflection, the resolution, was very wisely come to that the adoption of the principle of retroactivity in laws is so objectionable that it ought not to be adopted.

In my last I gave the duties which the new Bill imposed on cotton, wool, and indigo, which are the principal articles with which it deals. On gum, cochineal, sarsaparilla, potash, and other articles, the rule, with two exceptions, exempts from duties when imported by French vessels from countries out of Europe; from 1f to 10f the 100 kilogs for imports by French vessels from entrepots in Europe; and from 1f to 15f the 100 kilogs for imports by foreign vessels or by land.

It may be remembered that about a year ago a new bank was established in this city under the name of "Société Generale de Credit Industriel et Commercial." A meeting of the shareholders has just been held, and the directors presented a report, giving an account of the operations of the bank from the 7th May, when the business was commenced, to the 31st December, 1859. This report says that the bank was established "in imitation of the joint stock banks of England," in order to "receive deposits of funds which would otherwise remain inactive and sterile in the hands of capitalists; to allow interest on them and to keep them constantly at their disposition; employing them in the meantime in productive commercial and manufacturing operations." To the ordinary business of a joint stock bank the Société Generale de Credit has added the discount of "warrants,"—a class of operations still in its infancy in this country; and it has likewise laboured to bring into general use the English system of cheques. The seven months' operations of the bank were, all things considered, not unimportant. Its accounts current were rather more than 96,000,000f; the deposits made in it amounted to 5,047,383f; it made advances on warrants to the amount of 1,176,859f; it discounted French bills to the amount of 60,609,614f, and foreign of 17,770,889f; and lastly, its clear profits were 250,036f. Of these profits, 200,000f were ordered to be divided at the rate of 2f 50c per share—that rate being 4 per cent on the capital paid up; 40,000f were set apart as an allowance to the directors; and the balance was ordered to be carried over to the next year.

In the annual meeting of the shareholders of the Northern Railway, briefly mentioned in my last, the receipts of the working for the year 1859 were stated to be 56,753,967f 6c and the expenses 21,297,224f 72c; there was consequently an excess of receipts of 35,456,742f 34c. This excess, after deducting upwards of 9,000,000f for the interest on and paying off of loans, and various other charges, produces as stated last week, a total revenue of 65f 50c per share to be distributed. Of this sum 25f have already been paid on account. This is the largest dividend the Northern shares have yet attained. The length of the lines worked in 1859 was on an average 947 kilometres (592 miles). Apart from the working account, a sum of 21,966,626f was employed in the execution of works on the new lines, in repairs, &c., on old lines, in the purchase of materials, &c.; and this sum was provided chiefly by the paying up of calls on bonds. It was notified that, in execution of the statutes, one-third of the 25,000 new shares created some time ago will be admitted to share in the dividend for the second half of the present year, and that that third will be chosen by lot. Another third will enjoy the same privilege next year, and the remaining third the year after. Altogether the report was considered highly satisfactory.

The Lyons to Geneva Company has held its annual meeting within the last few days. The report read complained that, owing to the necessity of having to convey troops to and from Italy on account of the war, the Company had been obliged to reduce in a great degree its ordinary passenger and goods traffic; but that what it gained in one respect was far from compensating what it lost in the other. It was also subjected to loss by the Victor Emmanuel line, with which it is in communication, having had to interrupt its traffic, both on account of the war and of inundations. On the whole, its receipts were only 6,503,735f 34c, and its expenses were 4,012,697f 87c; excess of receipts, 2,491,037f 47c,—a sum far from sufficient to pay even the interest on shares and bonds. This Company is to be amalgamated with the Lyons and Mediterranean Company, and, as was stated a short time back, arbitrators have decided that the basis of the amalgamation should be calculated on the receipts of the two lines from 1860 and 1861. A reference to arbitrators was necessary in consequence of the Geneva Company requiring the receipts of 1861 to be alone taken, and the Mediterranean thinking that those of 1860 ought to be adopted.

The Ardennes Company has held its annual assembly also. It had last year only 165 kilometres (103 miles) in different sections opened for traffic, and they produced 3,307,034f 60c; the expenses of the working were 2,031,597f 70c. The receipts per kilometre were greater than those of last year, and the expenses per kilometre less. The extent of lines in course of construction was 252 kilometres (about 157 miles). The sum dispensed in works, in the payment of interest on shares, and in management, was 70,814,344f; the receipts were 3,768,273f more than the sum. The receipts, of course, consisted chiefly of payments of calls on shares and on bonds.

In the annual meeting of the Eastern Company, the receipts of the old lines for 1859 were stated to be 41,028,815f 88c; the expenses, 20,157,006f 40c:—excess of receipts, 20,871,809f 48c, reduced however to 19,328,219f 1c by a sum set apart to the reserve. This sum is sufficient to give a dividend of 38f 70c per share, of which rather more than one-half was paid in November last, and the rest is now payable. On the new lines, the receipts were 17,390,668f 44c; and the expenses, 9,573,046f 71c; balance, 7,817,621f 73c; but, as the said "new lines" absorbed in interest and partial paying off of loans not less than 16,915,909f, the balance was appropriated to the reduction of that item. These results were considered very unsatisfactory by a portion of the meeting, and rather loud complaints were made by some shareholders that the expenses on the Eastern Railway are proportionally larger than on others; but after a scene of some confusion, the report presented by the directors was sanctioned.

Some paper-makers of this country, more intelligent than the rest, instead of howling about the proposed removal of the prohibition to export rags, are busying themselves to find out what substitute for rags can be employed in the making of paper. There are, it appears, in Algeria various plants which are represented to be better for paper-making than any yet employed in Western Europe. The *alfa* is particularly recommended, especially when its pulp is mixed with that of cotton. I know not if these Algerian plants have excited attention in England, but if not, no time should be lost in inquiring about them.

The following is an account of the Bourse quotations of the week. Another public office has, by order of the Government, commenced making rather large purchases of *rente*.

The following in an account of the markets:—

FLOUR.—At *Paris*, business has been less active during the week. Quotations, yesterday, were 55f to 57f the sack of 159 kilogs for ordinary sorts, and 58f to 60f for other sorts. The four marks were for the current month 57f 25c to 57f 50c; June, 58f 25c to 58f 50c.

WHEAT.—At *Paris*, yesterday, business was not active and a small decline took place. Good qualities were at 34f 50c to 35f the sack of 120 kilogs; choice, 35f 50c to 36f; ordinary, 33f 50c to 34f. Of the provincial markets, 76 present a rise of 15c to 67c the hectolitre; 18 a fall of from 18c to 66c: 33 have undergone no change.

COTTON.—The sales of the week ending Friday, at *Havre*, were 11,755 bales, and, with the exception of "very low" Mobile and Georgia, all sorts rose from 1f to 2f, low New Orleans being 100f the 50 kilogs, and

very ordinary ditto, 107f. The arrivals were 7,515 bales. The stock on the 1st of this month was 275,100 bales. This week the market has been calm. Prices have been at 88f to 89f for low New Orleans. This fall, however, merely represents the abolition of the duty under the new bill which came into effect on Monday.

SUGAR.—Business at *Havre*, in the week ending Friday, was very limited, and prices were not firm. The sales recorded are 102 casks French West India disposable at 62f the 50 kilogs duty paid, and 180 casks new Havana of different qualities at an average of 39f the 50 kilogs in bond. The stock of French West India on the 1st of this month was 3,200 hogsheads. This week a rather larger lot of Reunion "gros grain" has been sold at 69f duty paid, one of ordinary ditto at 64f 50c, and some lots of French West India at 62f to 62f 50c, and some of Havana at 37f to 38f in bond. At *Bordeaux* and *Nantes*, last week, some large sales of Reunion and Mauritius took place. This week, at *Nantes*, Reunion "gros grain" has been done at 67f to 71f, and Guadaloupe usine at 66f.

COFFEE.—The demand at *Havre*, in the week ending Friday, was active, and prices of Hayti rose. The sales were: 700 sacks Hayti Port-au-Prince disposable, 81f to 81f 50c per 50 kilogs in bond; 1,750 sacks ditto for delivery, 81f 50c to 82f; 1,900 sacks Jeremie for delivery, 80f 50c to 81f 75c; 200 sacks Jacmel disposable, 81f; 1,200 sacks ditto for delivery, 81f 50c; 275 sacks disposable, 82f 50c to 83f; 50 sacks Geneives disposable, 84f; 850 sacks ditto for delivery, same price; 153 sacks Rio, not washed, disposable, 78f; 197 sacks ditto for delivery, 77f; 400 sacks Rio, washed, 85f to 88f; 1,600 sacks Costa Rica, 133f duty paid; 15,000 kilogs Malabar triage, 135f; 700 quintals (the quintal is nearly 2 cwts) Ceylon native triage expected, 131f; 120 sacks disposable, same price; 3,500 sacks Singapore disposable, 131f. The arrivals of different sorts were nearly 7,000 sacks. The stock on the 1st of this month was 4,531 tons. This week Hayti has been at 82f to 83f 25c; Ceylon triage, 130f, duty paid; Rio, 77f in bond; ditto, washed, 83f; Reunion, 160f duty paid. At *Nantes* and *Bordeaux* last week sales were unimportant, and in the former place this week a large lot of Java has been sold, but prices are not stated.

INDIGO.—Business at *Havre*, in the week ending Friday, was not active; the sales having only been from 35 to 40 cases Bengal at prices kept secret. There were no arrivals. The stock on the 1st of this month was 904 cases Bengal, 151 Java, 30 Madras and Kurpah. This week there have been no sales. At *Bordeaux*, last week, about 400 cases were sold; and this week 12 Kurpah have been disposed of: prices are not stated. At *Nantes*, this week, 30 cases Java have gone at 11f 35c the half kilog.

HIDES.—At *Havre*, in the week ending Friday, business was not important. 3,380 dry La Plata went at 155f and 160f the 50 kilogs duty paid; 450 Rosalies, 85f; 700 Pernambuco drysalted, 107f 50c; 49 Martinique salted, 77f 50c; 1,250 horse, dry Buenos Ayres, at 10f 87½c each; 2,991 ditto, salted La Plata, 1f 5c the kilog. There was also a public sale, at which, in addition to various lots of damaged, 101 Mexican dry (sound) went 106f to 110f the 50 kilogs duty paid; 43 Rio Grande salted, 81f; 670 Lima salted, 62f 50c to 63f 50c. In this public sale some lots of horse and other skins were also disposed of. The arrivals of the week exceeded 16,000; the stock on the 1st considerably exceeded 100,000 of different sorts. This week, Pernambuco drysalted have been at 107f duty paid; Buenos Ayres dry, 152f 50c.

WOOL.—At *Havre*, in the week ending Friday, the sales were 41 bales Buenos Ayres, unwashed, at 1f 95c to 2f 47½c the kilog in bond, and 12 bales sheep skins La Plata, unwashed, 1f 52½c. The arrivals were between 200 and 300 bales. At *Havre*, this week, Buenos Ayres, unwashed, has been at 2f 79c to 2f 90c. At *Rouen*, last week, there was a public sale: some lots of Russian went off readily, but others of Buenos Ayres and Australia were not in great demand.

TALLOW.—At *Havre*, in the week ending Friday, nothing was done, but La Plata was nominally at 67f to 68f the 50 kilogs duty paid. The arrivals were upwards of 300 casks Monte Video and Rio Janeiro. There have been no sales this week. At *Paris*, yesterday, the 100 kilogs were 136f 25c.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg. was 104f to 105f the hectolitre; Montpellier, 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f.

NAPLES, May 6.

After the failure of several attempts to establish railways in the Kingdom of the Two Sicilies, the Government has at last decreed that three great lines shall be constructed in Naples, and three in Sicily. The Neapolitan lines are to run—one from the capital to Brindisi and Lecce in the Adriatic; two from the capital *via* the Bassilicata to Reggio; three from the capital through the Abruzzi to Tronto. The lines in Sicily are to go—one from Palermo to Catane; two from Palermo to Messina; three from Palermo to Girgenti. A commission has been nominated to examine plans and propositions relative to the execution of the projected railways; but, from the manner in which things are managed in this country, years may pass away before the lines are finished, or even commenced.

COMMERCIAL AND MISCELLANEOUS NEWS.

The commercial accounts from New York state that the demand for seasonable goods continued to improve, and the supply on offer being small, prices had gone higher. Exchange was firm. Money was abundant. Good two to three months' bills were done at 5½ to 6 per cent., and four to six months' acceptances were 6 to 6½ per cent. discount. The imports of foreign dry goods for the week had been to the extent of 1,703,480 dols, and the amount put upon the market 1,650,790 dols, making since the 1st of January imports of 38,603,733 dols, and put on the market 39,315,323 dols. In the corresponding period of last year the imports were 38,211,073 dols, and the amount placed on the market 39,309,774 dols.

The dates from China are to the 30th of March. The rate of exchange had advanced to 4s 9¾d at Hong Kong, and 6s 7¼d at Shanghai, showing an adverse alteration of about 1¾ per cent. in the former case, and 3¼ per cent. in the latter. According to private accounts, a panic had been created at Shanghai from the operations of the rebels in the silk districts, and trade in consequence was suspended. The exports of tea to date are stated at 70,000,000 lbs, and of silk at 56,000 bales. Stocks were small, and prices higher. The Calcutta date is to the 23rd of April. The rate of exchange had receded to 2s 1d, a movement equal to 2½ per cent. in favour of this country, and the prices of Government securities had experienced a considerable improvement. The Four per Cents. had gone from 81½ to 84¼; the Five per Cents., from 95½ to 98½; and the Five-and-a-Half per Cents., from 100½ to 104½.

The creditors of the Turkish Government in this country cannot fail to be greatly interested in the following list of the debts of the Empire:—

	£
Loan negotiated in London in 1854, 4 per cent. guaranteed	3,000,000
Ditto, 1855, 6 per cent	5,000,000
Ditto, 1858, ditto	5,000,000
Current debts due by the Ministers of Finance, War, Navy, and Artillery, 620,000,000 piastres	5,700,000
Several months' arrears of pay to military and civil services, 230,000,000 p...	2,100,000
Séchims, redeemable next September, 80,000,000 piastres	730,000
Hazné Tahvilis (Exchequer Bonds), payable next January, 250,000,000 p...	2,300,000
Debts of the Civil List, now acknowledged by Government, 1,150,000,000 piastres	10,500,000
Consolidés issued last year, bearing 6 per cent. interest and 2 per cent. amortissement, 250,000,000 piastres	2,300,000
Amount to be paid by Government in the course of ten years to persons who have contracted to keep beshliks at a fixed rate of exchange, 280,000,000 piastres	2,500,000
Miscellaneous, old séchims, unliquidated claims, &c., say 425,000,000 piastres	3,870,000
	43,000,000

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending April 7, 1860, when compared with the previous month:—

	March 10, 1860.	April 7, 1860.	Increase.	Decrease.
	£	£	£	£
Bank of England	20717800	20918670	200870	...
Private Banks	3370819	3457647	86828	...
Joint Stock Banks	2946330	3067840	121510	...
Total in England	27040049	27444157	408208	...
Scotland	4001977	3882392	...	119585
Ireland	7204462	7095408	...	109054
United Kingdom	38247388	38421957	174569	...

And, as compared with the month ending the 9th of April, 1859, the above return shows an increase of 131,589*l* in the circulation of notes in England, and an increase of 377,762*l* in the circulation of the United Kingdom. On comparing the above with the fixed issues of the several banks, the following is the state of the circulation:—The English private banks are below their fixed issue 947,288*l*, the English joint stock banks are below their fixed issue 234,517*l*,—total below fixed issue in England 1,181,805*l*; the Scotch banks are above their fixed issue 1,133,121*l*, the Irish banks are above their fixed issue 740,914*l*. The average stock of bullion held by the Bank of England in both departments during the month ending the 4th of April was 15,207,888*l*, being an increase of 45,557*l* as compared with the previous month, and a decrease of 4,384,166*l* when compared with the same period last year. The following are the amounts of specie held by the Scotch and Irish banks during the month ending the 7th of April:—Gold and silver held by the Scotch banks, 2,565,938*l*; gold and silver held by the Irish banks, 2,636,466*l*; total, 5,202,404*l*; being a decrease of 168,781*l* as compared with the previous return, and an increase of 288,309*l* when compared with the corresponding period last year.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 9th day of May, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,063,780	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,588,780
		Silver Bullion	...
	29,063,780		29,063,780

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,728,943
Rest	3,264,464	Other Securities	20,739,025
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	7,284,448	Notes	7,182,845
Other Deposits	12,608,269	Gold and Silver Coin	784,546
Seven Day and other Bills	725,178		
	38,435,359		38,435,359

Dated the 10th May, 1860. W. MILLER, Deputy Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,606,113	Securities	30,389,968
Public Deposits	7,284,448	Coin and Bullion	15,373,326
Private Deposits	12,608,269		
	42,498,830		45,763,294

The balance of Assets above Liabilities being 3,264,464*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£299,175
AN INCREASE of Public Deposits of	412,750
A DECREASE of Other Deposits of	824,964
No change in the amount of Government Securities.	
A DECREASE of Other Securities of	1,161,641
AN INCREASE of Bullion of	490,015
AN INCREASE of Rest of	39,763
AN INCREASE of Reserve of	836,160

The principal features are the very large decrease in the private securities, and the increase in the bullion and reserve. These changes explain the reduction in the Bank rate of discount.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,128,535	£ 20,090,636	£ 21,257,107	£ 22,655,903	£ 22,606,113
Public deposits	5,830,623	5,163,146	2,749,169	4,867,380	7,264,448
Other deposits	9,945,704	10,081,864	15,243,836	17,136,982	12,608,269
Government securities	14,292,170	10,303,838	9,526,563	11,281,370	9,728,943
Other securities	9,708,822	18,630,357	15,211,033	19,625,154	20,739,025

Bank rate of discount	2½ p. c.	6½ p. c.	3 p. c.	4½ p. c.	4½ p. c.
Price of Consols	96	94¾	97¾	91¾	95¼
Average price of wheat	38s 0d	55s 10d	44s 2d	44s 10d	52s 6d
Exchange on Paris (short)	25 60 65	25 30	25 5	25 2½ 10	25 12½ 17½
— Amsterdam ditto	12 3	11 17 18	11 15	11 11 13	11 16½ 16¾
— Hamburg (3 months)	13 13	13 9	13 6½	13 4 4½	13 5½ 5¾

At the corresponding period of the year 1850, diplomatic relations had been resumed between England and Spain, after an interruption of two years. In France great agitation was occasioned by the debates on the new Electoral Bill, which was aimed against the system of universal suffrage. Some of the socialist organs were even recommending an immediate appeal to arms. European Turkey was in a very disturbed state.

In 1857, the Bank rate of discount was 6½ per cent. Heavy shipments of silver to the East were in progress, and the pressure for money in the Stock Exchange was so severe that 7 and even 8 per cent. was paid for short loans on English Government securities. Nevertheless, Consols were supported at 94¼, being only ¾ per cent. lower than they are now.

In 1858, Lord Ellenborough's resignation had just been announced. The issue of a new Turkish loan was shortly looked for.

In 1859, the money market was under the influence of a reaction from the excessive alarm which had been occasioned by the false announcement of a Russh-French alliance against England. The pressure for money had subsided almost as suddenly as it had arisen. There was a decided recovery from the extraordinary panic in the stock markets, except as regards Austrian securities, for which no buyers could be found. Although the proclamation of Napoleon III. to his army revived the traditions of the days when half Europe was devatated by the French troops, it had been intimated that the subscriptions to the French war loan of 20,000,000*l* had reached 60,000,000*l*.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 236,882*l*; in 1857, a deficiency of 8,558,493*l*; in 1858, an excess of 32,303*l*; and in 1859, a deficiency of 2,488,222*l*. In 1860, the deficiency is 8,130,756*l*.

The expectation of a speedy reduction in the Bank of England rate of discount was realised yesterday, when the minimum was lowered from 5 to 4½ per cent. On the 12th of April, when the rate was fixed at 5, the reserve of notes and coin was only 5,644,847*l*, an eminent discount house having taken a million and a half of notes into its own keeping, whilst the total of the coin and bullion was 14,637,102*l*. The Bank return just issued shows an increase of 2,322,544*l* under the former head, and of 736,224*l* under the latter. The Directors were probably influenced to an equal extent in their decision yesterday by the steady decline in the business of the Establishment, consequent upon the more active competition of the other dealers in money, and the reduction in the rates in the open market. Whilst first-class bills were being discounted elsewhere at 4½ and even 4¼ per cent., the Bank were not likely to get much business at 5. The change at the Bank does not seem to have as yet produced any alteration in the general market. The demand for money in Lombard street to-day was active, and only in exceptional instances did transactions take place below 4½ per cent.

The demand for money at the Discount Office at the Bank of England has somewhat increased since the alteration in the rate, but is still only moderate.

The joint stock banks have announced a reduction of ½ per cent. in the rates allowed for deposits. They now give 3½ per cent., being 1 per cent. below the Bank of England *minimum* rate of discount. At the London and Westminster Bank, however, only 2½ is allowed for sums below 500*l*. The discount establishments have reduced the rate for money at call from 4 to 3½ per cent., and for money, at a few days' notice, from 4½ to 4 per cent.

In the Stock Exchange to-day money was in considerable demand, and short loans on English Government securities were not readily obtained below 4½ per cent.

An instalment of 8 per cent., making 42 per cent. paid, falls payable on the Canada loan on Wednesday next.

The arrivals of specie and bullion announced this week have comprised 190,000*l* by the steamer Great Britain, from Melbourne, and 84,000*l* from New York. A considerable portion of the gold announced last week having now come to hand, a total of 486,000*l* was sent into the Bank during the week to which the above return refers. On the other hand, the Tyne has taken to Brazil 131,500*l* in specie, principally sovereigns drawn from the Bank.

Since the date of the Bank return, about 100,000*l* in gold has been sent in, inclusive of 96,000*l* this day.

The amount of specie shipped for Bombay by the steamer Indus, which will leave to-morrow, is only 41,080*l*, principally silver, the exchange at Bombay having become considerably more favourable to this country. Telegrams received yesterday, however, in anticipation of the coming mails (which will be delivered early to-morrow morning), report a panic and an almost complete suspension of trade at Shanghai, in consequence of the silk districts having been invaded by the rebels. The exchange on London had consequently risen about 3 per cent., being quoted 6s 7½d. An adverse movement, though to a less extent, appears to have likewise occurred at Hong Kong, where the exchange is quoted in some of the telegrams at 4s 9¾d. These advices appear to be calculated to stimulate a demand for silver for exportation to China. The price of Mexican dollars was, accordingly, firmer to-day at 62⅛d per ounce.

The Continental exchanges, this week, have experienced little alteration. The New York exchange has improved,

and moderate arrivals of gold from that quarter are shortly looked for.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley :—

Gold.—In the absence of all demand for exportation, further amounts of gold have been sent to the Bank of England; making, since the date of our last circular (3rd May), about 438,000*l*. Additional arrivals have come to hand, viz :—The Montmorency, from Melbourne, with 36,000*l*; the Great Britain, from Melbourne, with 190,000*l*; the Magdalena, from Brazils, with 27,080*l*; the Persia, from New York, with 44,000*l*; the Edinburgh, from New York, with 20,000*l*; but these sums have all been dealt with. The letters from Australia by the last mail report the sailing of six more vessels, the particulars as follows :—The Jessie Boyle, out 77 days, with 33,140*l*; the White Star, out 76 days, with 44,500*l*; the Result, out 74 days, with 162,640*l*; the Omar Pasha, out 67 days, with 60,800*l*; the Southampton, out 61 days, with 77,000*l*; the Dream, out 58 days, with 26,470*l*; making in all, 404,550*l*,—a great part of which may shortly arrive; and the Marco Polo was advertised to leave soon, and was known to have about 50,000*l* on board. In addition to the above, the Norwood still remains out with 38,000*l*. The shipments from New York are likely to continue, the exchange having advanced to a point at which a profit may be looked for. The Tyne has taken 114,150*l* (nearly all in sovereigns) to Brazils.

Silver.—But little is doing in the silver market; the demand for the Continent continues at 61¼d per oz, but the Indian buyers are scarcely doing anything; the outgoing mail to Bombay of the 12th instant will only take about 10,000*l* in bar silver, being the smallest amount that has been shipped to the East for some years. The silver ex La Plata was sold for the Continent at 61½d per oz. The Tyne has taken 17,350*l* in silver to the Brazils. We quote the price as 61¼d to 61⅝d per oz standard.

Mexican Dollars.—The Persia brought 20,000*l* in dollars from New York, which have not yet been sold; we quote the price as 62d to 62⅛d per oz. Buyers are awaiting the delivery of the letters from China before operating.

Exchange on India is without change: 2s to 2s 0¼d for bank drafts on Bombay and Calcutta at 60 days' sight; Madras, 2s; bills with documents, 1s 11½d to ⅝d.

India Government Loan Notes remain without variation at our quotations of last week, viz, 104 to 104½ for 5½ per Cents., and 98½ for 5 per Cents. The market is exceedingly quiet, but if the rumour of a rise in Calcutta from 102½ to 104½, by telegram, should prove correct, there may probably be more activity.

The monthly return of the Bank of France, extending to yesterday, the 10th of May, exhibits the following changes: Coin and bullion—increase 120,000*l*; bills discounted—increase, 430,000*l*; notes in circulation—decrease 910,000*l*; Government deposits—increase 1,040,000*l*; advances on public securities—decrease, 410,000*l*; private deposits—decrease 20,000*l*. The increase in the bills discounted scarcely indicates any revival of trade, for the active circulation has largely decreased.

The Stock Exchange Committee are inquiring into the transactions which certain members of their body have had with William George Pullinger, late chief cashier of the Union Bank of London. One of their objects is to endeavour to trace the mode in which the vast sum of which the bank has been plundered has been disposed of. Until their investigations are concluded, the Committee very properly observe silence.

The Committee of members of the Stock Exchange, who have been considering the question of stockbrokers' charges, have decided upon a tariff, which will shortly be taken into consideration by the General Committee.

The new ocean marine insurance association, the formation of which was alluded to in the last number of the ECONOMIST, is expected to be launched early next week. It will be called the "Thames and Mersey." The capital is fixed at 2,000,000*l*. Some of the most eminent mercantile names in Manchester and Liverpool appear upon the Board.

On Wednesday, the Grand Trunk Railway Company of Canada succeeded in placing their new loan of 1,111,500*l* in 6 per Cent. Second Preference Debentures. The *minimum* price fixed by the Board was 80, and it has been decided to make the entire allotment at this price, although upwards of one-half of the tenders were at an advance. The entire amount was taken up, with the exception of a sum of 225,000*l*, upon which the Company had obtained advances, and which has since been appropriated. The Second Preference Debentures have been in good demand since the success of the transaction became known, and they were quoted this afternoon 1¼ to 1¾ prem.

The new London and South African Bank, the prospectus of which was noticed in our last impression, has been received with favour, and the capital is already secured. The shares are quoted ¼ to ½ prem.

The annual meeting of proprietors of the National Provincial Bank of England was held on Thursday, when the Directors' report, recommending the payment out of the profits of the year 1859 of a bonus of 7 per cent., making, inclusive of previous payments, a total division of 15 per cent. for that year, was adopted. After the deduction of the bonus and two half-yearly dividends, there remains 18,317*l* to be added to the reserve fund, which will then amount to 223,015*l*. It has been decided to apply the reserve fund, on the 30th of June next, to the extent of 20 per cent. on the bank's paid-up capital, in paying 7*l* on each large and 2*l* on each small share, making the amount paid up on the former 42*l* and on the latter 12*l*. After this operation has been completed, the bank's reserve fund will stand at 103,015*l* 3s 7d, and its paid-up capital at 720,000*l*.

A first instalment of 6s 8d in the pound is now payable to the unsecured creditors of Messrs F. Calvert and Co., the brewers.

A movement is in progress with a view to obtain the closing of the Colonial Subscription Room, in Mincing lane, at three o'clock on Saturdays.

The Paris Bourse has shown decided heaviness, renewed distrust being manifested with regard to the course of politics, in connexion with the Italian and Swiss questions. To-day the important fall of ½ per cent. took place, the 3 per Cents. closing at 70.30 for money, and 70.25 for the end of the month. Compared with last Friday's rates, the fall amounts to fully 1 per cent.

After temporarily showing firmness, the English funds have yielded to the decline at Paris, and to the generally disquieting character of the political despatches from the Continent. Consols closed to-day at 95 to ⅛ for money, and 95¼, "buyers," for the 6th of June, being ⅛ per cent. lower than yesterday, and ¼ per cent. lower than on last Friday. The funds are still prejudiced to some extent by the competition of securities which yield a higher rate of interest. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :—

The railway share market has been weaker during the last two or three days, and prices have shown a drooping tendency, partly in response to the decline in Consols. Although the remarkable increase in the traffic has interposed great resistance to the decline in prices, a number of holders appear to have been discouraged by the continuance of the complications on the Continent. To-day's closing quotations, compared with those of last Friday, exhibit a fall of ¾ per cent. in Lancashire and Yorkshire stock, ½ per cent. in Eastern Counties and Great Western, and ¼ per cent. in Caledonian, London and North-Western, Midland, and South-Eastern. On the other hand, Oxford and Worcester stock has risen 1½ per cent., and London and South-Western, North British, Berwick and York and North Mid-

land ¼ per cent. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day :—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint par of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

The course of exchange at New York on London for bills at 60 days' sight is about 109¼ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

The Commercial Times.

MAILS FOR MAURITIUS.—Under the existing arrangements, the mails forwarded from this country to the Mauritius arrive at Port Louis a few days after the homeward mails have been despatched, and a long interval has consequently to elapse before replies can be sent to the letters from England. As an improvement on this state of things, and to apportion more equally the intervals for replies at the two ends of the line, the mails for Mauritius will in future be despatched one week later than at present, viz., *via* Southampton on the morning of the 20th of the month, and *via* Marseilles on the evening of the 26th of the month. The first mail under the new scheme will be despatched on the 20th instant.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Only a moderate supply of English wheat was on sale at Mark lane this morning. For all kinds, however, the demand ruled inactive, at Monday's decline in the quotations. There was rather more business doing in most descriptions of foreign wheat, at very full prices. Barley, and all other articles were in request

at extreme rates; but flour was a dull inquiry. This week's imports are moderate, viz, 5,050 quarters of wheat, 1,790 quarters of barley, 13,040 quarters of oats, 300 sacks and 1,000 barrels of flour.

At Liverpool, this morning, the trade, generally, was quiet, on former terms.

Messrs Briggs and Co., of Alexandria, writing on the 26th ult., inform us that new beans were coming forward freely, and that sales had been made at 28s to 29s per quarter. Indian corn realised 27s to 28s. Wheat was held at 34s 6d to 37s per quarter.

A fair business has been transacted in the Liverpoool cotton market during the week, the total sales amounting to 65,750 bales, and including 51,590 bales to the trade, 4,380 on speculation, and 9,780 bales for export. There is still a very large abundance in the choice of most descriptions of cotton, and prices are with difficulty supported; a few qualities however are scarce, and obtain readily an advance of fully ¼d per lb. Sales to-day, 8,000 bales, market closing without animation.

"For the first time since October last, the week's receipts of cotton," observe Messrs Neill and Co., of New York, writing on the 24th ult., "fall below those of the corresponding week last year. The maximum excess appears to be passed, and the future receipts, it is expected, will about equal last year's. The principal feature of the markets on this side is the scarcity of the clean desirable grades. It is known that the stocks and present receipts consist almost entirely of low and inferior qualities; hence the firmness with which clean stapled cotton is held, notwithstanding the low sales lately reported at Liverpool. Strictly middling is already worth 11½c to 12c at Mobile and New Orleans, and the supply falls short of the demand. The planting season at the South has been favourable for getting in the seed, and our late advices report a fall of rain throughout the cotton-growing States generally, which, together with the very warm temperature, is all that can be desired at present."

A report from New Orleans, dated the 25th ult., says:—"Sales to-day, 4,500 bales; prices easier, but quotations unchanged. Freight of cotton to Liverpool, ⅜d. Exchange on London, 8¼ to 8⅜ per cent. per annum, and with bills of lading at 7½ to 8 per cent."

The public sales of tea, held this week, have gone off slowly, and in some instances prices have shown a drooping tendency. Privately, only a limited business has been transacted. Advices from Hong Kong state that the total shipments to Great Britain were 70,000,000 lbs. The supply in the market, however, was very limited.

IMPORT of TEA in London, from Jan. 1 to April 30, 1860, and the STOCK on hand on May 1, 1860, compared with the corresponding date in 1859.

The dealings in the sugar market have been by no means numerous. However, full prices have been paid, both for raw and refined qualities. Several floating cargoes have changed hands for the Continent.

Annexed is a comparative statement of the shipments of sugar from the Mauritius from the beginning of each crop to the 1st of April of each year:—

	Crop. 1857-58. lbs	Crop. 1858-59. lbs	Crop. 1859-60. lbs

For coffee, the inquiry has been somewhat restricted, compared with last week, and the quotations have ruled a shade lower.

Rice has met a dull sale, and the quotations may be considered 3d per cwt. lower than last week, notwithstanding that the stock is limited, when compared with the corresponding period in 1859.

"We have had another month of heavy dragging business in silk," observe Messrs Durant and Co., "the tardy development of the spring trade having added much to the depression of our manufactures, and the deliveries of April were almost unprecedentedly small for late years. In China silk the pressure upon the market for some days antecedent to the departure of the last overland mail was rather severe, and prices gave way, but the mail despatched and the more pressing sellers relieved, matters have gradually improved a little in feeling at least, if not in fact, and there are now rather buyers than sellers at the prices of the lowest moment. It is yet early for the formation of any definite opinion as to the coming European crop, but the latest advices do not hold out any very sanguine expectations. In Bengal silk we have nothing of moment; some few sales have been made, but nothing requiring especial notice. Italian silk continues a dead letter; some few bales have been returned to the Continental markets. In Brutia and Persian silk nothing except a forced sale of a parcel of the latter at a reduction of 6d to 1s per lb."

We learn that the total shipments of silk from China to the latest dates were 56,000 bales.

The inquiry for rum has become more active, and extreme rates have been paid in every instance. Brandy and grain spirits have supported former terms.

Fruit has sold heavily, and prices, both at public sale and by private contract, have had a drooping tendency.

The public sales of indigo have been held this week. The quantity declared was 7,779 chts in the A, and 1,040 in the B catalogue—total, 8,819 chts, of which 335 were not printed or withdrawn, leaving the quantity to be brought forward 8,484 chts, consisting of 3,981 chts Bengal, Tirhoot, &c., 260 Oude, 2,309 Kurpah, 56 Bimlipatam, 986 Madras, 40 Manilla, &c., and 852

sundries in B catalogue. On the whole, the biddings have ruled steady. Fine Bengal qualities have realised an advance of from 2d to 3d per lb, but other kinds have changed hands slowly, on former terms. Of the total quantity which has passed the hammer, 5,685 chests, 1,930 have been withdrawn, and 1,211 bought in, leaving 2,544 chests sold. Last lot, 5685.

The saltpetre market has been steady, but the business doing in it has not increased.

Hemp and flax have supported previous rates. The demand, however, is confined to present wants.

The public sales of Colonial wool held this week have been well attended, both by home and foreign buyers, and the whole of the parcels offered have changed hands, at a slight advance on the opening rates. Letters from Melbourne to the 7th of March state that the supply of wool on offer was limited, and that the annexed rates were freely paid by shippers:—Super scoured, 2s 4d to 2s 6d; ordinary ditto, 2s to 2s 1d; handwashed, 1s 8d to 1s 10d; superior fleece, 1s 11d to 2s; ordinary to good, 1s 8d to 1s 10d; inferior, 1s 4d to 1s 6d; greasy (good), 11d to 1s 1d; ditto inferior, 9d to 10d. Since this day se'nnight over 17,000 bales have arrived in the port of London, and which will be brought forward during the present series, which will not terminate before the 2nd of June.

The market for Scotch pig iron is inactive at 52s 6d cash, mixed numbers. The shipments last week were about 11,000 tons. Copper has given way 2*l* 10s per ton. Other metals have changed hands slowly.

Linseed oil has found buyers at 28*l* 5s per ton. In other oils the transactions have been on a fair average scale.

The tallow market has been flat, and the value of P. Y. C. on the spot is 54s per cwt, with sellers for the last three months at 50s 6d. The deliveries continue limited.

There has been a considerable amount of business done in cotton by the trade this week, and exporters have also bought freely. The supply of all grades of American, except the best, is abundant. Prices have been maintained steadily, and indeed, in the better qualities, are actually higher. Egyptian have been again more saleable, and perhaps slightly improved in price. Brazil are steady at last week's rates. East India are without alteration, and in steady demand. The sales to-day will scarcely fall short of 10,000 bales. The market is quiet but steady. The reported export amounts to 9,780 bales, consisting of 5,320 American, 10 Brazil, and 4,450 East India.

MARKETS IN THE MANUFACTURING DISTRICTS

The business done in the manufacturing districts, this week, both for home use and export, has slightly increased, and, in some instances, prices have ruled a shade higher. Stocks have not received any important addition. The wool trade has been wholly devoid of animation, yet very few sellers have come forward, except at previous rates. The iron trade has continued in an unsatisfactory state. The coal trade has ruled steady; nevertheless, the quotations have had a drooping tendency.

MANCHESTER, May 10.—A considerable business has been done in narrow cloths, as ⅞ printers, madapollams, and 34 and 36-inch shirtings, principally for Buenos Ayres and other American markets. For India the demand has been steady, but not extensive. Shirtings, longcloths, and T'cloths have maintained extreme rates, but mainly from the effect of outstanding engagements; and the Eastern accounts telegraphed to-day from Marseilles have indicated no important change. Yarns have been a degree stiffer, and for several continental markets a moderate business has been done. Cop yarns have been quiet, though steady, their high price, with the high price of coals, and the irregularity of the operatives, affecting the narrow margin of profit, or absence of margin, that there is in weaving many staple fabrics.

LEEDS.—Both mantle fabrics and ordinary cloths were in good demand, and a fair business took place. The former are rather easier in price, but cloths command firm rates.——ROCHDALE.—The present characteristic of the flannel trade is extreme quietness, at all events so far as the business of the public market is concerned. Yorkshire goods are still in dull demand, yet the advanced prices necessitated by increased dyeing charges are well sustained.——BRADFORD.—Spinners continue to buy wool very sparingly. In worsted yarns, pieces, and cotton warps only a very limited amount of business has been transacted to-day, but we have no change to note in quotations, which are nominally the same as last week.——HALIFAX.—There has been a slight improvement in the wool market. The yarn and piece trades remain much the same, but with, it is generally thought, rather better prospects. At any rate, as the spring advances, there is sure to be a greater demand for light goods. The carpet trade is steady, but not brisk. ——BRADFORD.—Wool—There has been a better feeling during the week, and sorts most in request have been sold at stiffer prices. This remark does not apply to Down woole, of which there is a more abundant supply. In noils and shorts the market is kept bare, and prices are a little

firmer. Yarns—There is decidedly more life in the yarn trade, especially in the export branch. Pieces—There has been rather more doing, but the market continues in a depressed state.——LEICESTER.—The hosiery trade in most branches remains quiet; indeed, there is hardly an average business doing. Wools are yet firm, and extremely dear. Yarns are without material change.——NOTTINGHAM.—The lace trade remains quiet, and there is not an average amount of business doing in hardly any branch. The fancy trade is quiet, and the demand for silk goods is at present not much improved. In hosiery there is no important change to report; many departments remain quiet, but more business is expected to be done shortly. ——DUNDEE.—The linen trade is tolerably active, but we have no change to notice in prices. Flax is a slow sale.——BELFAST.—The transactions in our market, generally, have not been extensive. Quotations, however, are mostly supported.——WOLVERHAMPTON.—The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10*s*, at the works; best bars, 8*l* 10*s*; sheets, 9*l*; doubles, 10*l* 10*s*; nail sheets, 8*l* 10*s*; latins, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10*s*; hoops, 8*l* 10*s*; gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. Current prices of Pig Iron:—Staffordshire cold blast, 4*l* 7*s* 6*d*; best native hydrate pigs, 3*l* 15*s* to 4*l* 2*s* 6*d*; first-class all mine grey forge pigs, 3*l* 10*s* to 3*l* 15*s*; good mine pigs, with a modicum of flue cinder, 3*l* to 3*l* 5*s*; mine pigs, deteriorated by cinder, 2*l* 15*s* to 3*l* 2*s* 6*d*; grey forge cinder pig iron, 2*l* 15*s* to 2*l* 17*s* 6*d*; white forge cinder pigs, 2*l* 10*s* to 2*l* 15*s*; melters, Nos. 1, 2, and 3, 2*l* 17*s* 6*d* to 3*l* 2*s* 6*d*; superior makes of all mine melting iron, 3*l* 10*s* to 4*l*, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 7*s* 6*d*.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, April 25.—FLOUR AND MEAL.—Under more favourable European advices received since our last issue, the market for State and Western flour has assumed a decidedly more buoyant aspect, and with a moderately active demand for export, together with a steady fair inquiry from the local and Eastern trade, prices have advanced 5 to 10 cents per bbl. The receipts have been to a fair extent, nearly meeting the requirements of the trade. The sales for the three days comprise 37,000 bbls, including 18,000 bbls yesterday, mostly taken for export, the market closing firmly at the advanced rates. Canada flour has also been in more active request, and the sales reach 2,300 bbls. The market for Southern flour has sympathised to a certain extent with that for State and Western, an increased demand having prevailed for most kinds, and prices having appreciated 10 to 15 cents per bbl. Export from 1st to 24th April: wheat flour, 58,372 bbls, against 55,810 bbls in 1859.

GRAIN.—The demand for wheat for shipment has become more active, and considerable quantities have already been taken for export at enhancing prices. The demand has been to a fair extent from the local millers also, and the market closed firm yesterday for all kinds. The transactions have been moderately heavy, amounting in the aggregate to 65,000 bushels. Corn in moderate request. The total sales for the three days are 70,000 bushels, almost all taken for shipment. Rye remains quiet at our former quotations. Export from 1st to 24th April: wheat, 77,390 bushels, against 1,567 bushels in 1859; corn, 58,316 bushels, against 15,355 bushels in 1859.

NEW YORK, April 27.—Flour sells steadily, at full prices. Wheat is firm, and maize has advanced 2 cents per bushel.

EXPORT OF BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND, since September 1, 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

The favourable change in the weather, and the steady imports of foreign produce, have continued to exercise considerable influence upon the wheat trade. Since we last wrote, the whole of the leading markets of consumption have been somewhat scantily supplied with home-grown wheats; nevertheless, all kinds have met a dull inquiry, and, in some instances, prices have given way from 1s to 2s per quarter. At the outports, the dealings in foreign wheat have been much restricted. In the quotations, however, very little change has taken place. The return of warm weather has checked the inquiry for malting barley, which must be considered somewhat cheaper; but the demand both for grinding and distilling sorts has ruled firm, at very full prices. Oats, beans, and peas have commanded a steady sale, at full rates of currency; but the transactions in flour have continued restricted.

Throughout the country, the impression is that wheat has seen its highest range of value for some time. We ourselves think that 60s per quarter for the finest parcels will not be touched again during the next three months; but we may safely conclude that the value of all kinds of spring corn—even though importations may continue on a liberal scale—will be steadily supported, owing to the unusually small supplies on hand in the agricultural districts.

On the Continent, wheat has become heavy, at slightly reduced rates. Other produce, however, has commanded very full prices. An export demand having sprung up in the United States, the quotations, generally, have been on the advance.

The Scotch markets have been very inactive for wheat, at slightly reduced rates. Barley, oats, beans, and peas have ruled firm in price.

In Ireland, the corn trade has been somewhat heavy, and the quotations have had a drooping tendency.

Very little English wheat was on offer in our market to-day, yet most kinds moved off slowly, at Monday's decline. There was more business doing in foreign wheat at very full prices. The transactions in spring corn were numerous, and oats commanded rather more money. No change took place in the value of flour.

Mr Ed. Rainford states that 40 vessels have arrived off coast since the 3rd ult., laden with grain, and that a very limited business has been transacted in floating cargoes, on easier terms.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—There has been a steady demand at previous rates, and the improvement in the deliveries last noticed has continued. Floating cargoes of foreign for the United Kingdom also command more ready buyers. West India remains unaltered, and large arrivals may be expected. Some crystallised Demerara, by auction, went at 42s to 46s for middling grey to fine greyish yellow. There were 1,233 casks disposed of to yesterday. 5,170 tons were delivered last week, leaving the stock about 55,000 tons, against 40,500 tons in 1859. The increase for the Kingdom is quite 20,000 tons.

Mauritius.—On Tuesday, 20,140 bags were principally disposed of: brown, 32s 6d to 38s 6d; grey and yellow, 39s to 43s; grainy and crystallised, 40s 6d to 46s 6d per cwt.

Bengal.—260 bags Bally sold at 45s 6d per cwt for fine grainy yellow. Privately, business has been done in low brown at 30s 6d per cwt.

Madras.—Some few parcels of native have sold by private contract. 600 bags low yellow were taken in at 35s to 35s 6d per cwt.

Foreign.—1,950 bags Pernambuco partly found buyers at 37s to 39s for brown to low middling yellow. 142 baskets Java were bought in above the value. Of 16,000 bags clayed Manilla, a small portion of fair quality only sold at 37s; the remainder bought in at 37s to 38s, and since sold at rather less. 1,923 boxes Havana partly sold: brown, 38s 6d to 39s 6d;

yellow to fine grey, 40s to 46s; grainy, 46s 6d to 47s. 44 casks Cubs, 39s to 42s 6d. Privately, 1,800 to 2,000 boxes Havana, 120 casks Cuba. A floating cargo of Havana, No. 14, has sold at 29s 6d for a near port; one, No. 12, 29s 3d, for Sweden; six, for the United Kingdom, Nos. 11½ to 13, 28s 6d to 29s. A cargo of Paraiba is reported at 23s, and one of Cuba at 25s 9d per cwt.

Refined.—The market has been firm at the advance previously established. Low goods command 52s; middling, 52s 6d upwards. Crushed, 48s to 50s 6d per cwt.

Molasses.—A parcel of new Antigua has been sold at 18s, and one at 17s 6d per cwt.

Rum.—Importers continue sellers, and a considerable quantity of Demerara has been sold, chiefly at 1s 10d. A parcel of Penang brought 1s 6d, and some Mauritius 1s 7d per proof gallon. Other kinds are stationary in price.

Cocoa.—West India continues in limited supply, and 219 bags (chiefly imported from New York) realised 62s to 66s. 59 bags Trinidad sold at 80s to 92s per cwt, being rather dearer. Another cargo of Guayaquil has arrived. The present stock of 2,400 packages West Indian is smaller than for many years past, but an important increase is perceptible on foreign.

Tea.—Business by private contract has been chiefly confined to the lower grades of congou, these bringing previous rates; but yesterday the market was firmer, owing to the China intelligence. The public sales on Wednesday and yesterday went off steadily. About 9,170 packages found buyers out of the 24,640 contained in the catalogues. Middling hyson and gunpowder sold cheap. Other kinds at full valuations. The stock in the United Kingdom is 75,000,000 lbs, against 69,533,000 lbs, last year.

Coffee.—Unusually small supplies have been brought forward, which however, sold without animation, and latterly at barely former quotations 210 casks 138 barrels and bags plantation Ceylon went at 70s to 78s 6d for low middling to good. 50 casks 112 bags native: good ordinary, 60s to 61s. A few contracts have been made in both descriptions by private contract.

Rice.—The transactions have been upon a very limited scale since last Friday, and some low Moulmein, reported at 8s 3d, showed 6d reduction. 2,700 bags old Bengal, by auction, sold at 10s to 10s 6d for low middling to middling broken white. 3,000 bags old Bassein are reported at 9s 3d.

Imports and Deliveries of Rice to May 5, with Stock on hand.

Stock	52400	77750	85700	35700

Sago.—315 boxes bold medium were bought in at 17s 6d per cwt.

Spices.—The market is steady, but still rather quiet. 1,910 bags good Singapore pepper sold at stiffer rates, from 4d to 4½d. 1543 bags white were mostly bought in at irregular prices, ranging from 6½d to 7½d per lb for Penang and Singapore. 128 bags pimento brought 3¾d to 3¾d. 66 cases Cochin ginger sold from 75s to 79s, and 45 casks Jamaica, 88s to 140s. 41 boxes cassia lignea, from Bombay, were bought in at 92s to 95s per cwt. The private business has been, generally, unimportant.

Saltpetre.—Rather a firmer tone has pervaded the market, and the moderate quantity sold went at stiffer rates. Bengal, refraction 7½ to 4½, 41s to 43s 6d; 15¾ to 9½, 38s 6d to 40s. 177 bags Bengal, by auction, brought 43s for refraction 4¾ to 4 per cent.

Imports and Deliveries of Saltpetre to May 5, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	5270	7670	4150	5780
Delivered	4770	6620	5630	4110
Stock	4350	4000	5150	3730

Deliveries last week 200 tons, and in April 1,035 tons.

Cochineal.—340 bags about one-third part sold at previous rates: Honduras silvers, 3s 2d to 3s 10d; blacks, 3s 7d to 4s 6d; Mexican silvers, 3s 2d to 3s 3d. Teneriffe bought in: silvers, 3s 3d to 3s 4d; blacks, 3s 6d to 3s 9d per lb.

Dyestuffs.—Gambier is steady at 16s 6d to 17s, with few sellers under 17s. Yesterday, 820 bales, by auction, brought 16s to 17s. Cutch has become quiet at 28s to 28s 6d. Safflower is firmer.

Shellac.—Good orange sold at 10*l* 5s to 10*l* 7s 6d per cwt.

Lac Dye.—210 chests were partly sold: DT, 2s 1d; other good marks, 1s 6d to 1s 10d. There is more inquiry for the article generally.

Logwood.—A parcel of Campeachy has sold at 6*l* 12s 6d per ton.

Drugs.—The sales yesterday passed off flatly. Castor oil sold at previous rates.

Rubber.—East India has advanced to 2s 2d per lb.

Metals.—The only change of importance in this market has been the reduction on British copper, viz., ¼d per lb for sheet, and 2*l* 10s per ton for cake, at which moderate sales have taken place. Iron remains without change. Scotch pig ranged from 52s to 53s, closing at 52s 9d per ton. No sales have been reported in spelter. The market remains very firm. 150 tons sold for arrival at 20*l* 15s; 100 tons on the spot, 20*l* 10s per ton. Tin is firmer at last week's quotations: Banca, 136s 6d to 137s; Straits, 129s to 130s per cwt. The stock of foreign here amounts to 11,000 tons.

Jute.—The sales on Wednesday went off without animation. Of 3,950 bales brought forward, about 600 bales sold: low to fine, 14*l* to 19*l* 10s up to 21*l* 2s 6d per ton. The deliveries keep large. Present stock, 13,210 tons, against 9,950 tons last year, and 4,620 tons in 1858.

Oils.—Fish oils are quiet, and sperm offers at 98*l*. Cod cannot be obtained under 40*l*. Olive has been excited, owing to the export duty of 4*l* per ton imposed by the King of Naples. Gallipoli may be quoted 62*l*; other kinds, 56*l* to 61*l* per tun. Linseed continues in good demand at 28s 3d, and 29s 6d has been paid for delivery to the end of the year. Rape is dearer: foreign refined, 42s to 42s 6d; brown, 41s; the former sold at 45s 6d to 46s, and brown 43s 6d to 44s, delivered in the last four months of the year. Cocoa-nut steady: Cochin, 45s to 45s 3d; Ceylon, 43s to 43s 3d: Palm is firmer: fine, 45s 6d, and holders require 46s per cwt.

Turpentine.—600 barrels rough sold this week at 9s 3d. Spirits dull; American, 35s 6d; English, 34s 6d per cwt.

Linseed.—There have been large arrivals with a change of wind. Calcutta is in demand at 49s 6d to 50s 6d; 48s 6d to 49s afloat; Bombay on the spot, 52s; afloat, 51s 6d to 51s 9d. Several cargoes of Odessa off the coast have sold at 50s 3d and 50s 6d per qr delivered.

Tallow.—A limited business has been done this week, and the prices of foreign in all positions are slightly lower than on the 4th inst. First sort Petersburg Y.C., 54s; for delivery to the end of June, 53s 6d; last three months, 50s 3d to 50s 6d per cwt.

Particulars of Tallow.—Monday, May 7.

POSTSCRIPT. Friday Evening.

Sugar.—The market was firm to-day. 434 casks Barbadoes and 9,140 bags Mauritius, in public sales, went at the full valuations. 480 bags Siam were mostly bought in at 44s to 45s. 201 casks Porto Rico, 40s to 49s per cwt. 2,105 casks West India changed hands during the week. A cargo of Cuba has sold at 26s 6d, and of Havana, No. 11½, at 28s 6d for the United Kingdom. 1,700 bags clayed Manilla at 37s to 37s 9d; and 500 boxes white Havana at 35s.

Spices.—135 cases brown nutmegs sold at 1s 3d to 3s 8d for low to fine. 35 cases mace, 1s 1d to 1s 8d: sea-damaged and mouldy, 10d to 1s 1d. 300 bags Singapore black pepper were chiefly taken in at 4⅛d. 1,855 bags Penang pepper part sold at 3¾d to 3¾d. 49 cases cassia lignea sold at 2s to 3s decline: pile 1 and 2, 88s to 90s. 1,075 bags pimento went at 3¾d to 3¾d per lb.

Sago Flour.—190 bags sold at 15s 6d to 16s.

Gambier.—900 bales sold at 6d advance, from 16s 3d to 17s 3d per cwt.

Shellac.—Button sold at 7*l* 5s to 8*l* 2s 6d per cwt.

Japan Wax sold at 56s to 60s 6d per cwt, being much lower.

Cochineal.—36 bags Mexican went at 3s 3d for silver, and 3s 4d to 3s 7d per lb for black.

Tallow.—Y. C. declined to 53s 6d; for delivery to the end of June, 53s; town reduced to 54s 3d per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar continues very barely supplied. There is no alteration in prices worth noting. For export, 25 tons of 6 lb loaves fetched 42s 6d f.o.b. Nothing doing in crushed. In Dutch loaves, A. S. S. R., No. 1, 300 tons are reported as having been sold for one of the outports at 33s f.o.b. loose in Holland. Some few sales have been made in crushed V. O. at 31s 10½d for half tierces, half barrels.

Green Fruit.—Market well supported, demand for all kinds good. Some cargoes oranges from St Michael's, sold by Keeling and Hunt at public sale, went freely at the advance obtained last week. Lemons improved in value. More inquiry for nuts, and holders are disposed to meet the views of buyers, and the backward state of heme vegetation will create an extra demand for foreign fruit.

Dry Fruit.—The transactions of the week in currants have been limited. Finer descriptions are sought for, but there is still a long range between buyers and sellers' ideas of prices. Offers of 28s have been refused for common descriptions, both afloat and on the spot. Raisins have undergone a further decline. Considerable parcels of Valentias have changed hands among the trade at 28s, and exporters have bought at still lower rates. In red Smyrnas, at public sale on Thursday, about 100 tons were sold without reserve in damaged barrels and sound cases at 24s to 28s. Figs sell freely at present rates. Layer Muscatels are a few shillings better than last week.

English Wool.—There is rather more inquiry for English wool, but we have no alteration to notice in prices.

Colonial Wool.—The sales continue firm. Foreign buyers are still operating freely.

Hemp and Flax.—There is no flax on offer at present. Hemp is quiet this week, and rather lower prices have been accepted.

Cotton.—Sales of cotton wool from Friday, the 4th, to Thursday, the 10th of May, inclusive;—400 bales Surat, at 2¾d to 4¼d for very ordinary to good fair Dhollera; 1,100 bales Madras, at 4⅞d to 5¼d for fair to good fair Tinnivelly; and 3¾d to 5¾d for middling to fully fair Western. A steady demand has prevailed, and a fair amount of business transacted. Surat and Western Madras have brought the full prices of last week. Tinnivelly is rather dearer, and in some cases ⅛d per lb advance has been paid on the public sale prices of the 3rd instant.

Tobacco.—There has been rather more demand for good and fine orts for home trade at steadier prices: middling and ordinary are offered freely at concessions for parcels.

Leather and Hides.—There is not any change in the leather market this week. The supplies continue moderate, and the demand is of the same limited character as on the 2nd. No alteration can be quoted in prices. The news by the South American mail received on Friday last, reports large shipments of hides to England:—65,526 from Buenos Ayres, 28,108 from Monte Video, and 19,760 from Rio Grande, making a total for the month of 113,394. There are also 116,000 still afloat in vessels which had sailed previously to March. Advanced rates

had been paid for hides, which were, no doubt, stimulating the supplies. At Buenos Ayres, Monte Video, and Rio Grande, unitedly, 125,000 more hides were loading, and, in addition, several ships were gone to the up-river ports for cargoes. All the advices also agree in intimating the prospect of a continuance of the "cattle killings" to a late period.

METALS.—Neither the amount of business doing nor the currency of quotations show any material change since last week, with the exception of the reduction in the prices of copper. This metal (copper) was reduced in price to our quotations on the 8th inst., rather to the surprise of the market generally. The demand, which had become slack, has not yet been affected by the change. Iron is a little better inquired for in Staffordshire, and Scotch pig has rallied a trifle from the lowest point, but generally the trade is dull. Tin keeps steady in price and demand. Spelter has receded in price some 2s 6d to 5s per ton. Lead keeps steady. Tin plates fetch rather better prices.

TALLOW.—Official market letter issued this evening :—

	s	d
Town tallow	54	3
Fat by ditto	2	10
Yellow Russian	55	0
Melted stuff	40	0
Rough ditto	23	6
Greaves	16	0
Good dregs	7	0

Imports this week 291 casks.

METROPOLITAN CATTLE MARKET.

MONDAY, May 7.—The total imports of foreign stock into London last week amounted to 4,229 head. In the corresponding week in 1859 we received 1,485; in 1858, 1,344; in 1857, 1,213; in 1856, 272; in 1855, 2,031; and in 1854, 898 head.

From our own grazing districts, the receipts of beasts fresh up this morning were only moderate, and the general quality of the supply was by no means first-rate. Prime Scots, crosses, &c., sold steadily, at an advance in the quotations of 2d per 8 lbs the general top figure being 4s 10d; otherwise, the beef trade was far from active, on former terms. The mutton trade ruled steady, at fully last Monday's quotations, some prime old Downs, out of the wool, having realised 5s 2d per 8 lbs. There was a fair demand for lambs at full prices, viz., 5s 6d to 7s 2d per 8 lbs. Prime calves sold briskly, at very full currencies; but inferior calves met a dull inquiry, on former terms.

Supplies.	May 10, 1858.	May 9, 1859.	May 7, 1860.
Beasts	3976	3610	3740
Sheep and Lambs	20880	23300	25350
Calves	166	107	149
Pigs	380	250	520

THURSDAY, May 10.—To-day's market was scantily supplied with beasts, in, for the most part, very middling condition. Home breeds moved off steadily, at fully Monday's currency. Otherwise, the beef trade ruled heavy, on former terms. We have to report a fair demand for sheep—the show of which was moderate—at full quotations. Lambs commanded extreme rates, with a healthy inquiry. About 300 came to hand from the Isle of Wight. The supply of English calves was limited—of foreign, good. The demand for them was inactive, yet prices were supported. Pigs and milch cows sold at full quotations, but the sale for them was far from active.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	0	5	2
Second quality ditto	3	8	4	0	Large coarse calves	4	6	5	2

Coarse and inferior sheep	3	4	3	8	Small porkers	4	2	4	10
Second quality ditto	3	10	4	4	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	4	6	4	10	Quarter old store pigs	23	0	30	0

Lambs, 5s 6d to 7s 2d.

Total supply—Beasts, 792; sheep and lambs, 6,529; calves, 444; pigs, 360.
Foreign supply—Beasts, 170; sheep, 600 calves, 304.

NEWGATE AND LEADENHALL.

FRIDAY, May 11.—The supplies of meat here to-day are moderately good. Prime qualities moved off steadily at full prices; but other kinds are a dull inquiry, at barely late rates :—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	10	3	0	Mutton, inferior	3	2	4	0
Middling ditto	3	2	3	6	— middling	4	2	4	6

Prime small	4	0	4	2	Large pork	3	10	4	4
Veal	4	4	5	0	Small pork	4	6	4	10

Lambs, 5s 0d to 6s 4d.

HOP MARKET.

BOROUGH, Monday, May 7.—Our market has shown more activity. The demand, particularly for fine samples, has been good, and, in some few sales of fine Wealds and Sussex, extreme value has been realised. Mid and East Kents, 80s, 105s, 140s; Weald of Kents, 62s, 75s, 84s; Sussex, 62s, 70s, 76s.

FRIDAY, May 11.—The market continues firm at fully late prices, and but few bops on offer. The bine is making but slow progress.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, May 7.—During the past week the arrivals coastwise have been limited, but the weather has been milder, and trade rather heavy at the following quotations :—York Regents, 120s to 180s; ditto Flukes, 120s to 150s; Lincolnshire Regents, 100s to 130s; Dunbar ditto, 120s to 150s; Perth, Forfar, and Fifeshire ditto, 110s to 130s; ditto reds, 100s to 120s; Irish whites, 90s to 100s per ton.

THURSDAY, May 10.—There has been no material increase in the arrivals of home produce at this market either by coasters or rail, since our last report. The demand is rather brisk for good qualities, at fully previous rates, and inferior kinds are firm. York Regents, from 160s to 180s; ditto Flukes, 120s to 180s; Scotch ditto, 100s to 160s; ditto Cups, 110s to 130s; Dunbars, 120s to 140s; Rocks, 110s to 150s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 5*l*; clover, 4*l* to 6*l*; and straw, 1*l* 7 to 1*l* 14s per load. Trade less active.

CUMBERLAND.—Meadow hay, 3*l* 3s to 5*l* 5s; clover, 4*l* to 6*l*; and straw, 1*l* 8s to 1*l* 14s per load. A fair demand.

WHITECHAPEL.—Meadow hay, 3*l* to 5*l*; clover, 4*l* to 6*l*; and straw 1*l* 7s to 1*l* 14s per load. Trade rather dull.

COAL MARKET.

MONDAY, May 7.—Byass's Bebside West Hartley 15s 9d—Davison's West Hartley 15s 9d—Hastings Hartley 15s 9d—Holywell 15s 6d—Howard's West Hartley 15s 9d—Lambert's West Hartley 15s 6d—North Hartley 15s 6d—St Cuthbert's Hartley 15s 0d—Tanfield Moor 13s 3d—West Hartley 15s 9d—Wylam 16s 0d. Wall's end:—Acorn Close 17s 6d—Eden 17s 6d—Northumberland 15s 6d—Sheriff Hill 16s 6d—Bell 16s 6d—Braddylls Hetton 17s 9d—Framwellgate 17s 6d—Haswell 18s—Hetton 18s 6d—Hetton Lyons 17s 3d—Tunstall 17s—Benson 17s—Cassop 18s to 18s 3d—Hartlepool 18s—Heugh Hall 17s 6d—Kelloe 18s—South Hartlepool 17s 6d—South Durham 17s 3d—South Whitworth 15s 9d—Trimdon Thornley 16s 6d—Thorpe 17s—West Kelloe 17s—Whitworth 15s 9d. Ships at market, 184; sold, 136.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 11.—There has not been much business doing here this week, as the attention of the trade is directed to the sales by auction now in progress in London, which have opened at a reduction of 1d to 1½d per lb from the rates of the last February-March sales.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 11.—The corn market has been very quiet. Holders of wheat and flour, however, do not yield, and the few retail sales effected have been on former terms. Indian corn and Egyptian beans have been rather easier to purchase. All other articles steady.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 11.—There is little animation in the market for manufactured iron, the business in which during the past week has been only to a moderate extent, and prices remain unaltered. For Scotch pig iron there has been but a limited demand, and prices have still a downward tendency. In copper there has this week been a decline of ¼d per lb on manufactured, and 2*l* 10s per ton on unmanufactured. Tin plates are in slightly better demand; and in lead there has been more business doing.

The Gazette.

TUESDAY, May 8.

BANKRUPTS.

E. Jones, Woodbine villas, Bridge road west, Battersea, hosier.
J. Smith, Fareham, Hants, grocer.
J. Wilson, formerly of Sunderland, shipowner.

SCOTCH BANKRUPTS.

J. Grant, Edinburgh, commission agent.
R. Keddie, coalmaster, Elie, Fifeshire.
W. Lothian, ironmonger, Wishart, Lanarkshire.
A. Rowan, engraver, Glasgow.
S. H. Fyfe, ship chandler, Glasgow.

By advices from Hamburg the price of gold is 421½ per mark, and the short exchange on London is 13.3⅜ per 1*l* sterling. Standard gold at the English Mint price is, therefore, nearly 1-10th per cent. dearer in London than in Hamburg.

COMMERCIAL TIMES

Weekly Price Current.

☞ the prices in the following list are carefully revised every Friday afternoon, by an eminent house in each department.

LONDON, FRIDAY EVENING.

Add 5 per cent. to duties on currants, figs, pepper, tobacco, wines, and timber, deals, wood, &c., from British Possessions.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending April 28 amounted to 513,345*l*, and for the corresponding week of last year to 455,330*l*, showing an increase of 58,015*l*. The gross receipts on the eight railways having their termini in the metropolis amounted to 213,514*l*, and for the corresponding week of last year to 196,494*l*, showing an increase of 17,020*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, May 7.—The railway market was partially influenced by the decline in Consols, and several leading stocks closed at a trifling reduction. Foreign shares were dull. Lombardo-Venetian left off ⅜ to ⅞ premium ex div.; and San Paulo, ½ to ¼ discount. In American securities, the shares of the New York and Erie improved. There was a fair inquiry for British mines at an occasional rise. Among foreign adventures, St John del Rey were also higher, while one or two Australian mines showed a tendency to depression. Joint stock banks closed generally without change. In miscellaneous descriptions, Canada Land and Madras Irrigation were quoted lower. Victoria debentures, new, after touching 107½, left off 107⅜ to ½, or a fraction better than on Saturday. The Canadian loan closed 101¼ to 102 bonds, and 2½ to ¾ pm. scrip.

TUESDAY, May 8.—The railway market was inactive, but closed firmly, nearly all the leading British stocks being ⅛ to ¾ per cent. higher. South-Eastern showed the principal advance. In the colonial market, Grand Trunk of Canada stock improved to 33¾ to 34¼; the first preference bonds were also steady at the advance of yesterday, leaving off 93 to ¼. Geelong and Melbourne shares were 10s higher. French descriptions were heavy, and Victor Emmanuel obligations exhibited a reaction. Other foreign lines were without change of importance. Bahia were quoted ⅜ to ¼ dis., and San Paulo ½ to ¼ dis. American railway securities continued with a firm tendency, especially the shares of the New York and Erie, and Philadelphia and Reading, and the bonds of the Pennsylvania Central. Victoria debentures, new, were a little flatter at 107 to ¼. Mines were dull, and in one or two cases showed a reduction.

WEDNESDAY, May 9.—The railway market was steady in the morning, but slightly heavier at the close, in sympathy with Consols. In the colonial market the ordinary stock of the Grand Trunk of Canada declined to 33¾ to 34; the first preference bonds were also lower at one period, but afterwards recovered to 93 to ¼. East Indian left off without change at 102 to ¼. In foreign descriptions the shares of the South Austrian and Lombardo-Venetian Railway receded an eighth. American securities were dull; the bonds of the New York Central were quoted higher, while the New York and Erie shares show a reduction. Mines again exhibited an unfavourable tendency. St John del Rey, however, advanced. In joint stock banks there were some inquiries for London and Westminster and Provincial of Ireland. In miscellaneous descriptions, London Discount and Madras Irrigation improved.

THURSDAY, May 10.—The railway market was rather heavy, and closed at an average decline of about ¼ per cent. Great Western and Great Northern A showed the chief reduction. In colonial descriptions, East Indian and Grand Trunk of Canada stocks receded. The first preference bonds of the latter continued steady at 93 to ¼. Foreign shares were inactive. Lombardo-Venetian were slightly firmer, while Bahia left off heavily at ½ to ⅝ discount. In American securities the sinking fund bonds of the New York Central declined. Novia Scotia Government debentures improved ½ per cent. Mines were again rather flat: St John del Rey, however, exhibited a fresh advance. Ottoman Bank receded on the unfavourable reports from Turkey. Other bank shares were firm, especially London and Westminster. In miscellaneous descriptions there was a rise in Peninsula and Oriental Steam. Victoria debentures, new, were dull at 107. The Canadian loan left off 101½ to 102 bonds, and 2½ to ¾ premium scrip.

FRIDAY, May 11.—The railway share market to-day was very inactive and rather flat. Several of the leading stocks were quoted ⅛ to ¼ per cent. lower than yesterday afternoon. Lombardo-Venetian Railway shares were dull, at ⅛ to ¼ prem., ex div. The Indian and Canadian lines met with little business. Buenos Ayres Railway shares marked 2½ prem.

ASTLEY'S ROYAL AMPHITHEATRE.—It is satisfactory to observe that under the zealous and judicious direction of Mr E. Hughes, the Royal Amphitheatre is now conducted with a taste, spirit, and enterprise which cannot fail to sustain the ancient renown of one of the pleasantest and most favourite places of public amusement in London. The alterations which the new management has effected in the arrangement and decoration of the house promote the convenience of the spectators, at the same time that they materially improve the architectural aspect of the building.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 3d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

KEATING'S COUGH LOZENGES.—Statistics show that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; be, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Caiusecross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, sir, your most obliged servant, W. J. TRIGG."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

A New Edition of

THE PHILOSOPHY OF MARRIAGE.

By JOSEPH KAHN,

Graduate in Medicine, Surgery, and Midwifery in the Royal and Imperial University of Vienna, Erlangen, &c., &c.

This popular work (which has been translated into four different languages) has now gone through forty-one editions of 10,000 each, and is designed to impart accurate knowledge on subjects which involve, the means of securing moral and physical happiness.

Price One Shilling, or, post free, for Twelve Stamps, direct from the Author, 17 Harley street, Cavendish square, London, W.

DR KAHN CONTINUES TO deliver Daily, at Three and Eight o'clock, his popular Lecture on the "Philosophy of Marriage," at his Anatomical Museum, top of the Haymarket.

The Museum is open (for gentlemen only) from Twelve to Five, and from Seven to Ten. Admission, One Shilling.

Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

WHITE, MANUFACTURER, 228 Piccadilly, London

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from curf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

TEETH.—MR ESKELL, Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic), and Bennett's hill, Birmingham. Established 1847.

CONSUMPTION AND ASTHMA CURED.—Dr H. JAMES discovered, while in the East Indies, a Certain Cure for Consumption, Asthma, Bronchitis, Coughs, Colds, and General Debility. The remedy was discovered by him when his only child, a daughter, was given up to die. His child was cured and is now alive and well. Desirous of benefiting his fellow-creatures, he will send, post free, to those who wish it, the receipe, containing full directions for making and successfully using this remedy, on receipt of their names, with stamped envelope for return postage.—Address to O. P. Brown, 14 Cecil street, Strand.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq., M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

FREDERICK DENT, Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock of the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

HOLLOWAY'S OINTMENT AND PILLS.—Disfigurements Removed.—From the quickened action of the heart in spring, conjoined with variable temperatures, many affections of the skin are now prevalent, such as boils, pimples, tumours, blotches, &c. In treating such complaints "cosmetics" are worse than useless. The only rational mode of cure consists in subduing the local disease, whilst the impurities producing it are being expelled from the blood and glandular system. Holloway's Ointment ensures the former object, whilst his Pills promote most perfect depuration of blood, glands, absorbents, and capillaries. The humours being thus expelled, continuance in the same course benefits digestion, and the complexion assumes a wholesome clearness and transparency quite irreconcilable with the idea of depraved or suspended action.

ANOTHER CURE OF ASTHMATIC COUGH by DR LOCOCK'S PULMONIC WAFERS.—From Mr J. Richardson, Bookseller, Seaham, May 1, 1860:—"Gentlemen,—Having for some time been troubled with asthma and cough, and not being able to get any medicine that would relieve me, I was recommended to try Dr Locock's Pulmonic Wafers, and before I had finished one box I was nearly well. Whenever I get a cold and return of cough I take some of the wafers, which give me immediate relief.—I am, Gentlemen, yours, &c., T. B. BROWN." To Singers and Public Speakers, Dr Locock's Wafers are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1½d, 2s 9d, and 11s per box. Sold by all druggists.

Just published, in 1 vol. 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,

VITA VITALIS:

A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.

(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

MEDICAL ADVICE.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

"LURLINE,"

Mr V. WALLACE'S New Grand Opera, performed at the Theatre Royal Covent garden.

Patterns, designs, and directions for self-measurement sent free. N.B.—A perfect fit guaranteed.

LAWRENCE HYAM

announces that his New Stock of Clothing for the Season of 1860, consisting of the largest and choicest variety of Spring and Summer attire ever designed, is now ready for inspection, and to which he solicits public attention and patronage. The greatest confidence may be placed in the durability and style of all garments, combined with the utmost economy in price.

LAWRENCE HYAM

invites attention to his Surtout and Dress Coats, varying from 25s to 50s. The Material, Style, Fit, and make are perfect, and cannot fail to give general satisfaction.

LAWRENCE HYAM'S

Spring and Summer Overcoat and Undress Jackets are first in fashion, serviceable in wear, and beautiful in design. Price, 16s, 21s, 30s, 42s, and 50s.

LAWRENCE HYAM'S

Guinea Coats, 38s Suits, 15s and 17s Trousers, and 6s Vests, are "Household Words" in every family. An immense variety of the newest patterns to select from, specially made for the Spring and Summer Season of 1860.

LAWRENCE HYAM'S

Ordered Department is complete in all its arrangements. The most talented cutters and best workmen only are employed, whereby perfection in Fit, Elegance, and Style, are always secured at moderate prices.

Observe—The only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

SPRING AND SUMMER ATTIRE.—

E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of Minories and Aldgate, and corner of New Oxford street and Hart street.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

THE "INDISPENSABLE" SUIT,

made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

TOURISTS AND EXCURSIONISTS

are specially provided for at E. MOSES and SON'S, MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c., Corner of MINORIES and ALDGATE, Corner of NEW OXFORD STREET and HART STREET, BRADFORD and SHEFFIELD, YORKSHIRE.

A pamphlet sent free by post on application.

SOYER'S SULTANA SAUCE

Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858." 6 Edwards street, Portman square, London.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III., c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,

MAPPIN BROTHERS,

Queen's Cutlery Works, Sheffield; and 67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

FLEET STREET.

A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST

52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell	Mr W. Duncan Davison
Mr W. R. Sams	Mr Jules Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Hanover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

NOTIFICATION.

THE SECRETARY OF STATE

for INDIA in COUNCIL HEREBY GIVES NOTICE, that the INDIAN GOVERNMENT PROMISSORY NOTES issued with Coupons attached, may, upon their surrender, be REGISTERED in the Books in this Office, so as to admit of the sale and transfer of the whole or any portion of such property in even hundreds of Rupees. The interest upon the notes so registered will be payable by drafts upon India. When holders may desire again to receive their interest in India, a certificate of the amount standing in the Books in this Office will be given to them, to be exchanged in Calcutta for Promissory Notes as before.

SCINDE RAILWAY COMPANY.—

The Directors are prepared to receive Tenders of Sums of not less than £100 of the unappropriated portion of the £250,000 Debentures, payable in five years, about to be issued under the guarantee of the Secretary of State for India in Council, bearing 5 per cent. interest, and convertible into Stock at par, at the option of the holder.—By order of the Board.

THOS. BURNELL, Secretary.

Gresham House, Old Broad street, April 10, 1860,

ENGRAVING AND PRINTING.—

HENRY BRADBURY and CO., BANK-NOTE MANUFACTURERS, Foreign, English, and Colonial; Designers, Engravers, and Printers of Bonds, Coupons, Bills of Exchange, Cheques, Certificates, Drafts, Shares, &c.

MERCHANTS and BANKERS are respectfully informed by HENRY BRADBURY (late of Whitefriars) that the business of Bank Note Engraving and Printing, which, under his personal direction, has hitherto been carried on by Messrs Bradbury and Evans, will henceforth be conducted by a separate Firm under the title of HENRY BRADBURY and CO.

TIMES City Article, January 28, 1860:—"A series of specimens of Bank Note Engraving of a very remarkable character has just been issued by Mr Henry Bradbury, who has spent some years in perfecting that art. Apart from their beauty of design and finish, they present the essential advantage of being producible only by machinery so costly and so complex as to prevent all chance of successful forgery."

*** The above specimens may be had upon application.

Offices: 12 and 13 Fetter lane, Fleet street, E.C. (Facing Her Majesty's Record Office)

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH

is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

IMPERIAL AND ROYAL DANUBE STEAM NAVIGATION COMPANY.

The Steamers of this Company have recommenced running for the season—

From VIENNA to PESTH, every day, 6.30 a.m.

From VIENNA to SEMLIN, Sunday, Tuesday, Friday, 6.30 a.m.

From VIENNA to ORSOVA, GIURGEVO, GALATZ, CONSTANTINOPLE, every Tuesday, 6.30 a.m.

From PESTH to VIENNA, every day, 6 p.m.

From SEMLIN to PESTH and VIENNA, Sunday, Tuesday, Thursday, 5 a.m.

From ORSOVA to SEMLIN, PESTH, VIENNA, Saturday, 6 a.m

From GALATZ to GIURGEVO, ORSOVA, SEMLIN, PESTH and VIENNA, Saturday morning.

EXPRESS BOAT LINE from PESTH to GALATZ, in direct communication with ODESSA and CONSTANTINOPLE. The vessels leave Pesth every MONDAY, at 8 a.m., touch at MOHAIS, SEMLIN, RASIASCH, ORSOVA, and the principal stations of the Lower Danube, and arrive at Galatz on the following Saturday. Departure from GALATZ to PESTH and VIENNA, Saturday, 4 a.m.

ON THE SAVE.

From SEMLIN to SISSEK, Thursday morning.
From SISSEK to SEMLIN, Monday morning.

For further information apply to
Messrs PIETRONI and DRAPER,
81 London Wall, E.C.

OVERLAND ROUTE.—

COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month; for Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; for Gibraltar, Malta, Egypt, Aden, Bombay, Ceylon, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month; and for Mauritius and Reunion by those of the 20th of every month.—For farther particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS,

appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and her Majesty's mails. The following, or other vessels are appointed to sail from Liverpool:—

ARABIA, for BOSTON, Saturday, May 19.
AFRICA, for NEW YORK direct, Saturday, May 26.
NIAGARA, for BOSTON, Saturday, June 2.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, Water street, Liverpool.

STEAM SHIPS.—

The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

HAMBURG—Every Wednesday and Saturday morning. Chief cabin, 2l; fore, 1l 5s.

HARBURG—Every Sunday.

ROTTERDAM—Every Tuesday, Thursday, and Saturday, at 11 morning. Chief cabin, 1l 10s; fore, 17s 6d. Cologne, 34s 6d or 19s 9d.

ANTWERP, BRUSSELS, and the RHINE—The Rhine and Dolphin every Tuesday and Thursday, at 12 noon. Chief cabin, 1l 7s; fore, 20s. Brussels, 22s 3d. Cologne, 35s 6d. Leaving Antwerp for London every Sunday and Friday at noon.

OSTEND, BRUSSELS, and the RHINE—Every Wednesday and Saturday morning. May 16 at 10; 19 at 12 noon. Leaving Ostend for London every Tuesday and Friday night. Chief cabin, 18s; fore, 14s. Brussels, 20s 3d. Cologne, 34s.

HAVRE—From St Katharine's Wharf, every Thursday. May 17 at 8; 24 at 2 a.m. Chief cabin, 14s; fore, 10s. London to Paris, 1l.

PARIS, via CALAIS, direct—From London Bridge Wharf, every Wednesday and Saturday morning. May 16 at 10; 21 at 12 noon. Chief cabin, 14s; fore, 10s. London to Paris, 17s 8d.

BOULOGNE—From London Bridge Wharf, every Tuesday, Thursday, Friday, and Sunday morning. May 13 at 7; 15 at 9; 17 at 11; 18 and 20 at 12 noon. Chief cabin, 14s; fore, 10s. London to Paris, 16s.

EDINBURGH—From St Katharine's Wharf adjoining the Tower, every Wednesday and Saturday; at 10 morning. Fares: chief cabin, 25s; fore, 15s, deck, 10s; which fares include all pier dues at London and Granton.

HULL—From London Bridge Wharf, every Wednesday and Saturday, at Eight morning Chief cabin, 6s 6d; return, 10s; fore cabin, 4s; return, 6s

NEWCASTLE—From Newcastle Steam Wharf, 27 Wapping, every Wednesday and Sunday, at 10 morning Chief cabin, 8s; return ticket, 12s: fore, 5s; return, 7s 6d

YARMOUTH—From London Bridge Wharf, every Wednesday; and Saturday, at Four afternoon. Saloon, 8s; return, 12s: fore cabin, 5s; return, 7s 6d.

MARGATE, and RAMSGATE—From London Bridge Wharf, every Tuesday, Thursday, and Saturday, at 10 morning, calling at Blackwall and Tilbury piers.

HERNE BAY—Every Saturday, at 10 morning.

Offices 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

CAUTION.—FORD'S EUREKA SHIRTS.

—As spurious shirts are advertised and sold as "Ford's Eureka's," none are genuine unless stamped thus:—"R. FORD'S EUREKA SHIRT, 38 POULTRY, LONDON."

Best Quality:—Six, for 42s.
Second Quality:—Six, for 33s.
Richard Ford, 38 Poultry, Bank, London, E.C.

THE HOUSE OF LORDS AND THE PAPER DUTY.

THE CONSERVATIVE OBJECTIONS TO THE BUDGET AND THE REAL ONES.

It is not difficult to anticipate the sort of arguments which Lord Derby will use on Monday next. He intends to oppose only the repeal of the paper duty, but he disapproves of the Budget as a whole. Lesser organs of Conservative opinion have long assumed the same logical position, and familiarised us with their arguments.

First. It is said that the Budget is a Democratic Budget; that it transfers from the poor burdens which they ought to bear; that it is a scheme which may fitly usher in a legislature elected by a lower and worse class than the present electors; that it is a Budget which is unduly oppressive to property and unduly favourable to numbers. If this objection had not been put forward by persons entitled to attention, we should not have believed that it was possible to make it. Hardly any of the taxes which Mr Gladstone deals with press on the poor. He has repealed the remnant of the protective duties; he has simplified our tariff; he has arranged the financial items of a treaty with France. But neither French wines, nor the articles subject to the petty duties, nor those subject to the protective duties, press on the lower orders. No one has ever contended that the poor pay the paper duty. It is indeed said that the process of substituting direct for indirect taxation is one which may be used to place unendurable burdens on capital, and that it is this process which Mr Gladstone has used. But Mr Gladstone did not invent that process. It is an old one, as old as finance itself; it has been used many times in this country, and never more than of late years. Whether the use of it be good or bad in any case, must depend on the facts of that case. We need not abstain on principle from all resort to it, because in hypothetical circumstances it *may* be misemployed.

Secondly. It is alleged that Mr Gladstone has sacrificed large permanent sources of revenue. But this objection is true only of a portion of that part of the Budget which is dependent on the French treaty. The protective duties, the small miscellaneous duties, the paper duty, so far from being permanent sources of revenue, have been living for years under a sort of sentence of death. Every financier has wished to abolish them, has hoped to abolish them, has only permitted them to remain because there were other claims on his fund which he thought more urgent for the moment.

When we examine the permanent Customs duties affected by the French treaty, we shall find the wine duties to be the only ones which have not been condemned as protective or as too minute to be judicious. And there are many objections to the wine duties: when high, they protect the untaxed imitations and adulterations, and they exclude nearly all the cheaper sorts of light wine; that is, they exclude wine as a beverage, though they admit it as a stimulant. The loss of 830,000*l*, which is the entire loss to the revenue consequent on the alteration in the wine duties (without reckoning anything for additional consumption), is almost the only sacrifice of uncondemned revenue which Mr Gladstone has made, and this is not a sacrifice of unexceptionable revenue. The real defect of Mr Gladstone's Budget is that to which we have called the attention of our readers many times. It certainly is a concentration of too many excellencies. We shall have to pay a heavy price for doing all at once what it would have been easy to do gradually. We may without difficulty explain this.

Taking our financial system as a whole, in what we regard now as its permanent state, it contains two growing and augmenting elements. *First.* The indirect taxes on articles of general consumption, for the most part either luxuries, as tea and sugar, which are now by long use semi-necessaries, or taxes on beer, spirits, and other stimulants, which it is quite certain that people like, though it is not quite certain that they ought to do so. These indirect taxes grow year by year with the prosperity of the country. We have quoted the figures which prove it over and over again; and even without statistical proof every one would believe that imposts upon ordinary consumption must become greater and greater, as growing wealth enables us to consume more and more. *Secondly.* We may now, after eighteen years of experience, reckon a moderate income tax as a permanent part of our financial system. And this, too, grows and grows. As the capital of the country augments, its income augments, and the tax on those incomes likewise.

Two courses, therefore, are open to a financier. There are certain objectionable elements in our financial system, and there are also certain growing and augmenting elements. He may either wait till the natural and inevitable increase of the elastic taxes enables him to get rid of the bad taxes, or he may increase some decently fair tax that he can rely on, and sweep away at once what every one wishes to have swept away. The latter is the course which Mr Gladstone has adopted. As we all know, he has increased the income tax, and swept away endless duties which no one defends.

We are sure that to a great extent he was right. We wish to have a good financial system soon; we wish to accelerate the process by which the defects in our fiscal system are to be got rid of. We should be ready reasonably and moderately to augment direct taxation, to remove what hardly any one wishes to retain; but we have always ventured to question whether Mr Gladstone was prudent in stretching that principle so far as he has stretched it. We fear the strain on the income tax. We hope our apprehensions are excessive or are groundless. But we fear that the country will not be able to endure the pressure which is to be put upon it,—at least will endure it impatiently and unwillingly. In many states of our foreign relations we should be apprehensive lest

we might reduce too low the military and naval defences of the nation, and so secure immediate ease at the price hereafter of heavy cost. If we were living in the quiet time of Louis Philippe we might think this risk a great one. But we do not think so now. We have no confidence in Napoleon III. We believe his intriguing and restless policy will always keep the English nation awake; he has committed the greatest error a man in his situation could commit; rightly or wrongly, Europe always believes he is plotting something; and *we*, at least, shall never be sure that what he meditates would not be a cause of collision between him and us. We have many great duties; many and varied interests to protect. We shall never be at ease while we have near us a Bonaparte with vague, various, and suppressed designs. We have no fear that any reasonable expenditure for the purpose of national defence will be refused. On the contrary, we believe it will be popular.

But we fear that, under various political contingencies, we might be led to resort to financial expedients of which we do not think now. We have no doubt the expenditure will be voted, but have great doubts how it will be met. When parties are nearly divided, Governments are weak; and when Governments are weak, Chancellors of the Exchequer are frail. Suppose one of them, in search of stray votes, were to propose a diminution of the income tax, and on some excuse, more or less plausible, were also to propose a loan. We are not sure that the continued pressure of a high income tax would not induce the nation to assent to it. Borrowing is an easy process, and decent excuses might be found. We should hear a good deal of the "peculiar circumstances" of the time and the improvidence of Mr Gladstone.

It is certain that Mr Gladstone felt these reasons, because he did not impose the full amount of the necessary income tax. He made up 910,000*l* by miscellaneous taxes on trade which no one desired, which have been changed in shape many times since the 10th of February, which may press more heavily on trade than some of the Customs duties which are struck off, which will inevitably cause much irritation and annoyance in business, which we fear must be called *litigious* taxes.

On these grounds, we have always wished that Mr Gladstone had reserved some point of his great scheme till another opportunity,—till the natural increase of the elastic revenue had given him additional resources. It would have been easiest to omit the repeal of the paper duty. It is the part of the Budget most separable from the rest; it has no connection with any other part; it rests on grounds which are entirely peculiar to itself. We admit everything which can be said against the tax; we only fear that the country may not like to pay the needful income tax. If it will, we shall rejoice in the repeal, but we question it.

We now see the precise nature of the question which the House of Lords will have on Monday to decide. Some of our contemporaries have denied the competence of the Peers to reject the Bill for the Repeal of the Paper Duty. We do not go that length. We are ready to admit that a rare and exceptional power exists in our constitution which might justify them in rejecting it. But we think they should consider well before they do so. We last week explained that much business had been transacted on the faith of the proposed repeal; that nobody will now believe in the permanence of the tax; that it is unfair to keep an important manufacture for years in a provisional state; that it is scarcely worth while to exercise the rarest of constitutional functions to preserve a condemned source of revenue. These evils are certain. The fear of an augmented income tax is a fear only. The danger is but hypothetical, and may never be realised. We hope, therefore, that the House of Lords will have the moderation to abstain from exerting the constitutional reserve of power which is vested in them for extreme occasions. On account of its nature, such a power should not be used except in crises of the most evident danger, and we submit that this is not one.

ENGLAND AND SICILY.

The common law of England, we learn from the debate of Thursday night, is directly violated by the attempt to raise subscriptions in aid of Garibaldi's enterprise in Sicily, though it does not appear whether ny or what penalty is incurred by those who thus violate the law. Again, we learn that both the statute law and the moral sentiment of this country, though not of course the moral sentiment of Ireland, are offended by the attempt to raise Irish troops for the Papal army under Lamoricière, which is practically a menace against the extended kingdom of Sardinia. And, finally, we have learned distinctly enough that no law could practically be enforced in this country which would have the effect of punishing the subscribers to the Sicilian fund.

We confess our hearty delight that this is so—a delight which would be almost shared by Mr Whiteside and his Tory friends themselves, if they were in the least aware of the awful horrors which have driven the Sicilian people to insurrection, and have united them as one man in support of their noble deliverer. We confess our cordial concurrence in Lord John Russell's assertion, that "there are cases in which "it is not enough to say, 'Here is a man in rebellion,— "'Garibaldi is a man who is fighting against his Sovereign "'whom he ought to support.' It is not enough to say "these things in a glib and fluent manner. These ques- "tions, whether we take them as questions of law, of morals, "or of politics, require a good deal of examination before "you can affix either moral blame or moral praise to those "who engage in such undertakings." As Lord John Russell truly observes, the efforts made in England to aid the Greek revolution were as illegal as these now made to aid the Sicilian revolution; and yet they were not, and could not have been, suppressed by Government prosecutions. But Lord John Russell did not add what we will venture to add for him, that the insurrection of Greece was not excited and embittered by half the horrors which have now roused the Sicilian people against their worse than barbarous Government. There is in the public sentiment of every free nation a national court of equity which necessarily overrides and modifies the administration of the common law. We affirm, unhesitatingly, that it is and ought to be quite impossible in this country to carry out the law by punishing subscribers to the Sicilian fund. And we believe that many who spoke on the side of prosecution on Thursday night would be the first to indemnify the victims of any such prosecution when they came to know the horrible atrocities which justify the Sicilians in throwing off a Government that is the representative—not of order, but of the most hideous cruelty and the foulest licence. We will state reasons, which we, at least, esteem ample,—why the law could not be enforced in this case against the donors of aid to the Sicilians, without real disgrace to the English Government that should thus attempt to enforce it.

1. The law cannot properly be enforced against men whom the whole nation feels to be praiseworthy rather than culpable, for the law is thereby brought into dishonour. This is the case with all who now venture to aid the Sicilians. The Sicilians are now doing, we do not say merely what they ought to do, but what no nation with any lingering embers of self-respect could help doing in their place. Let any one who doubts this read the pamphlet which has been recently published in Paris, from what we understand to be thoroughly authentic sources, *La torture en Sicile par M. La Varenne*, and then let him ask himself if it is not one of the first duties of civilised men to assist, egally or illegally, those who are now bent on shaking off so wicked an oppression. The pamphlet to which we have referred reveals something more than the cruelty to which we have at last got accustomed in all the acts of the Neapolitan Government; it reveals a diabolic system of torture which not even the worst stories reported of our sepoy-mutineers can rival. If it be true, as there stated on good authority, that a woman has been exposed naked in the open streets for three days, and violated by numbers of the police until she should reveal her husband's hiding place,—if this and a host of similar stories be true, as there is every reason to believe they are, we assert that insurrection becomes the highest duty of a people so treated, and that to aid that insurrection becomes also an act which, however illegal, no healthy national conscience could permit to be punished as a crime. The Sicilian Government has been turned into an instrument not merely of oppression, but of diabolic guilt. And to prosecute men for breaking the letter of law, who are proving their loyalty to its spirit by their efforts to aid in the repu-

liation of such an anarchy,—would be an officious insult to the sentiment of the nation.

2. The English nation is under special obligations to support the cause of a constitution in Sicily. It was entirely through English efforts that the constitution of 1812 was established by Lord William Bentinck, and the Sicilian people certainly believed that that constitution had the guarantee of the English Government. Again, in the revolution of 1848 it was at the suggestion of England that the Duke of Genoa was chosen King by the Sicilians, and an English brig conveyed the envoy who took the offer of the crown and a draft of the constitution to Genoa. The Sicilian Ministers were then recognised by both France and England, and it was in great measure due to the complete reliance of the Sicilians on a foreign protection which we had certainly given them reason to expect, that that revolution failed. We do not for a moment say that our interference in these cases was wise or justifiable; but we do say that we thereby incurred a certain moral obligation to the Sicilians, which would render it singularly unbecoming for our Government to punish any private Englishmen whose sympathy with the Sicilians should induce them to aid the present constitutional party. On the other hand, all the relations between the Government of Naples and England are of a kind to cancel any claim for a strict enforcement of the laws of neutrality which it might have upon us. The late King and the present King have alike laughed at our remonstrances, and set aside all the advice we have given. The atrocities in Naples and Sicily are the deliberate replies of the Government to our representations of the necessity of constitutional reforms, and we cannot now regret that it was so. Such an answer to such protests sets our Government entirely free from any moral claim which might otherwise have been plausibly urged on them to forbid English demonstrations in favour of the insurgents.

3. The English nation takes a very deep interest in the consolidation of the North Italian kingdom, and it is all but certain that were this Sicilian movement crushed, the troops of Naples and Rome would be united against Sardinia, while it is likely enough that Austria would lend a helping hand. In such an emergency Piedmont would be hard pressed. She could not, after the annexation of Tuscany, rely upon the aid of France; and for her to conquer the Neapolitan force without assistance would be a task of no little difficulty. Naples has now 150,000 excellent troops in the field, and a very formidable park of artillery. This army, in conjunction with Lamoricière's force, might well succeed in wrenching the Romagna again from Piedmont, and possibly in completely breaking up the newly-organised kingdom. The diversion in Sicily is the only protection at present against this danger; and, therefore, it is a most vital question for Piedmont whether or not that insurrection shall be crushed. We do not, of course, urge this as a reason why England should interfere on behalf of Sicily, which we do not at all desire. Unless Italy can regain her own freedom as against purely Italian foes,—there is probably little chance of her keeping it. But we do urge it as a fresh reason against any impolitic prosecution of those Englishmen or Italians who choose to contribute their aid to the movement. The advisability or unadvisability of such a prosecution must depend in some measure on the probability that the objects of it would be regarded as martyrs and heroes by the nation at large. Such prosecutions are in the highest degree impolitic; and any fresh reason, therefore, which justly excites English sympathy in behalf of Garibaldi's enterprise is a fresh reason against enforcing the law.

To sum up these reasons, which we believe to be overwhelming, against any Government prosecutions:—we deprecate any such prosecutions, because all the sympathies of the English people are with the Sicilian revolution, and with the North Italian kingdom, which, in a great measure, depends on the success of the Sicilian revolution; and because it is in the highest degree impolitic to bring the law into dishonour by pressing its letter where the national conscience is set against its administration. We deprecate them, because we are morally free from all obligation to the Government of Naples, and morally involved in many real obligations to the constitutional cause in Sicily. And we deprecate them most of all, because it would be a painful and anomalous spectacle to see an English Government officiously prosecuting men who had acted from sheer detestation of the foul and monstrous iniquities of which Sicily has been recently the scene.

THE CLASSIFICATION OF ELECTORAL INTERESTS IN EDINBURGH.

The return relative to the householders of the City of Edinburgh has several times been referred to in the House of Commons as proving how very small a change the 6*l* franchise is likely to make in the constitution of the constituencies. If the 6*l* franchise be granted, it is said, nearly half the householders of Edinburgh will still be excluded, and those who would be added by the present measure will increase by little more than fifty per cent. the number of those who are already entitled to vote. Now we have never professed much alarm as to the immediate working of the Reform Bill. We have always said that the danger did not arise from the revolutionary effects of the actual measure, but from the democratic tendencies which would be formally sanctioned by it; from the admission of the *principle* that the most numerous class has a right to rule the nation by virtue of its numbers. We do not then care to show that the change to be effected in any particular place would at once throw all the power into the hands of the working classes. If we did care to show it, we should not single out Edinburgh, where the probable effect of the bill will certainly not compare with that which would be produced in many of our northern cities. Let us compare it for a moment with such places as Leeds or Derby, and it will be seen at once that Edinburgh is not at all a fair type for the great towns of England.

	Registered electors.	6*l* and under 10*l*.
Edinburgh	8,469	3,947
Leeds	5,954	10,343
Derby	2,505	6,049

From which it is clear enough that what holds good for Edinburgh by no means holds good for the great English towns.

But, putting aside this consideration, it is perhaps worth while to avail ourselves of the elaborate analysis given us in this classification* of the population of Edinburgh to see how far the new Bill would diminish the influence of educated thought in the constituency. The four classes into which the return divides the constituency are as follows:—(1) Those classes of whom no members occupy houses under 10*l*; (2) those of whom some occupy houses below 10*l*, but of whom fewer live in houses below 6*l* than in houses between 6*l* and 10*l*; (3) householders who belong to the more skilled classes of labourers, many of them occupying houses above 10*l* in rental, but of whom fewer live in houses between 6*l* and 10*l* than in houses under 6*l*; (4) householders belonging to the less skilled labouring classes. Now, first, let us see of the present constituency,—that is, of those who live in houses above 10*l*,—how many may be considered to belong to the educated, and how many to the less educated classes. The 10*l* householders are thus classified:—

10*l*	Householders belonging to classes which live exclusively in houses at or above 10*l*			1,763
10*l*	Householders belonging to classes		(2)	3,484
10*l*	—	—	(3)	2,185
10*l*	—	—	(4)	431
				*7,863

* Owing to some cross classifications, the present registered electors rather exceed in number the 10*l* householders as classed above.

The 1,763 householders first mentioned are made up chiefly of advocates (108), bankers (32), civil engineers (28), hotel keepers (64), lords of session (12), ministers (152), persons without any profession or business (691), professors (20), publishers (21), secretaries (15), solicitors (151), wine merchants (45), and writers to the signet (274),—in which we have enumerated all the professions which number more than 10 members. These, it will be seen, must rank as on the whole belonging to the highly-educated classes; but these form but one-fifth part of the 10*l* householders.

Of the 3,484 10*l* householders enumerated under the second head, the greater number may still be said to belong to the fairly-educated classes,—consisting of agents, architects, booksellers, builders, clerks, commercial travellers, drapers, grocers, Government officials, surgeons, teachers, naval and military officers, and so forth. But even amongst

* Parliamentary Paper, No. 278.

them we find 129 "servants," and many other persons who do not usually receive much schooling, though they may fairly be considered to contain intelligent politicians. Adding, then, these two heads together, we find that 5,247 of the 10*l* householders belong to classes which may be considered in general politically intelligent, while about half of them may, perhaps, be said to belong to what would be usually called the thoroughly-educated classes. There remain 2,616 of the 10*l* householders, who are classed under the third and fourth heads, of whom the most numerous are the tailors, the printers and compositors, the painters and glaziers, the joiners, the boot and shoemakers, the cabinetmakers, the bakers, the accountants. These cannot be said, as a whole, to be a class of much political education. No doubt they are fully competent to exercise the franchise, but we should scarcely say that they would throw their weight into the scale of educated political thought, in case the majority of their fellow-tradesmen and companions now about to be enfranchised inclined in the direction of a demagogue. And of the classes last enumerated, a number will be enfranchised by the Reform Bill, almost exactly equal to that of those who now possess it. The new Bill will, indeed, almost exactly double the number of voters among the class of small tradesmen and journeymen just referred to,—2,100 being added of householders between 6*l* and 10*l* to the 2,185 of the same class who occupy houses above 10*l*. Nor can we doubt that this will be without political effect on those who already possess the franchise The 166 printers and compositors who will be added by the Bill, will, for instance, greatly influence the votes of the 126 who already possess votes; the 230 newly-enfranchised joiners are not unlikely to carry with them a good many of the 127 who are already voters,—and if Mr Bright's suggestion that the trades' unions might wisely be turned into political organisations be carried out, this would undoubtedly be the case. And, indeed, whether this be so or not, a large influx of new voters with but little political knowledge are sure to leaven in some measure that smaller number of men of the same class who already have the franchise.

It seems, then, that in Edinburgh at the present time,—the number of what would ordinarily be called well-educated voters may be at most 3,000 out of 8,000, and that this Bill, while adding about 50 per cent. to the whole number of registered electors, will add more than 100 per cent. to the least politically intelligent section of those electors, by doubling the number of journeymen and small tradesmen, and adding, besides, some hundreds of servants, porters, police officers, labourers, &c., to the constituency. Now, can any impartial thinker for a moment congratulate himself on giving as much political power to each of the individuals in the classes thus added as is possessed by the highest class of those now holding the franchise? If we remember, moreover, what we have proved, that Edinburgh is by no means a fair specimen of the effect of the Bill in our large towns,—we shall not fail to see that, while it is of the first importance that the classes now promised a share in the franchise should really receive it, it is also of the first importance that every member of these classes should not everywhere receive a political influence individually equal, and therefore collectively vastly superior, to that of the best class of the present electors.

STATISTICAL MARES' NESTS.

To judge from the numberless specimens which come before us of loose application and inaccurate quotation, it would seem as if the manipulation of statistics required peculiar care, special training, and an exceptional degree of conscientiousness. Though the source of half our knowledge, and of all our exact knowledge, on matters of commerce, crime, and the more material branches of political philosophy, they have been so shamelessly resorted to by controversialists for missiles and weapons of offence, and have so often been compelled to bear false witness in favour of false theories, that cautious men have begun to look upon them with a natural but most unmerited and mischievous mistrust. Of all the sinners who have laboured through a life of horrid industry to bring this obloquy upon them, no one has offended so grievously as Sir Archibald Alison. No writer has had so many exploded doctrines to prop up; no writer has so perversely seized upon those special fallacies which needed figures to sustain them, and yet which all figures so distinctly and unmercifully negatived; no writer, accordingly, has pressed them so lawlessly into his service, or has been, within our memory, so profuse, so unscrupulous, or so unlucky in his use of them. He seldom quotes them accurately; he seldom quotes them twice alike; he constantly misunderstands them in the most amusing, and cooks them in the most perplexing, manner; and though we cannot and need not suppose that he would wilfully and deliberately deceive his readers till he had first deceived himself, yet the character of his intellect—as shown both in his metaphors and his statistics—is so strangely blundering and muddy, that it enables him innocently to maintain principles and publish tabular statements, which, in a clearer and less clumsy brain, would imply downright dishonesty.

The April number of "Blackwood's Magazine" contains an article on Sir Archibald Alison's "History of Europe since "1815," the main purpose of which is to vindicate the historian from the charge (among others) made against him in the January number of the "Edinburgh Review" of having fallen into a most astounding statistical error. The accusation and the answer are both curious in their way. The reviewer detects and exposes the blunder of the historian, but apparently not being quite familiar with the practice of handling official tables, falls into a confusion himself. The historian—or the historian's friend—in his reply, fails to detect the mistake of his antagonist, and while admitting, actually proceeds to justify his own. In quoting falsely, he cannot even be brought to perceive that he has done wrong! Sir Archibald, in his history, being anxious to make out—what he solemnly believes—that free trade has ruined the country, quotes tables from Porter's "Progress of the "Nation" to show how much "the balance of trade" is *against* England. We now proceed to quote (with some abridgment) the Edinburgh reviewer's words:—

When statistics are made the basis of arguments, Sir A. continually misquotes them in the interest of his theory. Thus he actually places side by side, *as corresponding figures*, tables of the *declared* value of imports with tables of the *official* value of exports, although the declared values of both imports and exports, which do not suit his theory, stand side by side in the original. Sir Archibald gives the following:—

	Imports.	Exports.	Balance against this Country.
	£	£	£
1849	105,874,607	 63,596,026	 42,278,582

On referring to "Porter," p. 356, from which the author professes to quote, we find that while these imports are *official* value, and these exports *declared* value, from disconnected columns, the exports did in reality absolutely double the imports. Thus, in official values throughout:—

	Total Imports.	Re-exports of Imported Merchandise.	Exports of British and Irish Produce.
	£	£	£
1849	105,874,000	 25,561,000	 164,539,000

If we subtract the re-exported foreign and colonial goods from our total imports, we find the net imports to be 80,000,000*l*, and the net exports 164,000,000*l*. In place, therefore, of a balance against the country of 42,000,000*l*, there is a balance of 84,000,000*l* in its favour.

Now, the historian, the historian's critic in the "Edin-"burgh Review," and the historian's defender in "Black-"wood's Magazine," have all shown strange inaccuracy and confusion in dealing with these figures. It is perfectly true that the historian, having a case to make out, has committed the monstrous, and as far as his readers are concerned, deceptive, blunder of comparing *official* values of imports with *declared* values of exports—that is, he has compared *quantities* with *values*;—for, as our readers are well aware, the "official" values are records of mere comparative quantities only, the various articles being estimated according to a conventional standard of prices adopted in 1695, and bearing no relation whatever to the actual prices of to-day. But in bringing forward this irrefutable and crushing accusation against Sir Archibald, the reviewer has fallen into the error—probably only a typographical one—of misplacing the words "official" and "declared,"—and affirming in consequence that the historian had before him the *declared* values both of imports and exports for 1849—the fact being that we never had any *declared* values of *imports* at all—nor any "real" values till 1854. The defender in "Blackwood" overlooks this weak point in his adversary's armour—which, however, is not the only one. For the reviewer goes on to

say that, in order to be fair, Sir Archibald ought to have taken the *official* values in both cases, when he would have seen that the exports more than doubled the imports, and that so far from there being a balance against England of 42,000,000*l*, there was actually a balance of 84,000,000*l* in her favour. The fact being that these figures are perfectly futile and misleading for any purposes of *comparison of values* whatever, inasmuch as the *official* prices (on which these figures are calculated) are 100 per cent. more than the actual prices in the case of exports, and only from 15 to 30 per cent. in the case of imports. An honest writer, thoroughly cognisant of the facts of the case, would no more have used the delusive comparison of the reviewer than the delusive comparison of the historian.

But how does the defender of Sir Archibald deal with this grave charge brought against him? He admits it, *but defends it*,—affirming that, as the materials for an accurate comparison did not exist, the historian was perfectly entitled to make the *nearest approximation that he could*, out of any figures he could get,—and he goes on to show (what there need be no difficulty in admitting) that *his* figures differed less widely from the truth than those which would result from the reviewer's method of comparison. But, if this defence is anything except an ingenious after-thought, why did the historian never drop a hint that he was placing side by side figures which could not honestly lie in any such juxtaposition? Why did he not tell his readers, in fact, that his table was only guess-work, and that for purposes of fair comparison, neither his figures nor the reviewer's were worth a farthing?

But this is not all. All three writers fall into the error of regarding an *excess of imports over exports* as indicating a state of affairs unfavourable or menacing to this country. That "Blackwood's Magazine" and Sir Archibald Alison, the only two fossil Protectionists still above ground, should, as in the good old times, go on measuring the *profits* of our commerce by the amount to which the value of the articles we sell exceeds that of the articles which are sent to pay us, is natural enough; but the "Edinburgh Review" ought to have known better. Indeed, the defender of the convicted historian quotes, in the same page which contains all this nonsense about the "balance of trade *against* England," a passage from Porter's "Progress of the Nation" which ought to have enlightened even him. Mr Porter says:—"On the supposition of the correctness of the Custom House "('official') valuation, our foreign and colonial trade *must long* "*since have proved the ruin of our merchants*, since the value "assigned to our exports is enormously greater than that "given to the imports." It would seem to require no explanation to an ordinary understanding that, though it may be more blessed to give than to receive, it cannot be more profitable; and that a trade with all the world, in which we, *regularly, year after year*, send out more than we import in return, to the amount of many millions, must be a losing one, and must show a balance *against* the country truly apalling. But Sir Archibald and his defender (apparently his critic too) have got rooted in their minds the old fallacy that gold alone is wealth, that the excess of exports over imports must ultimately be paid in gold, and therefore that, the larger this excess, the larger also must be the amount of the precious metals received by this country to redress the imaginary balance.

The writer in "Blackwood" gives a table (of which, for a wonder, the figures are accurately quoted from official sources) comparing the *real* value of exports and imports for the four years 1854-7, and bringing out in strong relief a fact to which we have more than once adverted in this journal,—viz., that our imports *habitually* exceed our exports in value by an average yearly sum of from thirty to forty millions:—

TRUE BALANCE OF TRADE as shown by the Real and Declared Values of Exports and Imports, 1854-57.

	Imports, Real Value.	Exports, Declared Value—British Produce and Manufacture.	Foreign and Colonial Merchandise.	Total Exports.	Balance against England.
	£	£	£	£	£
1854	152,389,053	97,184,726	18,636,366	115,821,092	36,567,961
1855	143,542,550	95,688,085	21,003,215	116,691,300	26,851,550
1856	172,544,154	115,820,948	23,393,405	139,220,353	33,323,801
1857	187,646,335	122,155,237	23,353,765	145,509,002	42,139,333
Balance against England in four years					138,882,645

To an ordinary understanding, and at first sight, it might appear as if these thirty-four millions which we receive every year over and above what we send out, was the measure of the *profits* of our foreign trade. But no! in the opinion of Sir Archibald Alison and his defender, it is the measure of our *loss*. We cannot forbear, in conclusion, quoting the explanation given by the writer in "Blackwood" of this discrepancy between the aggregate value of our imports and our exports:—

Had the writer in the "Edinburgh Review" been well acquainted with the subject of statictics, he would have known that the real difficulty of ascertaining the balance of trade now lies, not in respect to the official values of the exports, which are utterly worthless for that object, but in the difficulty of estimating correctly *a certain depreciation which exists both in the "declared" value of the exports and the "real" or computed value of the imports.* The exports are entered at the value declared by the exporter, that is, nearly at the cost price; but they will be sold at a considerably higher rate to give him a profit and pay the freight. Therefore a considerably larger sum of money will be *received* for them than appears in the statistical tables. *On the other hand, the imports are valued in the Custom House at a rate considerably under the price at which they have been purchased.* For them also, therefore, a larger sum of money will be *paid* than the tables show. The difference is larger on the side of the exports (where it includes both freight and profit) than on that of the imports (where it is made up of part of the profit only). To estimate it correctly at present is impossible, from the excessive fluctuations in the foreign trade; goods being sometimes sold at an immense profit, and not unfrequently much below cost price, especially in the *distant* markets.

It is not easy to make out the precise meaning of the author of this confused paragraph. But we beg our readers' attention to the passages we have italicised—the statement contained in which about "depreciation" is the pure fancy of the writer, summoned up to explain to himself a phenomenon which puzzled him. The simple truth is this: the value given for the exports is their (estimated) value at the port of shipment—*i.e.*, with freight to the foreign port, insurance, and profit *excluded*:—in a word, the bare cost of the goods themselves to the merchant who ships them. The imports—so far from being valued by the Customs' authorities (as the writer recklessly and untruly, and without any knowledge of the case, chooses to assert,) "at a rate consider-"ably *under* the price at which they have been purchased"—are valued at the wholesale price (in bond) in England at the time of their arrival—*i.e.*, with freight, insurance, and profit *included*;—and in consequence at a price considerably *above* that at which they were purchased.

THE IRISH EXPERIMENT IN THE TREATMENT OF CRIME.

THE alternations of deep interest and complete apathy with which Englishmen look on their system of penal law are as frequent and startling as those which their interest in the national defences undergo, and arise from the same causes. When we hear of startling crimes,—the systematic replenishment of our criminal population from the convict prisons as the penal sentences of past years expire strikes us with sudden force as a system of suicidal folly. When we hear of the strength of the French army and navy, and hear reports of the threatening words of men in power, the supineness of our own administration comes upon us with startling force, and we look round us for some immediate means of putting forth a spasmodic energy. But the fitfulness of our efforts in the case of our criminal population, if not less natural, is certainly in some ways less excusable than in the case of our national defences. The one sufficient reason why we ought vigilantly to maintain the military and naval preparations of England in an efficient state, is comprehended in the two words, national self-respect. That no doubt is consideration enough, and more than enough,—but there are reasons of a higher order, if not of so wide a scope, for maintaining a constant effort to improve the treatment of our criminal population. The respectable classes owe much no doubt to themselves in this matter. They are at times keenly alive, and they have every right to be keenly alive, to the necessity of pro-

teeting themselves against the dangerous classes—of keeping the predatory profession at bay. But if this be their only motive for attending to the subject, their measures are certain to be selfish, harsh, and ineffectual. No criminal jurisprudence has failed so completely as that which has been conceived exclusively in the spirit of deterring people from crime by the threat of severe punishment. It has had a longer trial than any other system; and all who know what English criminal legislation has effected, know that not even the rose-water philanthropy which professes to regard crime exclusively as a species of misfortune, and to coax the criminal into a better temper, could fail more egregiously to arrest its increase. All our experience shows, and every day is adding evidence of the first importance to the demonstration, that if we think only of making crime unpleasant in the abstract by affixing penalties and stigmas to it, we shall not only fail to reclaim criminals, but fail to inspire that awe of crime amongst those who are not criminals at which we are aiming. Complete justice and mercy to the criminal in the estimate and treatment of crime, so far from decreasing the awe of it, robs it of that romantic interest which the very position of an outcast, at war with a merciless society, is apt to inspire. Every step in the direction of true equity not only gives us the only chance there is of redeeming the guilty, but by far the best chance there is of deterring those who are still innocent. Nothing does so much to deprive crime of its fascinations to the border-classes, as the clear understanding that it is no longer indiscriminately persecuted,—that it is treated with a certain matter-of-fact sincerity.

We have frequently called attention to the noble experiment which has now for some years been made in Ireland, under the masterly and vigorous superintendence of Captain Crofton, to deal with crime in this truthful and equitable spirit. The sixth report of himself and his colleagues in the direction of the Irish convict system is now before us; and we hold very confidently that in the plan which is here further developed, will be found the germs of the only successful method of treating professional criminals. In the recent Irish convict system, and nowhere else in the United Kingdom, every effort has been made not only to bring home to the habitual criminal how wide is the gulf which severs him from the society he has outraged, but, at the same time, to inspire gradually the practical conviction that the gulf is not impassable. He is treated first as a man who has voluntarily and guiltily severed the ties which bound him to the social system,—and made to feel by some months of separate confinement the crushing penalty of that isolation. He is then enabled to regain gradually some self-respect and hope by a treatment which associates him with others, which varies with the varying characteristics of his own conduct, and which enables him to shorten to some extent the duration of the severer penalties. He is permitted at length to work his way into the "intermediate" prisons, where he is no longer a mere prisoner, though still under strict discipline and surveillance. He regains here some sense of personal responsibility, some limited freedom of action, some power of earning resources against the day of his liberation, and some feeling that he is again *trusted* by those whom he respects. And, finally, he is, if he deserves it, liberated some time before the expiration of his sentence, under fixed conditions which ensure a close surveillance during the remainder of his term, and ensure also his recommitment to prison without any fresh conviction in case his liberty be abused and his habits again become disreputable. Now, we submit that this system combines all the true elements which crotchet-mongers of various classes have hitherto taken up in dangerous isolation. It does not ignore retributive justice,—for crime is punished, in the first place, not in proportion to its dangerousness, so much as in proportion to its heinousness and guilt. It does not ignore the deterring end of punishment,—for the industry and effort which are most hateful to the criminal classes as a whole, are made the permanent essentials of prison life and the conditions *sine quâ non* of any ameliorations in the state of the prisoner. It does not ignore the reformation of the offender,—for the main idea of the system is to treat each individual case individually, and to study the influences best suited to awaken remorse and self-respect in individual criminals. And, what is most important of all, it sets to work in the right order, first administering pure penalty, then severe discipline, and only at the last filling the mind of the criminal with hope, and testing it with a gradually accorded and vigilantly measured liberty.

This system has now been applied in all its details for four years and a half, with the following results:—(1) the number of criminals has greatly diminished, although the expedient of getting rid of them by transportation has ceased, and although the number of offences which involve a sentence of penal servitude has been much increased by the Act of 1857, which substituted a sentence of three years penal servitude for punishments which did not bring the offender into convict prisons at all; (2) the cost of the prisons has in consequence diminished considerably in spite of a more elaborate penal machinery; (3) there is reason to believe that a very large number of the criminals treated under this system have been really rescued from criminal habits,—certainly from 70 to 80 per cent.

First, as regards the diminution in crime, we have the following statistics:—

In Custody in Government Prisons in Ireland.

January 1.	Year.	Convicted.	Discharged.
3,983	1854	710	658
3,427	1855	518	820
3,209	1856	389	1,107
2,614	1857	426*	910
2,277	1858	358	946
1,773	1859	322	595
1,631	1860	..	...

* In this year the Act of 1857 came into force, which legalised penal servitude for 3 years for offences which had formerly not rendered the offender liable to be treated as a convict or sent to a convict prison.

Much of this diminution in the number of convicts may be ascribed, no doubt, to the general increase in the prosperity of Ireland, owing to emigration and other causes. But against this must be set, first, that no less than 109 prisoners were last year sent to convict prisons, who, before the Act of 1857, would have been incarcerated only in the county gaols among a less deeply criminal class; and, secondly, that transportation, which before 1854 removed nearly 1,000 criminals annually from Ireland, has now ceased altogether. Next, as to the cost of crime, besides all the saving caused by the cessation of transportation, the convict system has cost less by 28,000*l* last year than it did in 1854. The criminals treated are, no doubt, less numerous by one half,—but the expenditure has been drawn upon for the foundation of the intermediate prisons which have effected so much good. Thirdly: Out of 1,250 convicts who have been conditionally liberated within the last four years, and watched vigilantly during the remainder of their sentences, only 77 licences have been revoked,—that is, about 6 per cent. in four years, or about 1½ per cent. per annum. 854 have been liberated unconditionally in the same period, and of these, 20 have been reconsigned to the convict prisons. Of course many more of these, who have been lost sight of, may have relapsed into crime;—for there is not here any of the direct evidence which is obtained as to the conduct of those conditionally liberated under a revocable licence. And others may be expected to relapse in years to come. But making all allowances for a large margin, there can be little doubt that from 70 to 80 per cent. of the criminals treated under this system are really reclaimed from the profession of criminal pursuits.

Finally, the one great lesson which the study of the great Irish convict experiment *forces* on all thinking men,—which it has forced on the great German jurists, on such men as Mittermaier and von Holtzendorff, as well as on all competent English thinkers,—is this: that the restoration of liberty to criminals should be as gradual, and its results as jealously watched, as possible. The first condition of success is, that the sentences shall be so long as to give room for a conditional liberation of some duration before their final expiration, during which the liberated criminal shall be perfectly aware that he is on his trial, and liable to be recommitted if he gives any reason for the apprehension that he is returning to his old career. Without a considerable period of conditional, revocable, and carefully-watched freedom, the experiment cannot be fairly tried. This is the one element in which the Irish system so far surpasses the English. And this, too, is the one element in which the Irish system is itself capable of improvement, were the sentences of penal servitude lengthened to the same limits as the old transportation sentences, not in order to prolong the time of actual incarceration, but in order to prolong the period of conditional and revocable liberty.

THE NEW STAMP ACT.

TO THE EDITOR OF THE ECONOMIST.

Carlisle, May 13, 1860.

SIR,—Will you kindly inform me whether cheques drawn with an adhesive stamp are within the 12th clause of the New Stamp Act. The use of the word "Bill," and the marginal note, "The payers of foreign bills to cancel stamps," induce me to doubt it.—I am, yours truly, A COUNTRY BANKER.

The clause referred to by our correspondent is as follows:—

XII. Whenever any bill of exchange, draft, or order having thereon an adhesive stamp shall be presented for payment, the person to whom the same shall be presented shall, upon paying the same, write or impress or cause to be written or impressed upon every stamp affixed to the bill the word "paid," to the end that the stamp may be more effectually cancelled, and made incapable of being used again; and in default of so doing he shall forfeit the penalty of twenty pounds.

The above clause was intended to include cheques with an adhesive stamp on them. The marginal note, which is no part of the Act, is misleading. The London bankers stamp the word "paid" on all the cheques with adhesive stamps which they pay,—and the Board of Inland Revenue believe that all bankers may be compelled to do so, notwithstanding the use of the word "Bill."

The annexed correspondence on the new stamp duties has passed between the Victoria Dock Company and the Board of Inland Revenue:—

NEW STAMP DUTIES ACT.

Victoria (L.) Docks, 23 Rood lane, May 3.

SIR,—Will you kindly favour me with a reply to the following queries, as I find considerable diversity of practice with regard to them?

1. Does a delivery order, stamped at issue, and subsequently bearing several endorsements, require a *second* stamp at delivery, if delivered to other than "selves?"

2. Does a delivery order, stamp at issue to a buying broker, and endorsed by that buying broker to his principal, require a second stamp upon that endorsement, the delivery taking place upon that endorsement; if not, what evidence does a warehousekeeper require to have to justify him in dispensing with it?

3. Do warrants issued prior to the Act require a penny stamp when lodged as a delivery order, the warrant being only blank endorsed?

4. Do transfer certificates require a 3d stamp?—I am, &c.,

To the Secretary to the Board of Inland Revenue, Somerset House. C. CAPPER.

Inland Revenue, Somerset House, May 11.

SIR,—I have laid before the Board of Inland Revenue your letter of the 3rd inst., requesting information on certain questions therein submitted under the New Stamp Act, 23rd of Victoria, chap. 15. In answer to the first question, I am directed to inform you that the Board are advised by their solicitor that a delivery order stamped when issued, and passed from one to another by endorsement, requires no further stamp previously to its being executed by the Dock Company, either by an actual delivery of goods to the holder or a transfer of them into his name in their books. Your second question is answered as above. 3. The dock warrant entitling the holder to the goods does not require to be stamped as a delivery order by reason of its having been issued before the passing of the Act, and having therefore no stamp affixed to it. 4. The document chargeable with the duty under the head "Dock Warrant" is described as "a writing or document, by whatever name the owner shall be designated, which shall evidence the title of any person therein named, or his assignee or the holder thereof, to the property in any goods lying in any dock, &c., such writing or document being signed or certified by or on behalf of the company in whose custody such goods may be." The document called a transfer certificate seems to the Board in terms to do this, and if it be not issued for the purpose they are unable to assign it to any office. It is a document issued by the company holding the goods mentioned in it, addressed to the person into whose name the goods have been transferred, certifying the fact of the transfer by virtue of an order from the previous owner, and stating from what day rent will be payable by him.

There is, however, a note upon it, intimating that the possession of this document does not give to any party a property in the goods, it being solely a certificate of the transfer if made in the books of the company. This note cannot be intended to neutralise the certificate. An ordinary dock warrant does not give a property in the goods. The property exists before the deposit, and is not changed by it; but as against the company the warrant evidences the title in the holder of it.

The certificate, the Board apprehend, does the same, and they are advised that it is therefore chargeable as a warrant.—I am, &c.,

T. SARGENT.

The following relates to the new stamp on delivery orders:—

SIR,—We have received the annexed reply from the Inland Revenue Office, to our inquiry relating to the liability of brokers to stamps on delivery orders, containing information which may be useful to parties interested.—We are, Sir, your obedient servants,

11 Lime street, London, May 4. ANNING and COBB.

GENTLEMEN,—The Board have had before them your letter of the 30th ult., requesting information connected with the operation of the recent Act, on a delivery order in the case therein submitted.

In reply, I am directed to observe that as between the buyer and his broker there is no sale or transfer of goods, the transfer of the delivery order, therefore, by the broker to his principal by endorsement is not liable to the duty.—I am, gentlemen, your obedient servant,

T. SARGENT.

Inland Revenue Office, Somerset House, W.C., May 3.

THE FRENCH TREATY.

LETTER FROM MR COBDEN.

THE following letter has been addressed by Mr Cobden to an intimate friend in Manchester:—

Paris, 82 Rue de l'Université, May 12, 1860.

MY DEAR SIR,—I will answer your inquiries as briefly as possible.

I am as strongly in favour of the principle of *ad valorem* duties as any one in Manchester. But nearly all the countries of Europe have, from motives of convenience, or to avoid frauds, preferred specific rates, and the French Government cannot be induced to take for its rule the *ad valorem* system. Nor, indeed, is it invariably desirable; for instance, in the case of iron and some other articles, the English producer prefers specific rates. In goods of a simple and uniform nature, admitting of easy classification, such as yarns and plain cottons, though *ad valorem* duties would be preferable, the adoption of specific rates will not be attended with great inconvenience. If there are other articles of so mixed and varied a character as to defy classification, the treaty has made provision for dealing with them in an exceptional manner.

England is really not in a position to dogmatise on this question. The French Government are of course aware that our own tariff hardly contains an *ad valorem* duty, and that even in recent years we have been engaged in substituting specific for *ad valorem* rates. At this moment the wine-growers of Burgundy are holding meetings to protest against our specific duties on wine, which, owing to the alcoholic test, impose 50 per cent. more duty on their common qualities, costing perhaps half-a-crown a gallon, than on the rarer kinds of claret, which are often worth more than five shillings a bottle in the cellars of the Gironde. My answer to these complaints is that the evil is inevitable, owing to the exigencies of our revenue system. The French Government plead, with equal good faith, the necessities of their Customs service in defence of their specific duties.

With respect to your other inquiry, there is not the slightest foundation of truth for the reports in question. The commissioners now sitting in Paris are not engaged in correcting the imaginary blunders to which you refer. We have no more power than yourself to negotiate for the alteration of a word of the treaty. Our duties are limited to the carrying out of the provisions of the 13th article, in the manner contemplated from the first, and by the only mode in which it could have been accomplished. The task on which the commission has just entered will call for the exercise of much patient labour; and they who wish to pass a fair judgment on its conduct will wait for the result. Speaking only of the past, I will say that from the time when I was first brought into communication with the French Government, now more than six months since, to the present day, I have experienced from them nothing but frankness, straightforwardness, and good faith. They have never professed to carry out at once a free-trade policy to the advanced stage at which we have arrived in England. They are rather at the point of departure from which Mr Huskisson started in 1825, with the great advantage of having had our experience to guide and encourage them, and of having to deal with protected interests very much in advance of ours of that time. The French Government has begun with the repeal of duties on raw materials, giving notice that after a certain time the prohibitive system will cease, and foreign manufactures be admitted at revenue duties which will operate as a protection to home producers. This is precisely the course pursued by Mr Huskisson, and we know with what happy consequences.

The French Government have entered upon this new commercial policy, not for the benefit of England, but from an enlightened appreciation of the advantages it will confer on the people of France; and were I to doubt the success of the experiment, or fear that they will not persevere in the career on which they have entered, I should be faithless to those principles the application of which has conferred such incalculable advantages and blessings on my countrymen. The present treaty will inaugurate a new era in the commercial intercourse of France and England, and it will only require a few years to develop that state of mutual dependence which forms the solid basis for the peace and friendship of nations.

Can it be true that there are sinister influences at work in England, to mar, if possible, this fair prospect? If so, I trust the mercantile, manufacturing, mining, and trading interests of the country will prove true to themselves, for in the present case their interests are eminently those of humanity and civilisation.—Believe me, yours, very truly,

RICHARD COBDEN.

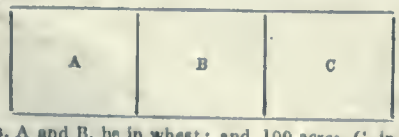
Agriculture.

TILLAGE WITHOUT MANURE.

THE LOIS-WEEDON SYSTEM.

THE proverbial tenacity with which the cultivators of the soil adhere to traditional practices, though often the subject of sarcastic remark, is not altogether without justification. It has been again and again found that modes of culture and management which have proved eminently successful in one district, will not succeed when transferred to another district differing in soil and climate. And the discredit which frequently attaches to well-meant efforts to introduce a new and, as assumed, improved system of husbandry into a district, will generally be found to arise from the improver paying too little regard to the existing practice of the district. The true method of improvement is not so much to change as to elevate and advance the actual system. There is generally a broad basis of truth and reason in the plans of husbandry pursued in each locality, and in all attempts to improve that husbandry regard must be had to such bases.

Of course we do not mean to defend practices which are every-



where too common and always bad; such as defective tillage, insufficient cleaning and manuring, over-cropping and the like, but any system of local husbandry, well performed, should not be hastily cast aside, or altogether changed without full consideration and careful experiment.

Now, there is no doubt that the plan of a "long fallow," formerly universal on strong land once in four or five years, was one which carried with it many advantages, obtained, no doubt, by too great sacrifice, by occasionally thoroughly aerating and pulverising the soil. And may it not be a question whether on many strong and loamy soils as at present managed there is now any effectual substitute for the summer fallow. No one, however, imagines that we can revert to the old system, even on the most tenacious soils. But the question is, may we not otherwise obtain all the benefit, and more than the benefit formerly believed, and rightly believed, to be derived from a well-made "long fallow"? Confessedly the four and five-course rotations are open to useful modifications, and one of the great purposes for which free action on the part of farmers is desired is to afford them the opportunity of working out practically changes in cultivation which times and circumstances may suggest. Amongst the suggestions offered to the modern farmer is that afforded by the Lois-Weedon system of corn and root culture. As our readers are aware, Mr Smith, the author of that system, grows wheat year after year in the same field without manure, by sowing three rows of wheat at 10 inches apart, leaving intervals of 40 inches between each three rows. These intervals receive a most complete summer fallow, being deeply forked or ploughed, scarified, subsoiled, and horse-hoed, so that the land is thoroughly cleaned, aired, and pulverised. The next year the three rows of wheat are planted on the fallowed strip, while the strip which has the previous year borne corn is subjected to the same fallowing process. The wheat is always sown in September, that it may root well and tiller before winter sets in; and the subsidiary operations consist of horse and hand-hoeing between the rows until the wheat is in flower, and then the two outside rows are earthed up by the mould board plough. The result of this system in Mr Smith's hands has been that from 36 to 40 bushels of wheat per acre are grown continuously on what is in fact only half an acre of corn-bearing land, and that the soil has increased, not diminished, in all the elements of fertility. It may be said that the corn is grown on only half the land, but there can be no doubt that the fallowed intervals—little more than three feet between each three rows of corn—do afford to the roots of the growing plants space to expand, and probably food beyond the area actually covered by the growing crop. True it is that Mr Smith's operations are on a small scale, some ten or fifteen acres, but it is obvious that if such a plan can be applied with equal or even proximate success to larger farms, an immense gain is obtained in a large crop of wheat and straw without any expenditure of manure for the purpose. Against that saving must be set the great amount of horse and manual labour which is necessary to such a plan of wheat-growing, and that too at seasons of the year when the other operations of a farm demand the application of such labour.

The Lois-Weedon system has been tried by other farmers with a certain amount of success, while Mr Lawes, at Rothamsted, has tried it and pronounced it a failure.

The most complete exposition of the subject we have seen is that contained in a paper, by Mr J. A. Clarke (of Long Sutton, Lincolnshire), read last week at the London Farmers' Club, wherein the writer enters into all the details of the practices pursued at Lois-Weedon, and gives his own practice in following the same system on an experimental piece of ten acres of land. He states that he commenced with an inferior piece of land, which had been too much exhausted by previous cropping, and that the determined growth of annual weeds the system at first produced had somewhat interfered with success. Still, with these drawbacks, he had for three years grown the average of 26 bushels of wheat to the acre at the cost of 5*l* 4s 2d per acre. The crop of 1858 was 30 bushels to the acre. He anticipates in future greater crops, but estimates his profit on his present average at 3*l* per acre. We cannot follow the details of this able paper, which will well repay careful perusal, and our chief object in adverting to it is for the sake of Mr Clarke's suggestions for carrying the system into practice on a really agricultural scale, and as a regular part of the rotation of a whole farm. After expressing his "unhesitating belief that a yield of more than four quarters—32 bushels—to the acre" may be expected from two successive crops cultivated on the Lois-Weedon plan, Mr Clarke says:—

Now, suppose 300 acres arable to be farmed on a three-course rotation (which, by the way, would be rather a novelty), as represented by the following diagram:—

Let 200 acres, A and B, be in wheat; and 100 acres, C, in other corn or green-cropping. Next year, have B and C in wheat, and A in other produce. The year after that, C and A in wheat, and B in other produce. That is, each division would be one year occupied by a variety of cropping; the next year it would be under Lois-Weedon wheat rows; the third year, again under wheat sown between the stubble-stripes of the former crop; and then broken up for the various cropping. The assumed yield of 32 bushels would give a clear profit (including interest) of 3*l* 10s per acre, with the expenses already stated, and wheat at only 40s a quarter. The 200 acres of wheat would thus bring 700*l* net annual income. Then, as no manure is required for the wheat, the other 100 acres would have the benefit of all the straw from the 200 acres; and with this large quantity of straw for manure, enriched with corn and cake as in present practice, there would be a chance of a good profit also from the produce of this division. The result, then, is a clear surplus—say of 800*l* to 900*l*, over and above all expenses, on 300 acres of land, when wheat is down at 40s.

There may be difficulties in the way of such a system of husbandry; but the principal one, that of having so much horse-work to be done in the wheat field at seasons when other crops require their labour, is already obviated in anticipation by the steam trench-plough and grubber. And of course I do not set up this threefold rotation as advisable beyond all others; nor do I preclude the use of artificial manures for the triple-row wheat, seeing that more than 40 bushels per acre may stand and ripen on the land (as at Lois-Weedon); and provided you do not overdo the crop in luxuriance, guano or nitrate will pay handsomely for their use here as well as in ordinary farming.

Assuming that as good or better crops of wheat can be grown upon the Lois-Weedon system as upon the ordinary plan of wheat-cropping, it is not improbable that such a rotation as that suggested would prove highly profitable to the tenant and very beneficial to the landlord. The successful practice of the Lois-Weedon plan involves the necessity of having the land first well drained, should the natural drainage be insufficient, and of thoroughly clean cultivation, two things which go far to secure on reasonably good wheat land a crop of four quarters to the acre. If then from 50 to 75 acres of the 100 acres not bearing wheat be every year cropped with roots, well manured and subsequently well managed, there will be from one-sixth to one-fourth of the land every year under the best possible course of renovation by fallow crop. The real question appears to be, whether, taking it altogether and for a series of years, the plan of "long fallowing" alternate strips of land affords such additional benefit to the wheat crop as to compensate for the extra cost beyond the outlay necessary to grow two successive wheat crops by the ordinary method? Mr Clarke's suggested plan would be applicable to either method of wheat-growing. We know by experience that on a strong loam thoroughly pulverised by deep ploughing in alternate years, and kept quite clean, a good crop of wheat can be secured by manuring heavily once in four years. For instance, a rotation of (1) roots, well manured and removed from the land, followed by (2) oats, (3) beans, and (4) wheat, without more manure, has for several years produced very heavy yields of oats and beans, and the *average* of very nearly 40 bushels, or five quarters of wheat to the acre. Indeed, but for last year, when from the great growth of straw the crop was early and much lodged and the yield reduced to little more than 35 bushels to the acre, the average produce of the wheat for the last five years would have exceeded 40 bushels per acre. We are, therefore, quite satisfied that tillage will go far to produce grain crops of great weight without such frequent applications of manure as it has of late years been the fashion to consider necessary. Of course this is most applicable to loams and land of good staple, the very light soils being those most benefited by moderate and frequent dressings. These points, however, present a wide field for the efforts of the observant and enterprising farmer, and indicate most forcibly the impolicy of restrictive covenants and preordered courses of cropping as parts of the contract for the occupation of his farm.

A HINT TO HIGHLAND LAIRDS.

LOSSES OF SHEEP.

An Invernessshire correspondent of the *North British Agriculturist*, writing on the 7th May instant, says:—"This winter will be especially noticed from the dearth of fodder, and where supplies have been brought from Holland, a ton brought within these two weeks on the Highland road 15*l*. How it fares with the sheep is not yet accurately known, but clipping time will disclose. In exposed situations one out of three will be out of count. In favoured parts 7 per cent. will scarce cover losses against such rigours." So we learn that the lambing season in the Southern Highlands of Scotland, according to the *Dumfries Standard*, has been most unfavourable. "The winter only lately passed away," says the report, "has been most disastrous. But for Dutch hay, which has come in in large quantities, much of the stock of the country would have died from starvation. In the lower districts, *with the aid of grass fields* and artificial food, the loss of old sheep may not be the average of years, and the crop of lambs not 8 or 10 per cent. below that point. But in high sheep ranges, such as the sources of the Tweed and Teviot, the Ettrick, the Yarrow, and the district around St Mary's Lake, the loss in old sheep is, in some cases, 15 or 20 per cent., and lambs are the exception rather than the rule. On a large farm recently let at a ruinous rent, and for which there was not only a keen but a mad competition, the loss in old sheep is very great, and on some farms in the range referred to not a lamb is to be seen." Here we have examples of that system of so-called improvement in the Scotch

Highlands, under which all the small cultivators are expelled, and a wide district is thrown into an immense sheep farm, wherein the sheep are dependent throughout the year on the natural produce of the farm, though the old Scotch farmer always made a careful winter's provision for his sheep. There is little if any hay saved, and no turnips grown for winter provender. The land is undrained, and nothing beyond the rudest plans of pastoral husbandry are adopted by the occupiers. They depend altogether on the season, suffering in winters like the season we have just passed through very severe losses. Of course considerable capital is required by the tenant to stock such a farm, often extending over several thousand acres, but on the part of the landlord no outlay is needed beyond the expense of ejecting the crofter tenants, and perhaps some trifling subscription towards the cost of sending them to Canada.

Yet on all these Highland sheep farms there are tracts of land, more or less extensive, on which corn and turnips might be grown with advantage, provided the landlord would expend a reasonable sum in the necessary buildings, drainage, and other permanent improvements. Not only might larger flocks of sheep be thus kept in these Highland districts, but the present perils of a severe winter would be greatly diminished to the sheep-farmer, while many of the crofters might be profitably employed as labourers in tillage husbandry as an adjunct to sheep farming.

Literature.

CEYLON: An Account of the Island, Physical, Historical, and Topographical; with Notices of its Natural History, Antiquities, and Productions. By Sir JAMES EMERSON TENNENT, K.C.S., LL.D. Fourth Edition thoroughly revised. Longman, Green, Longman, and Roberts.

(SECOND NOTICE).

LITTLE positive is known about the earliest inhabitants of Ceylon. Some have conjectured that they belonged to the Malayan race; others, to whose opinion Sir Emerson Tennent inclines, that they formed "a branch of the same stock which originally colonised the Dekkan." Like the latter, they were a timid and barbarous race, dwellers in mountains and forests, worshipping snakes and demons; and hence they themselves afterwards acquired from their conquerors the name of snakes and devils. The "Mahawanso," a native metrical history of great antiquity, recently brought to light by the indefatigable researches of Mr Turnour, speaks of the early kings as building their great public works by the labour of men and *devils*,—an assertion startling at first sight; yet not so much to be wondered at, if, in addition to their demon-worshipping propensities, the ancient Singhalese at all resembled their devil-dancing descendants of the present day as depicted in a little sketch in the second volume of this work.

In the South-eastern extremity of the island there still exists a race (the Veddahs) who are thought to be lineal descendants of the despised "Yakkos." They retain many of their customs and superstitions, and their rude mode of life unchanged; unless, indeed, the latter has even degenerated under a sense of subjection and degradation. They live by the chace, making use of bows and arrows, build no houses, and have no form of worship, unless the propitiatory dances to demons may be called such. If they have any commercial dealings with their fellow islanders, it is done thus:—"They deposit in the night" (in a certain known locality) "the articles which they are disposed to part with, indicating by some mutually understood signals, the description of those they expect in return, and these being brought on the following day to the appointed place, disappear during the ensuing night."

In the year B.C. 543, a small band of invaders from the opposite shore, led by Wijaho, "the discarded son of one of the petty sovereigns in the valley of the Ganges," landed on the coast of Ceylon, and speedily reduced the whole island to submission. They then founded, in the person of their leader, a dynasty that lasted in undiminished power for nearly eight centuries, when it was followed by a succession of less powerful kings known under the title of the second dynasty. The last of this race, a monster of cruelty, was conquered and dethroned by the British in 1815. The splendour of the earlier kings and the prosperity of the island under their rule are attested by the accounts of Arabian, Chinese, and later on of European travellers, as well as by native historians. "So late as the fourth century, the Chinese traveller, Fa-Hian, describes the condition of the place" (the capital city, Anarajapoora) "in terms which fully corroborate the accounts of the Mahawanso. It was crowded, he says, with nobles, magistrates, and foreign merchants; the houses were handsome, and the public buildings richly adorned. The streets and highways were broad and level, and halls for preaching and reading *bana* were erected in all the thoroughfares." Even now,

For miles around Anarajapoora the surface of the country is covered with remnants and fragments of the ancient city; in some places the soil is red with the dust of crumbling bricks; broken statues of bulls and elephants, stone sarcophagi and pedestals, ornamented with grotesque human figures, lie hidden in the jungle; but the most surprising of all is the multitude of columns, "the world of hewn stone pillars," which excited the astonishment of Knox when effecting his escape from captivity.

If anything else were needed to assure us that Ceylon was at one time a thickly-peopled and prosperous country, considerably advanced in social status, it would be found in the stupendous reservoirs for artificial irrigation that lie scattered over the interior. The total absence of lakes in Ceylon, and the liability of the rivers to summer droughts, rendered such works a necessity for the well-being of the country. By their aid, lands now wild with jungle and forest raised rice sufficient for the support of their inhabitants, and industry and plenty reigned where now is only desolation and decay. Kings in the early ages were esteemed according to the number and greatness of "these works of public utility" they constructed; and Sir J. Emerson Tennent urges upon the attention of the Government the great material advantages, and the increase of popularity among the natives, that would be gained by repairing these tanks—an undertaking in most cases feasible, and only involving an outlay that would be well repaid by the results.

The following extract gives so forcible a picture of the wilder scenery of Ceylon, and so striking a description of one of these vast works (worthy to be compared to the Pyramids in the amount of labour it must have involved), that we are tempted to give it almost entire in spite of its length:—

Before daybreak we entered on the bed of the tank of Padivil, at its south-eastern angle, and proceeded towards the main embankment, a ride which occupied us nearly two hours. The tank itself is the basin of a broad shallow valley, formed by two lines of low hills, which gradually sink into the plain as they approach towards the sea. The extreme breadth of the enclosed space may be twelve or fourteen miles, narrowing to eleven at the spot where the retaining band has been constructed across the valley; and when this enormous embankment was in effectual repair and the reservoir filled by the rains, the water must have been thrown back along the basin of the valley for at least fifteen miles. * *

In a lonely spot, towards the very centre of the tank, we came unexpectedly on an extraordinary scene. A sheet of still water, two or three hundred yards broad and about half a mile long, was surrounded by a line of tall forest trees whose branches stretched above it. The sun had not yet risen when we perceived some white objects seated in large numbers on the tops of the trees, and as we came nearer we discovered that a vast colony of pelicans had formed their settlement and breeding place in this solitary retreat. They literally covered the trees in hundreds; and their heavy nests, like those of the swan, constructed of large sticks, formed great platforms sustained by the horizontal branches. In each nest were three eggs rather larger than those of a goose, and the male bird stood patiently beside the female as she sat upon them. Nor was this all. Along with the pelicans prodigious numbers of other large water-birds had selected this for their dwelling place, and covered the trees in thousands, standing on the topmost branches: tall flamingoes, herons, egrets, storks, ibises, and other waders. We had disturbed them thus early, before their habitual hour for betaking themselves to the fishing-fields. By degrees, as the light increased, we saw them beginning to move upon the trees; they looked around them on every side, stretched their awkward legs behind them, extended their broad wings, gradually rose in groups, and slowly soared away in the direction of the sea-shore.

The pelicans were apparently later in their movements; they allowed us to approach as near them as the swampy nature of the soil would permit; and even when a gun was discharged among them, those only moved off which the particles of shot disturbed. They were in such numbers at this favourite place, that the water over which they had taken up their residence was swarming with crocodiles attracted by the frequent fall of the young birds; and the natives refused, from fear of them, to wade in for one of the larger pelicans which had fallen, struck by a rifle ball. It was altogether a very remarkable sight.

About seven o'clock we reached our destination, near the great breach in the embankment, having first effected a passage with difficulty over the wide stream that was flowing towards it from the basin of the tank. The huge bank was concealed from sight by the trees with which it is overgrown, till suddenly we found ourselves at its foot. It is a prodigious work, nearly eleven miles in length, thirty feet broad at the top, about two hundred at the base, upwards of seventy feet high, and faced throughout its whole extent by layers of squared stone. The fatal breech through which the waters escaped is an ugly chasm, two hundred feet broad, and half as many deep, with the river running slowly below. This breach affords a good idea of the immense magnitude of the work, as it presents a perfect section of the embankment from summit to base. As we stood upon the verge of it above, we looked down upon the tops of the highest trees; and a pelican's nest, with young birds, was resting on a branch a considerable way below us. * * * *

The existing sluice is a very remarkable work, not merely from its dimensions, but from the ingenuity and excellence of its workmanship. It is built of layers of hewn stones, varying from six to twelve feet in length, and still exhibiting a sharp edge and every mark of the chisel. These rise into a ponderous wall immediately above the vents which regulated the escape of the water; and each layer of the work is kept in its place by the frequent insertion, endwise, of long plinths of stone, whose extremities project beyond the surface, with a flange to key the several courses, and prevent them from being forced out of their places. The ends of these retaining stones are carved with elephants' heads and other devices, like the extremities of Gothic corbels; and numbers of similarly sculptured blocks are lying about in every direction, though the precise nature of the original ornaments are no longer apparent.

We scarcely know which is most astonishing, the abundance and variety of animal life in Ceylon, or the luxuriance of its vegetation. Sir Emerson Tennent's glowing descriptions, and the curious and amusing anecdotes he has amassed, are perhaps the most attractive

parts of his book. The character and habits of the elephant in particular have never before been so attentively studied, or put in so favourable a light. There is something quite engaging in the mingled sagacity and simplicity, the mildness and the strength of this huge beast: we at length take his part against his captors, and still more against those who slaughter him for sport. In spite of the damage that the large herds that shelter in the forests during the day do to the rice lands and coffee plantations in the vicinity, and in spite too of an occasional "rogue" or outcast, who revenges his desolation by lying in wait in waste places to kill passing travellers, and delights in doing all the mischief in his power, we cannot read without regret that 3,500 were destroyed in the Northern province alone in the course of three years, or that one officer—Major Rogers—killed upwards of 1,400. Nothing can be more grotesque and at the same time more pathetic than the attitudes of the newly-captured prisoners in a "corral," as given in Sir Emerson Tennent's capital illustrations. We cannot give our readers the picture, but we can the scarcely less vivid description:—

Amongst the last that was secured was the solitary individual belonging to the fugitive herd. When they attempted to drag him backwards from the tree near which he was noosed, he laid hold of it with his trunk, and lay down immoveable. The temple tusker and another [decoys] were ordered up to assist, and it required the combined efforts of the three elephants to force him along. When dragged to the place at which he was to be tied up, he continued the contest with desperation, and to prevent the second noose being placed on his foot, he sat down on his haunches, almost in the attitute of the "Florentine boar," keeping his hind feet beneath him, and defending his fore feet with his trunk, with which he flung back the rope as often as it was attempted to attach it. When overpowered and made fast, his grief was most affecting; his violence sunk to utter prostration, and he lay on the ground, uttering choking cries, with tears trickling down his cheeks.

Exquisitely amusing is the account of the two young elephants included in the same "corral," who were the most vicious of any, brandishing their little trunks aloft, and attacking every one who came within their reach," but who, like other youngsters, could not resist the temptation of "prog," but "in the midst of all their agony and affliction seized upon every article of food that was thrown to them, and ate and roared simultaneously."

We must resist the temptation of dwelling longer upon these and other scenes in the forest life of Ceylon, and pass on to a brief glance at its more cultivated aspect. At one time, as we have said, Ceylon was rich in rice-fields; now, for lack of water, that branch of industry has fallen into decay, and rice has to be imported from India, to the great detriment of the island, whose rich soil lies waste. Cinnamon, the chief export of old times, and the bone of contention between Portuguese and Dutch, has ceased to be of much importance since other countries have competed in its production. Precious stones are still to be found in considerable numbers in the mountain regions, but the search for them is desultory, and chiefly taken to by the idle and lawless. Tea and cotton have been successfully grown, but the cultivation of these shrubs languishes for want of proper means for their preparation for the market. Cocoa-nut palms are extensively grown, and produce, in the oil, coir, and cordage manufactured from them, valuable articles of commerce. Fish are plentiful on the coasts, and fishing forms the occupation of a caste among the natives; who, however, for the most part content themselves with raising enough for their own support from small patches of garden ground, or with the care of their palmyra and cocoa palms, and cannot be induced to lend their labour to the grand production of the island, the one to which it owes its modern prosperity, and to which it looks for future importance. The coffee plantations of the interior are entirely dependent on foreign labour, and their growth is much checked by the difficulty of procuring it.

The cultivation of the coffee plant was introduced by the Dutch in or about 1690. Before that date it was indeed grown by the Singhalese, but only on account of its lovely flowers for the adornment of their temples, and of its young leaves as an ingredient in their curries. The experiment of the Dutch proved a failure and was given up; but the natives, having learnt this fresh use of the plant, continued to grow it in small quantities as they do at an increased rate to the present day. When the English expelled the Dutch, they experimented upon what crops would prove most suitable to the soil. Indigo was tried and abandoned; the sugar cane was but partially successful; but from one garden of coffee shrubs formed by the Governor, Sir Edward Barnes, on his upland estate at Gangarooroa in 1825 has arisen the net-work of plantations that overspread the sides of the hills, and at the time Sir Emerson Tennent writes (in 1857) the exportation of 67,453,680 lbs of coffee. The history of the early successes of coffee-planting, the mania for speculation that ensued upon it, and the subsequent crash,—of the present less brilliant, but more real and steady progress,—of the risks and discouragements that encounter the planter at every turn, from want of labourers and of roads, from the destructive rat or more destructive coffee bug,—accompanied as it is by a map of the coffee districts,—is one of the most important divisions of Sir James Emerson Tennent's valuable work.

LIFE OF EDMOND MALONE, EDITOR OF SHAKSPEARE. With Selections from his Manuscript Anecdotes. By SIR JAMES PRIOR, M.R.I.A., F.S.A., &c., Author of "The Life of Edmund Burke," "Life of Oliver Goldsmith," &c., &c. Smith, Elder, and Co.

As a passable collection of trivial gossip and third-rate anecdotes appertaining more or less remotely to the literary circles of the latter part of the 18th century, this book may have interest for some readers, but as a biography its claims to attention are of the very slightest kind. Sir James Prior, in the somewhat laboured exordium in which he attempts to vindicate his task, furnishes small justification for the large octavo volume here presented to the public. In an admirable example of the "Who drives fat oxen, &c.," style of reasoning he urges, "He who has expended learning and industry in making known the lives and labours of others, deserves the record he bestows. It forms a debt of honour, if not of gratitude, which literary men are bound to bestow upon each other." We have all an interest in resisting the admission of this principle, for the consequences of its being acted upon are really dreadful to contemplate. Only fancy our having to look forward to the biographies of all the estimable men now "expending learning and industry" in the reading room of the British Museum "in making known the lives and labours of others." Biography of biographers, all would be biography! Since the celebrated proposal of a "Mutual Testimonial Society," we have met with no design against the peace of mankind so comprehensive and appalling as this.

"Of his own career I found little," Sir James Prior vaguely says, speaking of Malone. The assertion is fully borne out in the sequel. Malone's letters appear to have been mostly destroyed or lost, and those which are given in this biography do not awaken any very poignant regret on that account. There seems, in truth, to have been nothing remarkable, either in his character or his circumstances, and Sir James Prior is the very opposite to that sort of biographer, now and then, though rarely, to be met with, who, by psychological insight and descriptive power, can give interest to the life of a commonplace man. But Malone lived in good literary society, and there are occasional notices of eminent men which interest us, because *anything* about them interests us to a certain extent, however maundering, trite, or twaddling it may be. Take the following about Horace Walpole:—

"When Mr Horace Walpole came from abroad about the year 1746, he was much of a Fribble in dress and manner. Mr Colman, at that time a schoolboy, had some occasion to pay him a visit. He told me he has a strong recollection of the singularity of his manner; and that it was then said that Garrick had him in thought when he wrote the part of Fribble, in 'Miss in her Teens.' But I doubt this much; for there is a character in a play called 'Tunbridge Wells,' in which that of Fribble seems to be evidently formed. However, Garrick might have had Mr Walpole in his thoughts.

"This gentleman (Mr Walpole) is still somewhat singular in manner and appearance; but it seems only a singularity arising from a very delicate and weak constitution, and from living quite retired among his books, and much with ladies. He is always lively and ingenious; never very solid or energetic. He appears to be very fond of French manners, authors, &c., &c., and I believe keeps up to this day a correspondence with many of the people of fashion in Paris. His love of French manners, and his reading so much of their language, have I think infected his style a little, which is not always so entirely English as it ought to be. He is, I think, a very humane and amiable man.

"He regrets much that he wrote the tragedy of the 'Mysterious Mother;' he printed only a hundred copies of it at Strawberry Hill, and cannot be prevailed upon to suffer it to be published. But it is in vain now to think of suppressing it, for these one hundred copies being dispersed immediately after his death it will certainly be reprinted. No work of his does him more credit.

"He has printed, I believe, at his own press a complete edition of all his writings in quarto. On examining the late Mr Cole's papers, a sheet of this new edition was found among them, which he took (it is imagined) without the knowledge of Mr Walpole from Strawberry Hill."

Here are some extracts taken at random from the "Maloniana," which form a considerable portion of the work:—

Dr Warburton had scribbled a good deal in many other of his books. He bequeathed them, I think, to be sold for the benefit of the Bath Hospital: but his wife having notice of it, and the old man being for the two or three last years of his life in nearly a stage of dotage, she disposed of them in his lifetime, if I mistake not, to Payne, the bookseller, and they are now dispersed.

April 15, 1788.—Mr Courtenay happening to dine yesterday with Lord Lansdown, took occasion to mention the 'Harley Papers' which his lordship was said to have bought from the executors of Mr West. The fact was so; but the much-talked-of letter of the Duke of Marlborough was not among them. Lord Lansdown said that Harley intended at first to have sent the original letter to Lord Duplin, but on second thoughts substituted an exact copy, lest the duke should destroy the original. When this *copy* was shown to the duke, he desired it might be given to him, and is supposed to have destroyed it.

We really find it difficult adequately to express the *negative* character both of the biography and its subject. We know that to some of our readers we shall have conveyed very little idea of either: we have not stated that Malone was born in Ireland in 1741; went to Trinity College, Dublin, was called to the bar in 1767; settled in London in 1777; in 1795 wrote to Dr Parr for an epitaph which Dr Parr had promised for Johnson's monument; heard from Dr Parr that he would soon be in town; replied "by

inclosing a proposal from Sir William Scott, implying some difference of opinion as to the language employed, which produced cessation of correspondence for more than a month;" then "resumes his pen at greater length, fortified by the opinions of the club that certain alterations should be made in order to suit the general views," &c., &c. To such readers, and to such only, we strongly recommend the book itself.

The Boy's Play Book of Science. Including the various Manipulations and Arrangements of Chemical and Philosophical Apparatus required for the Successful Performance of Scientific Experiments, in Illustration of the Elementary Branches of Chemistry and Natural Philosophy. By John Henry Pepper, late Professor of Chemistry at the Royal Polytechnic. Routledge, Warne, and Routledge, Farringdon street.

There are probably few boys who are not at one time or another seized with a passion for chemistry, which drives them, at the imminent peril of eye-brows and fingers, and with "terrible pecuniary losses in retorts, bottles, and jars," to dabble deep in experiments, to the discomposure of maternal feelings, and the discomfort of domestic arrangements in general. A "Boy's Play Book of Science" is sure, therefore, of a wide and appreciating public, and in the present case it well deserves to find one. The abundant experiments this book contains are fully and clearly explained, and lead up from the simpler to the more complex in a lucid and satisfactory series. We must, however, mention that it is not, even in its earlier portions, suited to very young beginners, unless they are sufficiently advanced in other studies to comprehend the scientific facts on which these experiments are based, and the scientific terms by which they are illustrated and explained. The author, in his preface, states that he has been induced to compile his work from the frequent applications he has received from former attendants on his lectures for explanations as to the mode of performing different experiments that have struck their fancy; and he now offers it to the public in the hopes of leading his readers on "gradually from the easy reading of the present 'Boy's Book,' to the study of the complete and perfect philosophical works of Faraday, Brande, Graham, Turner, and Fownes.

A Man's Heart. A Poem. By Charles Mackay. Smith, Elder, and Co.

Dr Mackay's reputation as a poet will not be increased by the publication of this, his latest poetical effort. We cannot call it a poem, though its writer, following established usage, challenges for it that title. It is, at best, a narrative in verse, and, to our thinking, a dull narrative in indifferent verse. If it were, in any true sense of the word, a poem, we should not care to find fault with its story for either improbability or want of interest. Lyric poetry is not, like dramatic poetry, bound by strict rules of art; its writer may follow his imagination, even if it lead him away from his principal theme; or out of a mere nothing as to incident, he may build up a song that the world will not willingly let die. In narrative poetry, again, such as Scott's, where the excellence lies rather in the vivid life and action of the story, in the way in which an interesting plot is set off with all the wealth of a fertile fancy, than in poetic beauty of thought or of expression, the verses are little more than an ornamental setting to the tale, and, if spirited and good, can dispense with being of the highest order of poetry. In "A Man's Heart" we have neither one thing nor the other,—neither lyric beauty nor the charm of a well-told romance. Dr Mackay has been praised for "singing healthily," and much in his former writings is deserving of the praise; why, then, does he here hold up to view such a weak, morbid, passionate thing, and call it "A Man's Heart"? We should be sorry to look upon it as such in any representative light, and think the spectacle, taken as an individual portrait, far from edifying. It seems to be a cross between Byron's heroes and the lover of "Maud." To love with a vague and dreamy love, chiefly shown by weaving flowers and verses,—to rush headlong, when disappointed, into the "the great whirl and Maelstrom of the town,"—to "live a life of lightning," whatever that peculiar mode of existence may be,—to hate the weak girl who has forsaken one—then to come round in violent reaction and again adore her,—to be haunted, when she dies, by

> A dark presentiment that he should die
> When he had ended an appointed task,—

to accomplish, accordingly, that important task, the painting a portrait and the composing of much dismal verse,—and then to die after the following sentimental fashion:—

> And when at last
> The work was done, and art could do no more,
> His mournful prophecy of love and grief
> Fulfilled itself: and breathing the one name,
> He laid his head upon his father's breast
> And clasped the sympathising hand, and died:—

if this is Dr Mackay's notion of what "A Man's Heart" either is, or ought to be, it is not ours.

The Art-Journal. May, 1860. Arthur Hall, Virtue, and Co.

Greuze's powers of rendering the simple grace and unconscious beauty of early girlhood are well known to all who have seen the famous "Broken Pitcher" in the Louvre collection. The same qualities he has given with equal success in a picture called "Simplicity" in the Royal collection, and which is beautifully engraved in this number of the Art-Journal. It represents the head and bust of a young girl, dressed in a very picturesque costume; the sweetness of the countenance, the tenderness of the half-gazing, half-abstracted eyes, and the simple beauty of the youthful figure, are given with unrivalled grace. The two remaining engravings give us a Belgian picture by Baron Wappers, rather hard and stiff in drawing, but displaying strength and character, called "The Ommeganck at Antwerp," and a statue of "Ganymede" by E. S. Bartholomew, a young American who died in 1858 while studying in Rome; there is a great deal of promise in the figure. Of woodcuts, besides those illustrating South Wales and the Hudson river, we have several of Mr Dobson's pictures which are familiar to visitors of the Royal Academy during the last few years, several scenes from a new illustrated edition of the Waverley Novels, and copies of a few of the Londesborough antiquities, curious specimens of antique plate.

The Stamp Acts Considered and Simplified. A pocket digest of Stamp Duties chargeable in the United Kingdom, condensed under each head of Duty, with general directions on stamped instruments, regulations for stamping executed instruments, and for allowance of spoiled stamps, and an Appendix containing tables of Stamp Acts, *ad valorem* duties, &c. Fourth Edition. Vacher and Sons. 1860.

This is a very timely and useful publication. Our readers are aware that the New Stamp Act has given occasion for innumerable questions which it is the object of the changes made in this fourth edition of the work before us to solve.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The Legislative Body has commenced the discussion of the bill relative to the reduction of duties on sugar, coffee, cocoa, and tea. The debate thus far has presented nothing remarkable. The opponents of the bill have attacked it with the common-place arguments which are urged against every financial reform,—namely, that the measure is inopportune, that the Government can ill afford to lose the diminution of revenue it will occasion, that it will not be of any great advantage to consumers, and so forth. But, in spite of all that may be said against it, the bill will be adopted, and by a very large majority too. It fixes the duty on native sugar at 25f the 100 kilogs (2 cwts); on colonial and foreign sugar imported by French vessels, at from 25f to 34f; and on all imports by foreign vessels, at 39f; on coffee the duty is to be 30f to 50f the 100 kilogs by French vessels, 55f by foreign; on cocoa, 20f to 35f by French vessels, 40f by foreign; on tea, 75f to 90f by French vessels, 100f by foreign. The bill, however, enacts that up to the 30th June, 1866, French colonial sugar shall continue to enjoy the reduction of 3f the 100 kilogs accorded by a law of 28th June, 1856; and that the proposed duties on tea shall not, as regards the imports by foreign vessels, come into operation before the 1st May, 1866. Certain concessions also are made to coffee from India and other places put on board French ships previous to the 1st June, 1860.

The Superior Council of Commerce, which, as you are aware, has been charged to fix the duties to be imposed on British productions imported into France under the treaty, has since my last held sittings; and those sittings have been devoted to the question of the duties on iron. The ironmasters are, as was to be expected, making a desperate effort to obtain the uttermost farthing of the 30 per cent. *ad valorem* duties up to 1864, and 25 per cent. afterwards mentioned in the treaty; and for that purpose are overwhelming the Council with statements and statistical tables, destined to show that, with a lower protection, French ironworks

must be ruined. The cotton-spinners, the cutlers, and others mean, it is announced, to take up similar ground with regard to their several branches of manufactures. These people are besides, it appears, labouring to convince the Council, the Legislative Body, the Ministers, and other people in authority, that if the 30 and 25 per cent. duties were to be imposed on all British articles the English would have nothing to complain of, inasmuch as the treaty would be strictly and honestly fulfilled. But I see with pleasure that a writer in the *Journal des Débats*, speaking apparently under what the French call "inspiration," energetically combats this extravagant pretension, and maintains that it cannot be admitted without a violation of good faith to England. "It is evident," says the writer, "to every man of sense, that the English negotiators of the treaty, when they consented to the entire abolition of duties on French manufactures imported into England, must have asked for and obtained explanations as to the manner in which France would act in regard to the said *maxima* duties of 30 and 25 per cent. *ad valorem*. It is impossible that that point should not have been long discussed, for there was nothing more important in the negotiation. The negotiators on both sides were too well informed not to know that in nineteen cases out of twenty duties of 30 and 25 per cent. are equivalent to prohibition: and, consequently, *it must have been clearly explained that the duties of 30 and 25 per cent. would be the exception and not the rule.*" This important declaration will, without doubt—in spite of all the Protectionists can do—be honestly acted up to by the Council.

Among the numerous objects mentioned in the treaty, are machinery and mechanical instruments, and the new duties which are to be fixed on them are to come into operation not later than the 31st December of the present year (Art. 15). The Government has, in compliance with the wish generally expressed, presented a bill to the Legislative Body which enacts that machinery ordered abroad before the 15th January of the present year shall be allowed to be imported at the new duties which may be adopted. The existing duties are, however, to be paid on imports being made, but the difference between them and the new duties is to be reimbursed.

The *Annuaire de l'Economie Politique et de la Statistique pour* 1860 has just been published by Guillaumin and Co. It is the 17th volume of the series; and, excellent as the sixteen others were, is more complete and valuable than they. The first and largest divisions of the work are set apart to France; and in it we find the latest statistics respecting the population, the commerce, the shipping, the budget, the national debt, the army, post office, telegraph, and criminal, civil, and commercial justice; also accounts of the operations of the savings banks, the Bank of France, the Discount Bank, and other great financial establishments; a list of laws and decrees on financial and commercial subjects recently promulgated; and numerous other matters. The statistics are drawn from official sources, are most carefully digested, are set forth with admirable clearness, and are accompanied with grave and learned disquisitions. Altogether they give, in a narrow space, a more complete and more correct idea of the material and moral condition of France than could be obtained from months' studies of official documents, of newspapers, magazines, and books. The rest of the volume contains the latest statistics respecting the population, budgets, commerce, public debts, &c., of every European and American State, and of some of Asia and Africa; an account of the discussions of the Academy of Moral and Political Sciences, and of the Society of Political Economy of Paris, and an admirably-written review, by M. Maurice Block, of the principal economic events of the last year in France, England, and America. From this brief description of the contents of the *Annuaire*, your readers will see that the work is one which is indispensable to all who, as merchants, as politicians, or as writers, have to occupy themselves in any way with the material interests of different countries. The editors of this valuable annual are Messrs Block and Guillaumin, and the highest credit is due to them for the industry and sagacity with which they have executed their task.

For some time past the receipts of the railways have presented a decline, compared with the corresponding periods of last year. For the week ending the 5th May, the last made up, the decline was nearly 12 per cent. per kilometre on the Eastern line, compared with the same week of 1859; nearly 14¼ per cent. on the Orleans line, nearly 26 per cent. on the Mediterranean, nearly 9¼ on the Western, nearly 3 on the Northern, 16½ on the Lyons to Geneva, rather more than 32 on the Dauphiné. On the Southern, on the contrary, there was an increase of a little more than 4¾.

The Legislative Body, in one of its recent sittings, passed a bill authorising the Credit Foncier Company to execute for what is called the Sous Comptoir des Entrepreneurs de Batiments (a sort of bank for builders and others engaged in the building trade) the operations formerly done by the Discount Bank. The Credit Foncier is to discount for the Sous Comptoir bills bearing its endorsement for an amount not exceeding 330,000*l* sterling a year, at the rate of the Bank of France, with 1 per cent. for commission, and the Sous Comptoir is to transfer to the Credit Foncier as security three-fourths of its capital and also the guarantee to the amount of 100,000*l* English given by the Government. This transaction will increase considerably the business of the Credit Foncier, and it will at the same time give facilities to the builders which they were unable to obtain from the Discount Bank.

At a meeting of the shareholders of the Caisse Generale des Actionnaires, an enterprise got up by M. Millaud of speculating notoriety, the losses for the year 1859 were stated to be 1,690,889f!

The shareholders of the famous Isthmus of Suez Canal have also held a meeting. The report read attacked the English Government for its opposition to the enterprise, and praised the French Government for supporting it. It stated the outlay made by the Company, including that for preliminary surveys, at 9,009,000f, and that the disposable resources are 37,000,000f. A resolution to continue the works was come to.

The events in Sicily and Naples, and the belief that the new phase into which the Eastern question is entering is full of difficulty, have had a very depressing effect on the Bourse. To-day, business is suspended, this being Ascension-day. The quotations are as follow:—

	Thursday, May 10. f o	Wednesday, May 16. f o
Threes	70 80	68 85
Bank of France	2875 0	2810 0

Do. do. 500f, 3 —	...	447 50

Subjoined is an account of the markets:—

FLOUR at *Paris*, yesterday, was: choice, 58f to 59f the sack of 159 kilogs; inferior, 50f 50c to 60f; ordinary, 57f to 58f. Four marks, present month, 57f; June, 57f 50c to 57f 75c; July, 59f 25c to 59f 50c.

WHEAT at *Paris*, yesterday, declined, and business was not active. Choice was 35f to 35f 50c the sack of 120 kilogs; good, 34f to 34f 50c; ordinary, 32f 50c to 33f 50c. Of the provincial markets, 27 present a rise of from 10c to 50c the hectolitre; 110 a fall of from 5c to 1f.

COTTON.—At *Havre*, in the week ending Friday, the sales were 10,914 bales, and the arrivals 23,518. The quotations (deduction made of 12f per 50 kilogrammes, the amount of import duty struck off by the new law) were the same as in the previous week; low New Orleans being 88f, and very ordinary ditto 95f. On Monday and Tuesday low remained at 88f.

COFFEE.—At *Havre*, in the week ending Friday, a fair amount of business was done, and prices were maintained. 230 sacks Hayti Port-au-Prince, disposable, went at 82f the 50 kilogs in bond; 300 ditto, for delivery, same price; 125 sacks Gonaives, disposable, 84f; 300 Cape, for delivery, 83f 25c; 1,120 sacks Rio not washed, disposable, 75f to 77f; 3,300 sacks ditto, for delivery, 75f to 77f 50c; 210 washed, disposable, 87f to 88f; 326 Bahia, for delivery, 75f; a small lot of Reunion, disposable, 160f duty paid; 716 sacks Malabar triage, for delivery, 135f; and 1,000 Ceylon triage, for delivery, 130f. The arrivals exceeded 10,000 sacks. This week, Hayti Cape has been quoted at 83f to 84f; Hayti, 82f to 82f 50c; Gonaives, 85f; Rio, 77f; Ceylon triage, 133f; Costa Rica, 132f 50c. At *Bordeaux*, last week, some rather large sales were made. Costa Rica, at 2f 70c to 2f 80c the kilog duty paid; Malabar and Mysore, 2f 75c to 2f 84c; Java, 2f 80c to 2f 85c; Mocha, 3f 30c to 3f 40c; ditto triage, 3f 50c to 3f 60c; Ceylon native triage, 2f 66c to 2f 68c; ditto plantation, 2f 85c to 2f 95c. At *Nantes*, last week, 6,586 sacks Java were sold at 139f to 143f duty paid, and a small lot of Reunion at 145f. This week some Reunion has been disposed of.

SUGAR.—The demand at *Havre*, in the week ending Friday, was more active than in the preceding week. 312 hogsheads French West India went at 62f to 62f 50c duty paid; 107 ditto for delivery, 62f 50c; 88 ditto "usine," disposable, 62f 50c; 1,684 bales Reunion, 64f 50c; 1,600 ditto "gros grain," 69f duty paid; 1,600 casks Havana, 37f to 38f in bond. The arrivals were about 1,500 hogsheads French West India, and about 5,000 casks Havana. This week, French West India has been done at 62f 50c. At *Bordeaux*, last week, about 1,500 bales Reunion went at 63f 50c; and 286 sacks gros grain at 66f. In French West India nothing was done, but quotations were nominally 62f 50c to 63f 50c. At *Nantes*, last week, some large lots of Reunion went at 64f to 67f 50c; and some gros grain at 69f to 71f; French West India, common quality, 54f 37½c to 54f 75c; and ditto usine, 66f.

INDIGO.—At *Havre*, last week, nothing was done, and the sales this week have not been important. At *Bordeaux*, last week, 95 cases Bengal went at 2f 25c to 2f 35c, and 110 Kurpah and Madras at prices not stated. This week several sales have been made.

HIDES.—The demand at *Havre*, in the week ending Friday, was not very animated. 2,000 Buenos Ayres dry went at 152f 50c to 157f 50c the 50 kilogs duty paid; 1,530 Pernambuco drysalted, 107f; 300 Rio Janeiro salted, 69f; 930 Iceland salted cow, 52f 50c; 965 horse salted, 1f 5c the kilog. The arrivals were about 30,000. This week business has not been active.

Wool.—In all the transactions which took place at *Havre*, last Monday, purchasers were allowed all the benefit of the modifications in the import duties effected by the new law. 51 bales La Plata unwashed went at 1f 65c to 2f 90c the kilog; and 76 bales sheepskins, Buenos Ayres unwashed, at 1f 15c to 1f 65c. The arrivals exceeded 1,200 bales. This week, Buenos Ayres has been at 1f 60c to 1f 90c; ditto merino, 3f to 3f 25c; La Plata unwashed, at 1f 60c to 3f 25c.

Tallow.—At *Havre*, last week, there were no sales; nor have there been any this week. At *Paris*, yesterday, the 100 kilogs were 136f 70c.

Spirits.—At *Paris*, yesterday, 3-6 was 105f the hectolitre; Montpellier, 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f.

Brussels, May 16.

At a recent meeting of the shareholders of the Nouvelle Montagne Company, a dividend of 75f per share for 1859 was declared; payable, however, only on the 1st July and the 31st December next. The quantity of zinc and lead extracted in the course of the year was stated to be 3,343 tons.

Correspondence.

COTTON SUPPLY.

TO THE EDITOR OF THE ECONOMIST.

Sir,—It is very desirable that the present position of the prospects of supply and demand should be fairly understood. It may be questioned whether the supply of cotton now available is not more than sufficient for the requirements of the world, and no doubt a steady progressive increase will take place in the present sources of supply. The American crop of 1859-60 it is now certain will exceed 4,500,000 bales, and, before proceeding to further remarks, let us see what are now the known capabilities of supply existing:—

	bales.
America can give	4,500,000
India	650,000
Brazils, Egypt, &c., say	350,000
In all	5,500,000

While the extreme consumption of the world is say per week:—

	bales.
United Kingdom	46,000
Continent	30,000
United States	17,000
In all 93,000 bales per week, or per annum	4,836,000
Excess of supply	664,000

The position of stocks in Europe at the end of the current year will probably be about as follows:—

	bales.	
Stocks in Europe on 31st December, 1859, about		600,000
Total supplies from America in 1860 of 1859-60 crop	3,200,000	
Ditto 1860-61 crop	500,0 0	
East Indies	450,000	
Other places	350,000	
		4,500,000
Total available supply		5,100,000
Deduct consumption at 76,000 bales per week		3,952,000
Leaves a stock of		1,148,000

In the above estimate the figures representing supply admit of error only to a trifling extent, while the consumption is probably somewhat overstated. It is evident from them, however, that Europe is practically dependent upon America for the adequate supply of her cotton requirements. It has been represented in many quarters that the cultivation of cotton could not be greatly extended in the States, and urgent appeals have been made to the enterprise of the country to promote the growth in our own colonies and suitable localities. With respect to the capabilities of the United States, so far as regards land, they would appear to be illimitable, and so long as cotton continues to be the most remunerative crop that can be grown, fresh supplies of labour will be diverted to it from other cultivations.

The supplies from India must always be fluctuating, although, with remunerating prices, they would be largely increased; but the experience of the last year has shown that manufacturers will not use East India cotton, except at a great depreciation in value, when the supply of American is abundant. Notwithstanding the average price of American cotton was higher in 1859 than in 1858, the average price of East India was depreciated 1½d per lb, while the consumption fell off from 6,500 to 3,400 bales per week. The consequence has been a ruinous loss to importers, and a general discouragement to the prospects of the trade.

The Association make various suggestions for the advancement of cultivation of cotton in India. Much has already been done in the improvement of quality, and Indian cotton is now, as a whole, as free from seed leaf and impurities as can be desired. In the latter respect, it bears a favourable comparison with the large proportion of "sandy" cotton from America. The general range of price, however, in the English market has been but barely remunerative for some time, and the value of labour is so rapidly rising in India, that a higher range of prices for cotton can alone maintain the cultivation. At present the prospects held out to Indian-grown cotton are extreme difficulty of sale and ruinously depressed prices when the supplies from America are sufficient, with the chances of an active demand should any mishap befall the American crop.

—Yours, obediently,
E. J.

May 16, 1860.

COMMERCIAL AND MISCELLANEOUS NEWS.

A commercial report from Calcutta, dated the 7th ult., remarks:—The prices for which all produce is held deters purchasers; with the scarcity of tonnage, and the higher rates ruling, produce cannot be laid down in London at anything approaching to quoted value. Rice firm; silk in demand; piece goods less demand; hides less firm; oil seeds held firmly; jute less demand; shellac sought for; cutch lower. A general dulness has hung over the import market, and piece goods, owing to the unfavourable accounts from all the up-country markets, remained in limited demand at about former prices. Only few kinds of grey goods, suitable for the season, have been in fair demand, with a slight improvement in prices. Buyers do not feel inclined to operate freely, and they limit their purchases to their immediate wants. An active demand for European and local account has caused a considerable advance in the value of Government securities. The 5½ per Cents. have been sold at from 102-12 to 103, and the 5 per Cents. at 96. For the 4 per Cents. there is some inquiry at 83. Money is gradually becoming easier, but cannot be said to be abundant, either in the bazaar or with the banks.

The advices at hand by the last mail from the West Indies are uninteresting. In the value of produce scarcely any change had taken place.

The *Moniteur* has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month are added:—

	May, 1860. F	C		April, 1860. F	C
Debtor.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 16th day of May, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,227,655	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,752,655
		Silver Bullion	...
	29,227,655		29,227,655

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,728,943
Rest	3,271,422	Other Securities	20,266,040
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	7 585.343	Notes	7,622.590
Other Deposits	12,225,682	Gold and Silver Coin	774,695
Seven Day and other Bills	756,821		
	38,392,268		38,392,268

Dated the 17th May, 1860. W. MILLER, Deputy Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,361,888	Securities	29,916,983
Public Deposits	7,585,343	Coin and Bullion	15,527,350
Private Depoelts	12,225,682		
	42,172,911		45,444,333

The balance of Assets above Liabilities being 3,271,422*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£244,227
AN INCREASE of Public Deposits of	300,895
A DECREASE of Other Deposits of	382,587
No change in the amount of Government Securities.	
A DECREASE of Other Securities of	472,985
An INCREASE of Bullion of	154,024
An INCREASE of Rest of	6,958
An INCREASE of Reserve of	429,894

The amount of the decrease in the private securities being larger than the amount of the decrease in the deposits, the reserve has experienced a moderate increase. The coin and bullion have also slightly augmented.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,659,416	£ 19,968 955	£ 21,133,375	£ 22,167,842	£ 22,361,886
Public deposits	6,764,415	5,651,924	4,735,910	5,282 313	7,585,343
Other deposits	9,582,999	9 589,236	13,972,353	17,290,940	12,225,682
Government securities	14,292,170	10,329,041	10,526,563	11,281,376	9,728,943
Other securities	9,746,392	18,445,666	14,676,707	19,558,132	20,266,040
Reserve of notes & coin	11,162,555	5,083,684	12,119,050	10,281,678	8,397,285
Coin and bullion	16,631,080	9,853,609	17,926,980	17,195,968	15,527,350
Bank rate of discount	2½ p. c.	6½ p. c.	3 p. c.	4½ p. c.	4½ p. c.
Price of Consols	95¼	94	97⅞	91⅛	94⅜
Average price of wheat	39s 7d	57s 5d	44s 11d	52s 2d	52s 6d
Exchange on Paris (shrt)	25 70 85	25 30	25 5 10	25 5 10	25 10 17½
— Amsterdam ditto	12 3½ 4	11 18	11 15	11 11 12	11 14½ 15
— Hamburg (3months)	13 13	13 8½ 0	13 6½ 7	13 3 5½	13 5½ 5⅝

At the corresponding period of the year 1850, a great sensation had been occasioned by the announcement that in consequence of the failure of the good offices of France in the Anglo-Greek quarrel, she had demanded explanations from the English Government, and that those explanations being, as the Prince President's Ministers declared in the Assembly, "not such as France had a right to expect," the French Ambassador had been recalled from London. The French funds immediately fell 2 per cent., and Consols 1 per cent.

In 1857, strong reinforcements of troops were in course of despatch to India to quell the mutinous spirit of the Bengal native army. The money market was tight, gold being bought largely in this market for the Bank of France, whilst the drain of silver to the East was heavy.

In 1858, Lord Derby's Ministry was in a critical position. Money was extraordinarily abundant. The Bank of England had taken a million of Exchequer Bonds created in lieu of others paid off.

In 1859, the manœuvres of the opposing armies in the North of Italy attracted chief attention. Prussia had assumed an attitude of armed watchfulness, and the Prince Regent had expressed his determination to "maintain the basis of European public right and the balance of power in Europe." The Queen of England had issued a proclamation of neutrality. The subscriptions to the French loan of 20,800,000*l* had reached no less than 92,280,000*l*, of which 3,200,000*l* were for sums representing not more than 10f (say 8s) of annual interest. The total number of subscribers was 525,000. The pressure in the money market had died away, and the English funds were recovering, owing to the large investments by the public.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 163,393*l*; in 1857, a deficiency of 8,856,430*l*; in 1858, a deficiency of 704,354*l*; and in 1859, a deficiency of 2,267,192*l*. In 1860, the deficiency is 8,040,358*l*.

There is no alteration of importance in the money market. As the return given above shows, the commercial demand at the Bank of England has become light, and the bills discounted by that establishment during the pressure some weeks ago are running off. Yet throughout the week the terms in the open market have approximated closely to those of the Bank, the rates for the best bills not having been below 4¼ to 4⅜ per cent. Within the last two days the demand has revived, and little or no business was done to-day below 4⅜ to 4½ per cent. The applications at the Bank to-day were likewise considerable.

Money has been in active demand in the Stock Exchange, but the supply to-day was rather more liberal at 3½ to 4 per cent. on Government securities for short periods.

The arrivals of specie and bullion since the date of our last report have been extensive, comprising a total of nearly 700,000*l*, principally from Australia, the West Indies, and the United States. The improvement in the exchange at New York is causing a steady influx of specie from that quarter, which seems likely to continue. But for a partial revival in the demand for gold for exportation to the Continent, a much larger addition would have been made to the stock in the Bank.

The amount of gold sent into the Bank since the date of the return given above is only 8,000*l* sent in this day, but further considerable parcels are expected to be taken there, the amount still awaiting disposal in the market being considerable.

It is understood that, owing to the recent rise in the China exchanges, and the consequent increase in the demand for specie for that country, the Calcutta and China packet of the 20th inst. will take about 300,000*l*, principally silver.

The Omar Pasha, Southampton, and Dream, are the only vessels known to be on the way from Australia with gold; the total is 164,500*l*.

The exchanges on St Petersburg and Vienna exhibit the effect of the renewed political distrust, the former having fallen and the latter risen. The movement, in each instance, is in favour of this country. The other exchanges are firm.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs. Pixley, Abell, and Langley:—

Gold.—Some additional arrivals of gold have come to hand since the date of our last circular, comprising the White Star, from Melbourne, with 44,500*l*; Norwood, from Melbourne, with 38,000*l*; Jessie Boyle, from Melbourne, with 33,000*l*; Result, from Melbourne, with 162,640*l*; Shannon, from West Indies, with 38,000*l*; Hammonia, from New York, with 41,000*l*; Vanderbilt, from New York, with 142,000*l*; Athenian, from the West Coast of Africa, with 10,000*l*. Of these amounts, about 120,000*l* have been sent to the Bank; about 200,000*l* remain to be dealt with; and the balance has been purchased for exportation. In addition to the above, the City of Baltimore has brought about 100,000*l*, principally in gold; but this sum will not be in London until to-morrow. A considerable portion of the gold from America consists of Eagles, and we are therefore able to give a price for actual business, some large amounts having been sold to day at 76s 3½d per oz. About 215,000*l* is now on the way from Australia, and the next mail is expected to announce the sailing of several additional vessels for England with gold.

Silver.—The market for silver since our last circular of the 10th inst. has been tolerably active. The Shannon steamer, from the West Indies, brought 81,000*l*; this has been sold at 5s 1⅝d per oz. for the East, continental buyers being unable to give this price. The Sultan, from Lisbon, has brought 3,486*l*; and the La Plata (on the 17th inst.) takes 5,320*l* for the West Indies.

Mexican Dollars.—There have been considerable sales of Mexican dollars during the last week; and the price has risen from 62d to 62⅜d per oz. It is anticipated that the steamer of the 18th inst.

will take out rather a large amonnt for China. The Arago, from New York, has arrived with 10,000*l*; and several other remittances have also come to hand.

Exchange on Bombay and Calcutta for Bank drafts, at 60 days' sight, continues 2s to 2s 0¼d, with very little doing. Madras, nominal, 2s. Documented bills, 1s 11½d to ⅝.

India Government loan notes have shared the depression of all other securities, in consequence of the unsatisfactory aspect of continental politics; since our last quotations they have fallen a good 1 per cent. Immediately after delivery of the last letters from Calcutta the market became firm, and some sales took place at 104¼ for 5½ per Cents.; but we cannot quote them better to-day than nominal, at 102½ to 103½ for 5½ per Cents., and 97½ to 98 for 5 per Cents.

An instalment of 8 per cent. fell due on Tuesday on the Canada Loan of 2,800,000*l*. The next payment is of like amount, and due the 16th proximo, making 50 per cent. paid.

On Tuesday, a call of no less than 1,500,000*l* (2*l* per share) fell due on the shares of the South Austrian and Lombardo-Venetian Railway Company; but the majority of the payments had been effected in advance, and the great bulk of the shares are held abroad.

The prospectus of the Thames and Mersey Marine Insurance Company, to the preparation of which reference has been made in the last two numbers of the ECONOMIST, was published on Monday morning. The direction is one of the strongest ever brought before the public, comprising no less than thirty-two well-known commercial names. The interests of London, Manchester, and Liverpool are thus well represented and combined. The consequence has been a great rush for the shares. The London subscription list was closed yesterday morning, at 12 o'clock, the applications in this place alone having reached 240,000 shares, whilst the entire capital of the Company consists of only 100,000*l*. The lists in the provinces are, likewise, closed. It is evident that the majority of the applicants will receive only a small proportion of the amount applied for, and that many will be entirely disappointed. The shares opened on Monday morning at ¾ to 1 prem,, rose on Tuesday to 2 prem. "buyers," fell yesterday morning to 1 to 1¼ prem., rose again this afternoon to 2 prem., and closed at 1⅞ prem. The advance to-day was caused by the announcement that the Company have secured the services of Mr Henry Burnand, one of the most eminent underwriters of Lloyd's.

The applications for the shares in the London and South African Bank represented a total considerably larger than the amount to be allotted in this country (one-fourth of the capital being reserved for the colony), yet, under the influence of the depression generally prevailing in the Stock Exchange, the price has declined to ¼ dis to par.

The following important privileges have been granted by an Imperial ukase promulgated on the 8th inst., to the bondholders of the Three per Cent. Russian Sterling Loan of 1859, negotiated by Messrs Magnus and Thompson, Bonar and Co., viz.:—1. The bonds of the said loan are to be accepted by all departments of State as securities for contracts and supplies at the rate of 420 silver roubles for every 100*l* of stock (equivalent to about 63*l* per cent.). 2. The Imperial Commercial Bank and its branches are to accept the said bonds on discount, advancing at the rate of 340 silver roubles for every 100*l* of stock to the holders (equivalent to about 51*l* per cent.).

The Muswell Hill Land Company, which has issued its prospectus this week, is formed with a view to purchase the estate of 457 acres, on which it is proposed to build the Great Northern Palace. The capital of the Land Company is to be 140,000*l*. The sum to be paid for the property is 135,000*l*, of which 70,000*l* will be in paid-up shares.

To-morrow comes into operation the new rule, according to which the whole of the London banks will close at three o'clock on Saturday afternoons, instead of four, as hitherto. The rule will also be acted upon by the discount houses.

The Australian Mail service is once more about to be altered. The Peninsular and Oriental Steam Company find that they cannot make the service pay, at the present amount of the subsidy (180,000*l* a year), and they have therefore intimated to Government their intention of throwing up the contract. The monthly communication with Australia, however, is not to be discontinued, for the Company have submitted a new plan to the Government, entailing a total subsidy of only 120,000*l* a year. Upon this plan, it appears the Company intend to act, the colonial moiety of the subsidy having already been guaranteed by the colony of Victoria alone. The Company undertake to maintain a monthly service between Melbourne (only) and Point de Galle (Ceylon), in connection with one of the bi-monthly lines of postal steamers which now convey the India and China mails. At Point de Galle the Australian mails will be transferred to the Indian steamers. The only port between Melbourne and Point de Galle at which the Australian packets will touch will be King George's Sound, for coaling purposes. The conveyance of the Sydney, Adelaide, and other intercolonial mails to and from Melbourne must be performed by steamers chartered for the purpose by the several Colonial Governments, as the Peninsular and Oriental Company's packet, instead of making a tour of the colonies, will arrive at and sail from Melbourne alone. The principal remonstrance against the alteration will probably emanate from New South Wales and South Australia. It is intended that the new arrangement shall come into operation with the mail leaving Australia on the 22nd of July, and with the mail leaving England on the 20th—26th of June. Consequently, the June mail via Southampton will leave Engand on the 20th instead of the 12th, and the outward mail via Marseilles will go on the 26th instead of the 20th. Instructions to this effect have been sent out to the Company's agents in Australia by the mail of this day.

A further important fall has taken place on the Paris Bourse, which has been violently agitated. Distrust of the designs of Russia in Turkey and of the French Government in Italy, now that Garibaldi's expedition is fanning the embers of insurrection in all the Southern portion of that Peninsula, preoccupies the mind of the financial world. It is foreseen that any further development of French ambition in that quarter will probably arouse the active opposition of England. The 3 per Cent. Rentes, which closed on Friday last at 70.25, had fallen this morning to 68.55, and closed this afternoon at 68.80 for money, and 68.85 for the account. The fall established during the week consequently amounts to 1⅜ per cent.

The English funds have also shown much depression, though relatively far steadier than the French Rentes. The lowest point was touched yesterday, when Consols (which closed on Friday last at 95¼ to ⅜) descended to 94½ to ⅝ for the 6th of June. To-day more firmness was manifested, and the final quotations were 94½ to ⅝ for money, and 94¾ for the account. The fall since last week is ½ to ⅝ per cent. The decline would have been more considerable but for the approach of the Consols dividend period. The market will probably continue very sensitive to the advices from abroad. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

	Consols, Money.		Consols, Account.		Exchequer Bills.
	Lowest.	Highest.	Lowest.	Highest	
Saturday	94⅞	95⅛	95⅛	95⅝	6s pm 8s pm
Monday	94⅝	94⅞	94⅝	95⅛	4s pm 7s pm

A heavy fall has likewise occurred in British railway stocks, it being feared that the fair prospects of trade may be marred by the complications on the Continent. Speculative holders of stock have shown especial eagerness to realise, and as the Stock Exchange is in no condition to absorb large amounts, the pressure of sales was attended with an immediate effect upon prices. To-day's closing quotations, com

pared with those of last Friday, exhibit a fall of 2¾ per cent. in Lancashire and Yorkshire stock; 2½ per cent. in Great Northern, London and North-Western, and South-Eastern; 1¾ per cent. in Great Western, Midland, and Berwick; 1½ per cent. in Eastern Counties; 1¼ per cent. in York and North Midland, and Caledonian; 1 per cent. in London and South-Western, and North British, &c. The appearance of the market at the close of business to-day was decidedly steadier than yesterday, but much sensitiveness is still shown. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

	Closing prices last Friday.	Closing prices this day.
Railways.		
Bristol and Exeter	103 4	102 4
Caledonian	90⅜ 1¼	89½ 90
Eastern Counties	51 5	52½ 3½

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London as in Hamburg.

The Commercial Times.

ADDITIONAL MAILS FOR CARTHAGENA, NEW GRANADA.—In addition to the regular mails for Carthagena which are now forwarded by the West India packet leaving Southampton on the 2nd of each month, a mail for Carthagena will, in future, be made up for conveyance as far as Colon by the West India packet sailing from Southampton on the 17th of the month; it being understood that the communication between Colon and Carthagena by means of private ships is frequent, and that mails can be thus forwarded with tolerable certainty of reaching their destination during the fortnight in which there is no direct packet communication. Besides correspondence for the town of Carthagena, any letters, &c., for the interior of New Granada posted between the 2nd and 17th of the month will be sent in this additional mail.

MAILS FOR BRAZIL BY FRENCH PACKET FROM BORDEAUX.—Information has been received from the Director-General of the French Post Office of the establishment of a line of French packets to run once a month between Bordeaux and Rio de Janeiro, calling at Lisbon, St Vincent (Cape de Verds), Pernambuco, and Bahia. The first packet of this line is appointed to be despatched from Bordeaux on the 24th instant; after that date the packets will leave Bordeaux on the 25th of each month. To reach Bordeaux in due time for conveyance by these packets, letters, &c., must be despatched from London, at the latest, by the morning mail of the day before the packet is to sail. The following table shows the rates of postage to be paid upon letters, newspapers, and other printed papers intended for conveyance by the French packets :—

		Not exc. ½ oz.	Above ½ oz and not exc. ½ oz.	Above ½ oz and not exc. ¾ oz.	Above ¾ oz and not exc. 1 oz.	For each additional ½ oz.
		s d	s d	s d	s d	s d
Letters	To Portugal	0 6	1 0	1 6	2 0	0 6
	To Brazil or Cape de Verds	0 8	1 4	2 0	2 8	0 8

	Not exc. 4 oz.	Above 4 oz and not exc. ½ lb.	Above ½ lb and not exc. 1 lb.	Above 1 lb and not exc. 1½ lb.	For each additional ½ lb.
	s d	s d	s d	s d	s d
For a packet of British newspapers duly registered at the General Post Office for transmission abroad	0 1	0 2	0 4	0 6	0 2
For a packet of printed papers other than British newspapers duly registered at the General Post Office for transmission abroad	0 3	0 6	1 0	1 6	0 6

The above rates of postage must in all cases be paid in advance, or the letters, &c, cannot be forwarded. In the absence of any special address, the amount of postage paid upon letters, &c., for Brazil and the Cape de Verds will be regarded as an indication of choice of route on the part of the senders. Any letter, newspaper, or other printed paper, however, which may be sufficiently prepaid, will be forwarded by the first packet sailing, whether British or French. Letters, &c., for Portugal will be sent by the French packets from Bordeaux only when the address shall specify that they are to be so forwarded.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

At Mark lane, to-day, there was an improved feeling in the demand for both English and foreign wheat—the supplies of which were limited—at an advance on Monday's rates of 1s per quarter. Barley moved off freely, at extreme rates; but malt commanded very little attention. Oats were 6d per quarter dearer, and the value of all other articles was well supported. The week's imports from abroad are limited, viz., 4,860 quarters of wheat, 4,740 barley, 5,020 oats, 250 sacks and 340 barrels of flour.

There was an improved inquiry for wheat at Liverpool this morning, at 1d to 2d more money compared with Tuesday's rates.

We have received the annexed communication, dated the 3rd instant, from Messrs Briggs and Co., of Alexandria :—

The advices received from England by last mail produced for the moment an excited feeling in our grain markets, but this has gradually subsided. Indian corn, which underwent an advance of nearly 1s per quarter f.o.b., has now sunk beneath the quotation we gave by our last. Wheat and beans, however, are still in active demand. Barley continues excessively scarce, but some trifling lots of the new crop have commenced appearing in the market. The wheat and barley crops, now being reaped, promise exceedingly well. The crop of beans in Upper Egypt will be a full average, but in Lower Egypt, the plant, when in flower, suffered great injury from violent winds. The yield of Behera beans will, consequently, be very light, the crop in some districts being a total failure. The following are current rates :—Wheat—Saide, 36s 6d to 37s; ditto, Behera, 36s to 36s 6d : beans—Saide, new, 28s 9d to 29s 2d; ditto, ditto, old, 27s 8d to 29s; ditto Behera, 27s to 27s 8d: Indian corn, 26s to 27s; barley, 21s 10d to 23s per quarter; cotton seed, 4l 10s to 5l 1s per ton. Freights are somewhat firmer, say 4s to 4s 6d per quarter for beans to the United Kingdom for orders. To a direct port, 3s 6d to 3s 9d. Cotton to Liverpool, ¼d per lb. Grain to Liverpool by steamer 4s 6d per quarter. Exchange on London at three months' date steady, at 96½ piastres per £ sterling. Marseilles, 5.18f to 5.19f per dollar of T. P. 20.

The sales of the week in the Liverpool cotton market have amounted to 48,000 bales, including 35,000 bales to spinners, 3,000 bales on speculation, and 10,000 bales for export. Quotations remain unchanged since last Friday. To-day the market closes quiet: sales 7,000 bales. There has been much less activity during the past week in the market; spinners have been lately laying in large supplies, and seem now inclined to look on for a time, and await the chance of coming in on easier terms. Meantime plenty of fresh cotton is adding to the already large stock, so that there appears little chance of present rates being maintained. The American crop prospects continue very favourable, and political aspects are not at all cheering.

New Orleans advices to the 4th inst. state:—"Cotton quiet; sales to-day 5,000 bales at 10¼c to 11c for middling; sales of the week, 26,000 bales; receipts of the week, 12,500 bales, against 9,500 in same week last year; exports of the week, 66,000 bales; total this season, 1,934,000 bales; increased receipts at this port, 458,500 bales; ditto at all the ports, 767,000 bales; stock in port, 259,000 bales."

Messrs Briggs and Co., of Alexandria, whose letter is dated the 4th instant, observe:—

There is an increased demand for all sound descriptions of cotton for the Continent, but, day by day, they become rarer; the stock, computed at 7,000 bales, being of very inferior staple. The following are the sales effected since the 26th April, quoted per lb f.o.b.:—854 bales very ordinary to middling, 5.60d to 8.10d; 733 bales good middling to fair, 8.14d to 8.77d; 237 bales fully fair, 9d to 9 27d; 6 bales fine, 10.25d. Total, 1,830 bales. Freights by steamer, 5.16d with 5 per cent,; by ships, ¼d per lb in full. Exchange steady, at piastres 96¼ per £ sterling. Export of cotton in bales from 17th April to 2nd May, 1860:—Great Britain, 5,262; France, 815; Austria, 1,053; total, 7,130.

For most kinds of tea, but especially for medium qualities of congou, there has been a fair, but by no means active inquiry, at quite last week's currency. The show of samples has not increased.

The following report of the tea and silk markets is dated Hong Kong, March 30:—

Silk—Prices remain as last quoted. Tea—During the fortnight five chops have been settled. Arrivals have been 1 chop country tea, leaving a stock on the market of 6 chops. Prices have advanced 1½ tael to 2 taels for country congous, and fully 2 taels for Canton-packed black tea Masters of the new Tayshan congou are expected in about a fortnight; the crop is said to be a good one, and of fine quality. Settlements for the fortnight are:—Congou—Chops Oopacks at 29½ taels to 33 taels; Oonams, 25½ taels to 28 taels. Canton-packed Congou—4,000 half-chests, at 21 taels to 22½ taels. Scented Orange Pekoe—8,000 boxes, at 20 taels to 21½ taels for common. Scented Caper—10,000 boxes, at 14 taels to 19 taels for common spurious leaf to medium mixed leaf. Gunpowder—2,000 boxes, at 16 taels to 18 taels. Pouchong—3,000 half-chests, at 16½ taels to 18½ taels for America. One vessel has sailed from Macao for New York. There have been no departures for Great Britain. One vessel remains on the berth for London, and one for Liverpool. Freights are advancing, and 3*l* would be given to London. Foochow advices are to the 18th inst. Tea—During the fortnight only a small business has been done, owing to the very small quantity out of the present stock being available for the European market, and the extreme rates required by the teamen. Arrivals have been small and of very inferior quality, and only a few more chops of the commonest kinds are expected to close this season's supply. Settlements have been:—Congou, 4,100 chests at from 9 taels for "coarse dust" to 19.5 taels for "best middling," and 720 chests Ningchow at 22 taels. Stocks—Congou, 8,000 chests, of which about 6,000 chests are below "good common" grade; Oolong, 300 half-chests. Prices remain as last quoted. Shanghai advices are to the 23d inst. Silk—The alarm caused by the rebels in the silk districts has induced dealers to bring forward supplies more freely, but not to an extent to affect the season's export. Should the disturbances continue, they may have a considerable effect on the new crop, which the Chinese will be preparing in about a month. Settlements have been 2,500 bales. Prices are unaltered. Stock about 4,000 bales. We quote:—Taatlee, No. 3, 420 to 425 taels; ditto, No. 4, 405 to 410 taels; ditto, inferior, 375 to 400 taels; Tayeaam, No. 3, 350 taels; ditto, No. 4, 335 taels; ditto, inferior, 320 to 330 taels. Total export of silk from China to Europe is 56,140 bales, against 64,325 bales, or a decrease for this season of 8,185 bales. Tea—Only a very limited business has been done during the past fortnight, and settlements are almost entirely confined to common and low kinds, for which a small advance has been obtained. Purchases are as follows, a great portion of which are contract receipts:—Congou—Ningchow, 5,600 chests, 27 to 32½ taels duty paid; Sunchunkf and Hohow, 4,500 chests, 20 to 24 taels duty paid; Shanghai, packed, 4,500 chests, 15 to 19 taels duty paid. Pekoe—100 chests at 28 taels. Green teas have been in little demand. Sales are reported of 10,500 half-chests. Stocks consisted of 8,000 chests of black and 14,000 half-chests of green. Two vessels have sailed for London, and three remain on the berth for the same port. For New York, one vessel was loaded, but tea formed only a small part of her cargo, and one remains on the berth. Freights, 1*l* 10s to 2*l* for tea, and 3*l* 10s for silk to London. To New York, 8 dols for tea. Total export of tea from China to Great Britain is 71,235,300 lbs, against, to same time last year, 49,252,500 lbs, or an increase of 21,982,800 lbs for this season. To the United States, the export is 29,167,500 lbs, against 25,673,300 lbs last year, or an increase for 1859-60 of 3,494,200 lbs.

The raw sugar market has been in a most inactive state, and the quotations have given way fully 6d per cwt. Refined goods have moved off slowly, at barely previous rates. In floating cargoes the transactions have continued on a very moderate scale.

There has been only a limited inquiry for nearly all kinds of coffee, and prices have shown a drooping tendency.

The annexed report of the coffee trade at Ceylon to the 14th ult., has been forwarded by Messrs Volkart Brothers:—

Unsettled weather and a scarcity of tonnage in our roads have somewhat checked shipments since our last. Our coffee exports to date are, nevertheless, almost equal to those of same time last year:—

PLANTATION COFFEE.

To Great Britain .....cwts	244,013	against last year, cwts		209,609
Foreign Ports	16,859	—	—	25,893
Australia and India.....	6,499	—	—	6,944
	267,371			242,446

NATIVE COFFEE.

To Great Britain.....cwts	64,532	against last year, cwts		38,736
Foreign Ports.....	54,064	—	—	98,565
Australia and India.....	2,035	—	—	10,887
	120,631			148,188

Plantation coffee, low, 11s 3d; ditto, mountain, 11s 6d to 11s 9d per bhl: native coffee, unpicked, 41s; ditto, picked and dried, 44s per cwt. Our market has continued comparatively bare of native coffee, none but small parcels finding their way in: the value of these have been fully maintained. The new Badulla crop is arriving slowly in Kandy, but the purchases of the fortnight have been very limited. There appears to have been nothing done in plantation coffee since the date of our last report. The receipts of parchment from the interior have been on a liberal scale, whilst the accounts of the recent blossom are generally encouraging, though more rain is wanted.

Cocoa has receded 2s per cwt, and the business doing in it has been limited.

We have no quotable change to notice in the value of rice, in which article, however, very little has been passing.

The result of the indigo sales is thus reported by Messrs Layton, Hulbert, and Co.:—

The quarterly sales of indigo, which commenced on the 8th inst. and terminated on Tuesday, comprised 8,820 chests, 1,022 of which were in the B catalogue. During the progress of the sale, 3,249 chests were withdrawn, leaving 2,691 chests Bengal, Benares, &c., 70 chests Oudes, 980 chests Madras, and 1,830 chests Kurpah; total, 5,571 chests. The intelligence received from Bengal, during the last three months, respecting the objections on the part of the natives to sow indigo in the lower provinces, caused some speculative inquiries in this market previous to the sale, and a few hundred chests changed hands at the rates of February to 2d to 3d advance. The trade, however, showed little disposition to depart from that system of cautious abstinence which they have pursued since the commencement of the Italian war. It is alone to the distrust engendered throughout the Continent by the ambiguous policy of the French Emperor that we can attribute the prostration and inactivity o the export trade in indigo, prolonged from month to month, while the stocks in every port of Europe have been reduced to a scale of the narrowest dimensions—the result of several short crops. There was but a thin attendance of buyers, either from our home districts or the Continent, and there were but few orders from Russia; many of the finer marks of Bengal were therefore withdrawn, and others realised the prices of February; broken and defective qualities, when soft and showy, from their scarcity, sold very readily at an advance of 2d to 4d per lb, but the close dark kinds required support to maintain former rates, and ordinary consumers and Oudes declined 2d to 3d per lb. Good Kurpahs sold steadily; the inferior ones at 2d decline. Good dry-leaf Madras brought previous rates, and ordinary kinds fell 2d per lb. Prices may be quoted as under:—Bengal—Fine blue, 8s 6d to 8s 8d; fine purple and violet, 8s to 8s 5d; good purple and violet, 7s 8d to 7s 11d; middling and defective, 7s 3d to 7s 7d; consuming, fine, 7s to 7s 4d; do. good, 6s 6d to 6s 11d; do. middling, 6s to 6s 5d; do. ordinary, 5s to 5s 9d; do. ordinary and lean, 2s 2d to 4s 9d: Oude—Good, 5s to 5s 9d; middling, 3s 9d to 4s 9d; ordinary, 2s 6d to 3s 6d: Madras—Velore, 4s to 4s 10d; middling, 3s to 3s 10d; ordinary, 1s 9d to 2s 9d: Kurpah—Fine, 6s 9d to 7s 5d; good, 5s 9d to 6s 6d; middling, 4s 2d to 5s 6d; ordinary and low, 1s 8d to 4s per lb. The quantity sold, including several of the withdrawn parcels disposed of before and during the sale, is 4,000 chests, of which about 1,800 are Kurpah and Madras. It is estimated that 2,700 are taken for export, 800 for home use, and 500 for speculation. 1,750 chests remain bought in.

Messrs Moran and Co., of Calcutta, report the state of the indigo market to the 7th of April as follows:—

As regards the total outturn of last year's crop, having now obtained the whole of the European factory invoices, we find them agree with our estimate of the 8th September last within 200 maunds, and we believe the native portion of the crop will also prove to have been correctly estimated, but this cannot be ascertained to a point for some time as there are yet some lots to arrive. The disaffection among the indigo ryots has somewhat subsided. Exports of indigo from the 1st November, 1859, to the evening of the 6th March, 1860:—To Great Britain 18,874, Havre and Bordeaux 4,880, Foreign Europe 64, America 1,290, Gulf, &c., 1,721, sundry ports, 2; total, 26,831 chests. With regard to the new crop, the latest letters to hand state that rain is wanted for the sowings and to refresh the October plant, which is beginning to show the effects of nearly six months' drought.

The public sales of Colonial wool continue to be well attended, both by home and foreign buyers, and the biddings for all kinds are still active, at quite last week's quotations. Hemp has produced rather more money, but the inquiry for flax has been much restricted.

According to a circular of Messrs Arles Dufour and Co., of Lyons, the general position of the silk trade during the past month has but slightly improved. Orders for the United States, as well

as for European consumption, although very limited, have created a certain activity, and prevented a further decline in French and Italian silk; but in consequence of the fall in London, China descriptions have been somewhat lower, and several transactions have taken place, particularly in Tsatlees. The accounts thus far of the prospects of coming silk crops are, on the whole, more favourable than for several seasons past; but, with the exception of Spain, where the worm has reached the fourth stage, it is yet too early to speak with perfect confidence.

DELIVERIES of SILK through the LYONS CONDITION HOUSE.
